I owe a huge thanks to Robert Beezer for recommending PreTeXt (formerly “MathBook XML”) as a means to author *Music Theory for the 21st-Century Classroom*. His work creating the “world” of PreTeXt made it easier than I could have imagined to create this text in all its forms (online, PDF, and print).

Also of incredible value, and without whom this text would not exist, is Jahrme Risner, who helped me wrap my head around the nitty gritty of PreTeXt and patiently coached me through entering commands in the terminal.

I wish to thank my colleague, Gwynne Kuhner Brown, for co-piloting the use of this text at the University of Puget Sound and for suggesting extremely helpful clarifications and corrections.

Finally, I must thank my wife, Dawn Padula, Director of Vocal Studies at the University of Puget Sound and musician extraordinaire, for entertaining my endless questions about my choices for musical examples and the clarity of explanations and diagrams.

Preface

Music Theory for the 21st-Century Classroom is an openly-licensed online four-semester college music theory textbook. This text differs from other music theory textbooks by focusing less on four-part (SATB) voiceleading and more on relating harmony to the phrase. Also, in traditional music theory textbooks, there is little emphasis on motivic analysis and analysis of melodic units smaller than the phrase. In my opinion, this led to students having difficulty with creating melodies, since the training they are given is typically to write a “melody” in quarter notes in the soprano voice of part writing exercises. When the assignments in those texts ask students to do more than this, the majority of the students struggle to create a melody with continuity and with appropriate placement of harmonies within a phrase because the text had not prepared them to do so.

In *Music Theory for the 21st-Century Classroom*, students learn about motive, fragment, phrase, and subphrase, as well as types of melodic alteration like inversion, intervallic change, augmentation, diminution, rhythmic change, ornamentation, extension, and retrograde. By understanding motive and subphrase (also known as “phrase segment” or “phrase member”), I believe students will better understand the logic and construction of melodies, which will aid them in creating their own music.

This text is meant to take the student from the basics of reading and writing pitches and rhythms through twelve-tone technique and minimalism over the course of four semesters. Whenever possible, examples from popular music and music from film and musical theater are included to illustrate melodic and harmonic concepts, usually within the context of the phrase.

Performances of notated examples are linked to legal, copyrighted YouTube videos with the start and stop time embedded to prevent the instructor the need to search for the passage. The online nature of the text allows links between related concepts (including the index) as well as to relevant pages on the internet.

While I have considered creating a unique curriculum for the theory program at my university since 2001, the impetus to create an online music theory textbook that could be of use not only to my students but to students at other colleges came from reading “[Transforming Music Study from its Foundations: A Manifesto for Progressive Change in the Undergraduate Preparation of Music Majors](#)” by the College Music Society’s Task Force on the Undergraduate Music Major.

The ideas in “the Manifesto,” as it is often called—that colleges need to train students to be composer-performer-improvisers (and I would add “arrangers”) like Bach and Beethoven as well as Charlie Parker and Jimmy Page—resonated with my musical experience growing up, which included writing, arranging, and playing popular music on electric guitar, electric bass,

keyboards, and drumset in high school—both in my uncle’s home recording studio and with a garage band I formed. It also resonated with my experiences playing jazz and fusion as a professional bassist ever since I was in college, a situation where the majority of the basslines I play are improvised from lead-sheet symbols.

My Ph.D. is in composition with a supporting area in music theory. I teach students to write motets and fugues in the upper-division counterpoint class. I believe in compositional craft. I also acknowledge that there are many things one can value in music, including lyrics, groove, production, texture, emotion, harmony, virtuosity, and intellect, to name a few. In this textbook I try to cover as many as possible of these items that relate to how music is made and how understanding can enrich one’s experience.

Chapter 1

Basic Concepts

1.1 Pitch

Pitch has to do with notes. On the piano there are 88 notes. As you move to the right on a piano, the notes sound higher. Notes sound lower as you move to the left. Try it on a piano with a smaller range at [the following website](#).

1.2 Notation

Notes are written on a five-line **staff**. A **clef** orients the lines to a reference point. For example, the G clef, when placed on a five-line staff, becomes the **treble clef**, the most well known clef. In treble clef, the notes on the lines are E–G–B–D–F from lowest to highest, often remembered through the traditional mnemonic “Every Good Boy Does Fine.” The spaces are F–A–C–E from lowest to highest. Staves (the plural of “staff” in musical terminology is “staves”) are extended by the **ledger lines**.

The F clef, when placed on a five-line staff with the dots surrounding the second line from the top, creates the **bass clef**. See the example for the names of lines and spaces, and for mnemonics to remember them.

1.3 Octave Registers

The note names used in music are ABCDEFG (known as the “musical alphabet”). After G, the note A returns and ABCDEFG occurs again and again.

The distance from the first A to the second A is an octave (which means the notes are eight steps apart.)

A	B	C	D	E	F	G	A
1	2	3	4	5	6	7	8 (octave)

The distance from any note to a note of the same name in the next register above or below is called an **octave** (abbreviated “**8ve**”).

How can the piano keyboard have 88 notes when there are only seven note names? The musical alphabet repeats 7 times (with an extra ABC at the top), which means we have at least seven octave registers. (There are also five chromatic notes in each register, which we will learn about when we discuss [Accidentals](#).) When learning about octave registers, we will focus on the note C for reasons that will soon become clear when we learn about the major scale.

We use **octave registers** (C_4 , D_5 , etc.) to specify the exact register of a note. The note C_4 is known as “**middle C**” and is an important reference point. See the keyboard in the example below.

Note that *the register number changes after the note B* each time (B_4 is followed by C_5).

In treble clef, middle C is notated on the ledger line below the staff. In bass clef, middle C is notated on the ledger line above the staff.

Figure 1.3.1 Middle C (C_4) in treble clef and bass clef

The other two commonly used clefs are **alto clef** and **tenor clef**. Each use a C clef that, when placed on a staff, designate the placement of middle C.

Figure 1.3.2 Middle C in alto clef and tenor clef

The **grand staff**, which is a treble and bass clef joined together by a bracket, is how piano music is written.

Note that middle C is always clearly notated in either the upper or lower staff and never floats between the two staves.

1.4 Accidentals

There are five types of accidentals; **accidentals** are characters that can be placed before notes to raise or lower them.

- The **sharp** symbol— \sharp —raises a pitch a half step.
- The **flat** symbol— \flat —lowers a pitch a [half step](#).
- The **double sharp** symbol— $\sharp\sharp$ —raises a pitch two half steps, or a [whole step](#).
- The **double flat** symbol— $\flat\flat$ —lowers a pitch two half steps, or a whole step.
- The **natural** symbol— \natural —cancels out any other accidentals that may have occurred earlier in a measure or in [Major Key Signatures](#) or [Minor Key Signatures](#).

Figure 1.4.1

1.5 Enharmonic Notes

Observe that C^\sharp and D^\flat are the same note on the piano but are written as different notes on the staff.

Figure 1.5.1

This occurs with all the black keys on the piano ($C^\sharp=D^\flat$, $D^\sharp=E^\flat$, $F^\sharp=G^\flat$, $G^\sharp=A^\flat$, $A^\sharp=B^\flat$). When two notes *sound* the same but are written as two

different notes on the staff, the written notes are said to be **enharmonic**. Notes on the white keys of the piano can be written enharmonically as well ($C=B^\sharp$, $E=F^\flat$, $D=C^\sharp$, etc.).

1.6 Practice Exercises

- For each note on the piano keyboard, specify the note name and octave register.

- For each note on the staff, specify the note name and octave register.

- Provide two enharmonically equivalent notes for each given note.

Chapter 2

Major Scales and Key Signatures

2.1 Half Steps and Whole Steps

A half step on a piano keyboard is the distance from one note to the next nearest note. A whole step is made of two half steps.

2.2 The Major Scale

A major scale contains a specific succession of whole and half steps. It is helpful to think of the pattern as consisting of two tetrachords. (A **tetrachord** is a four-note scale segment.) The lower tetrachord consists of the pattern whole step, whole step, half step. A whole step joins the lower tetrachord to the upper tetrachord. The upper tetrachord duplicates the pattern in the lower one: whole step, whole step, half step. If we use W for whole step and H for half step, the major scale pattern is W-W-H, Whole-step connection, W-W-H.

Figure 2.2.1 The D major scale on a keyboard

Figure 2.2.2 The D major scale in treble clef

All major scales use the notes of the musical alphabet in order; no notes are skipped and no notes occur twice. In the example above, the first four notes are D–E–F[#]–G, not D–E–G^b–G. In D–E–G^b–G, G erroneously occurs twice and the F[#] between E and G is skipped.

2.3 Major Key Signatures

A key signature is placed at the beginning of a piece (or the beginning of a section) and is written with the clef on the beginning of each line of music. The **key signature** reminds the performer which sharps or flats are in the scale (or key) of the piece and prevents the composer or arranger from writing every sharp or flat from the scale every time it occurs.

Figure 2.3.1 "Twinkle, Twinkle, Little Star" in D major

There are 15 major key signatures. The key of C major has no sharps or flats in the key signature. The other key signatures can have between 1 to 7 sharps and 1 to 7 flats, giving us the other 14 key signatures.

Figure 2.3.2 Major Key Signatures using Sharps

Figure 2.3.3 Major Key Signatures using Flats

It is important to memorize the order of sharps and flats, since you will be writing key signatures regularly.

The **order of sharps** is F–C–G–D–A–E–B, often remembered by a mnemonic. One common mnemonic for the order of sharps is “Fast Cars Go Dangerously Around Every Bend.”

The **order of flats** is B–E–A–D–G–C–F. It is the reverse of the order of sharps. It is easy to remember since the first four letters make the word BEAD, and GCF is something most students learn as “Greatest Common Factor” when studying math in elementary school.

A mnemonic that works forward and backward is “Father Charles Goes Down And Ends Battle,” which reversed is “Battle Ends And Down Goes Charles’ Father.”

A helpful learning device to remember the order of keys in relation to the order of sharps and flats is the **circle of fifths**. As you ascend in fifths (clockwise), key signatures get one degree “sharper.” (C to G is a fifth because C=1, D=2, E=3, F=4, and G=5.) As you descend in fifths (counterclockwise), key signatures get one degree “flatter.”

Figure 2.3.4 Circle of Fifths for Major Keys

Note the overlapping keys at the bottom of the circle. B major is enharmonically the same as C[♭] major, F[♯] major is enharmonically the same as G[♭] major, and C[♯] major is enharmonically the same as D[♭] major.

2.3.1 Identifying Key Signatures

While it is preferable to memorize key signatures, use the following method to determine major key signatures based on the sharps or flats in the key signature.

1. *For key signatures with sharps:* Go up a halfstep from the last sharp to find the key.
2. *For key signatures with flats:* The second-to-last flat is the key.

2.4 Practice Exercises

1. Using the WWHWWWH pattern, write the specified major scales without using key signatures.

D \flat major scale

A major scale

2. Given the key signature, specify the major key.

3. Write the major key signature for each key given. Be sure to use the correct order for sharps and flats.

1. A major

2. B \flat major

3. F \sharp major

4. D \flat major

5. D major

6. C \flat major

7. E \flat major

8. B major

9. F major

10. C \sharp major

Chapter 3

Minor Scales and Key Signatures

3.1 Minor Scales

There are three minor scales: the **natural minor** scale, the **harmonic minor** scale, and the **melodic minor** scale. Play or sing through each one and notice the differences.

The melodic minor scale has an ascending version, shown above, and a descending version that is the same as the natural minor scale.

Melodic Minor scale

So far, we have looked at minor scales in relation to the major scale. However, we will typically encounter minor scales in music using minor key signatures.

3.2 Minor Key Signatures

Minor key signatures agree with the notes of the natural minor scale. Since the C natural minor scale had E^b, A^b, and B^b, the key signature of C minor has three flats, written in the order of flats—B^b, E^b, A^b.

Natural Minor scale written with major key signature

Natural Minor scale written with minor key signature

Therefore, a minor key signature will have three lowered notes—the 3rd, 6th, and 7th—in relation to the corresponding major key signature. We use the term **parallel minor** when referring to a minor scale that *has the same 1st scale degree* (in this case C) as the major. We say, “The parallel minor of E major is E minor,” and “The parallel major of F minor is F major.” One method of figuring out a minor key signature is to add three flats to the parallel major key signature. This is the same as subtracting three sharps.

Note on uppercase versus lowercase: When writing below the five-line staff to designate keys, we will use the shorthand of upper case for major (C) and lowercase for minor (c). When writing prose, we will use uppercase: C major and C minor.

We use the term **relative minor** when referring to a minor key that *has the same key signature* as a major key. For example, the relative minor of E^b major is C minor because both have three flats in the key signature. Conversely, one could say the relative major of C minor is E^b major. The relative major is three half steps *above* the relative minor.

Below are the minor key signatures.

Here are circle of fifths diagrams for both major and minor, for comparison.

Figure 3.2.1

Writing harmonic minor and melodic minor scales *when using minor key signatures* requires you to *raise* scale degrees.

Harmonic Minor scale: raise $\hat{7}$ in minor

Melodic Minor scale (ascending version): raise $\hat{6}$ and $\hat{7}$ in minor

Compositions in minor typically do not strictly use only one of the three minor scales, however. The three minor scales are distillations of composers' actual practice.

7 $\flat 6$ 7 $\flat 6$ 7 $\hat{6}$

YT: xp3zPzDnTEk

Figure 3.2.4 J.S. Bach, Well-Tempered Clavier, Book One, Fugue 2 in C Minor

3.3 Scale Degree Names

Scale degrees, though often referred to by numbers, also have names.

tonic	supertonic	mediant	subdominant	dominant	submediant	leading tone
$\hat{1}$	$\hat{2}$	$\hat{3}$	$\hat{4}$	$\hat{5}$	$\hat{6}$	$\hat{7}$

These names will be used throughout this text to refer to scale degrees, chords built on these scale degrees, and keys associated with these scale degrees.

Another way to understand why some scale degrees have “sub-” in their names is through the following example.

Notice that the *subtonic* is a whole step below the tonic, while the *leading tone* is only a half step below the tonic.

3.4 Practice Exercises

1. Specify the minor key for each key signature given.

2. Write the minor key signature and specified minor scale in each example.

3. Write the minor key signature for the given key in each example.

4. Specify the key from the scale degree name.

- _____ minor: A^b is the mediant
- _____ minor: D^b is the subtonic
- _____ major: B is the dominant
- _____ major: C is the submediant
- _____ minor: D^\sharp is the subdominant
- _____ major: B^b is the leading tone
- _____ minor: E^\sharp is the supertonic

Chapter 4

Basics of Rhythm

In relation to rhythm in music, we will discuss time signatures, durational symbols, meter, beat, pulse, tempo.

4.1 Time Signature

In a **time signature**, the top number of the time signature tells you “how many” and the bottom number tells you “of what.”

4.2 Durational Symbols

In the present day, the most common time signature is $\frac{4}{4}$ (also known as “common time”). It makes sense to introduce durational symbols in the context of $\frac{4}{4}$ because a whole note takes up a whole measure in $\frac{4}{4}$, a half note takes up half a measure of $\frac{4}{4}$, a quarter note takes up $\frac{1}{4}$ of a measure, and so on.

Figure 4.2.1

Here are durational symbols for rests.

To put this information into practice, listen to the durational values double in speed in each measure of the following example.

eighth notes are twice as fast as quarter notes sixteenth notes are twice as fast as eighth notes

this pattern of 8 notes takes 8 beats

sixteenth notes are four times faster than quarter notes

32nd notes are twice as fast as sixteenth notes (there are eight 32nd notes for each quarter note)

this is another way of notating 32nd notes, showing 4+4

this pattern of 8 notes takes 1 beat

Two rare durational values are the double whole note (also called a “breve”) and the 64th note, which is twice as fast as a 32nd note.

two ways of notating the double whole note (or breve) double whole rest 64th notes 64th rest

4.3 Dots and Ties

We have a whole note, which lasts for four beats, and a half note, which lasts for two beats, but we don’t have a durational value that lasts three beats. To do so requires using a dot or a tie.

A **tie** links two notes together to create a new duration. Ties occur between notes of the same pitch. A **slur**, which looks like a tie, is placed over or under notes of different pitches and means to play them in a connected manner.

A **dot** added to a note increases the duration of that note by half. A second dot represents half the value of the first dot, or a quarter of the original duration. (These are known as “double-dotted notes.”)

tie joins notes together to create a new duration

dot equals half of the note's duration

second dot equals half of the first dot's duration

slur means to play with no audible gap between the notes

4.4 Meter

Meter describes the number of beats in a measure (also know as a “bar”) and how the beats are normally divided.

Beat is "[t]he basic pulse underlying measured music and thus the unit by which musical time is reckoned..." according to Barry Kernfeld in *The New Grove Dictionary of Jazz*, 2nd edition. **Pulse** and beat are synonymous.

Tempo refers to the speed of the beat or pulse. Tempo can be referred to in **beats per minute (bpm)**, such as 60bpm (where the rate of the beat would be equal to a second), or, in Classical music, with terms like Allegro, Andante, and Adagio, sometimes in combinations with "**M.M.**" for **Maelzel's Metronome**.

Meters with two beats in a bar are described as *duple*. If there are three beats in a bar, the meter is described as *triple*, and if there are four beats in a bar, the meter is described as *quadruple*.

If the beats are normally divided into two parts, the meter is described as **simple**. If the beats are normally divided into three parts, the meter is described as **compound**.

The time signature $\frac{2}{8}$ is "simple duple meter." The time signature $\frac{3}{8}$ is "simple triple meter." Finally, $\frac{4}{8}$ is "simple quadruple meter."

When describing meter, we say how the beat is divided before the number of beats in the measure.

$$\text{Meter} = \frac{\text{("simple" or "compound")}}{\text{(how the beat is divided)}} \frac{\text{("duple," "triple," or "quadruple")}}{\text{(the number of beats)}}$$

With compound meters the bottom number specifies *the division of the beat*. The beat value is a dotted note. We say $\frac{6}{16}$ is "compound duple meter" because it has two beats. The time signature $\frac{9}{8}$ is also compound duple. Compound time signatures have a top number greater than four that is divisible by 3 (6, 9, 12).

The following table summarizes meter and time signatures.

Top number of time signature:	2	3	4	= Simple
Top number of time signature:	6	9	12	= Compound
Number of beats:	Duple	Triple	Quadruple	

4.5 Tuplets

Tuplet is a generic term that describes a grouping of notes that would not normally occur within a beat.

A quarter note naturally divides into two eighth notes or four sixteenth notes. A **triplet** is a grouping of three eighth notes that occurs within the span of the quarter note. A **quintuplet** would be a grouping of five sixteenth

notes to occur within the span of one quarter note. It is not uncommon to see quintuplets, sextuplets, and septuplets.

If you write a piece of music that naturally has a triplet division to the beat, you should use $\frac{6}{8}$, $\frac{9}{8}$ or $\frac{12}{8}$ depending on the number of beats in each measure.

Figure 4.5.1 Two measures that sound the same

In compound meter, a **duplet** is a grouping of two eighth notes to occur within the span of a dotted quarter note and a **quadruplet** is a grouping of four eighth notes to occur with the span of a dotted quarter note.

4.6 Common Rhythmic Notation Errors

The standard practice when notating rhythms is to use beaming to show where the beginning of each beat occurs.

Consider the following example:

It is difficult to discern where the downbeats are.

Here is the same rhythm correctly notated. The downbeats provide a reference point, matching the conductor's beat pattern or your tapping toe.

In compound meters like $\frac{6}{8}$, the beat is the dotted quarter.

incorrect rhythmic notation

correct rhythmic notation

The exception to this practice of “showing the beats” involves syncopation.

Syncopation occurs when notes on weak beats and on weak parts of beats are emphasized and nearby strong beats are deemphasized. Syncopation is common in popular music.

Strong beats are the first beat of each measure (in $\frac{2}{4}$ and $\frac{3}{4}$) and beats 1 and 3 in $\frac{4}{4}$. Syncopation *at the beat level* involves ties across those strong beats. Numbers in parentheses in the example below are beats that are obscured through syncopation.

Syncopation can also occur at the *division of the beat* level. Below are two syncopation figures that don’t show the beat but are acceptable because they are common and to write them out correctly involves more symbols (beamed eighths and ties) for the performer to comprehend.

exceptions to rhythmic notation rules

this “proper” rhythmic notation of the above syncopations is not required

An example of syncopation at the eighth-note level (the division of the beat) can be found in the following example from “Eleanor Rigby.”

El-ean-or Rig - by, ___ picks up the rice in the church ___ where her wed - ding has been, ___

without syncopation

El-ea-nor Rig - by picks up the rice in the church where her wed-ding has been, ___

Notice how syncopating notes gives them emphasis and creates a “pull” against the rhythm of the accompaniment.

4.7 Practice Exercises

- After listening to each example, specify the meter (e.g., “compound triple”).
 - Sousa, “Washington Post March”
 - The Beatles, “Eleanor Rigby”
 - Verdi, “La donna e mobile”
 - Third Day, “Morning Has Broken”
 - Latch featuring Sam Smith, “Disclosure”
- For each example, specify the implied time signature and the meter (e.g., “simple duple”).

Beethoven, Op. 110, III, mm. 124-125

a. Time Signature: ____ Meter: ____

Corelli, Op. 5, No. 1, mm. 12-15

b. Time Signature: ____ Meter: ____

Mozart, K. 283, III, mm. 187-190

c. Time Signature: ____ Meter: ____

Gervaise, "Pavane Passamaize" from *Sixième Livre de Danceries*, m. 7

d. Time Signature: ____ Meter: ____

3. Use one note value (with one or two dots as necessary) to show the sum of all the rhythmic values given.

Example

1.

2.

3.

4.

4. Correct the incorrect rhythmic notation in each example in order to show the beats. The subdivisions grouped into beats are shown in parentheses above the rhythms to be corrected.

Example

	Incorrect	Correct

Chapter 5

Intervals

5.1 Introduction to Intervals

Intervals are the building blocks of scales, chords (or harmonies), and melodies. **Intervals** are a measurement between two pitches, either vertically or horizontally. When measuring vertically, we refer to **harmonic intervals** because the two notes sound simultaneously. When measuring horizontally, we refer to **melodic intervals** because the notes occur one after the other.

measured horizontally = "melodic" interval

When you measure from the tonic up to each scale degree of a major scale, you find the following intervals:

All intervals in the example above are either “perfect” or “major.”

5.1.1 Numeric Size of Interval

There are two elements to naming intervals: the quality and the number (for example, “major sixth,” abbreviated as “M6”). Let us first focus on the numeric size of intervals.

Odd-numbered intervals will always be a line to a line or a space to a space.

Even-numbered intervals will always be a space to a line or a line to a space.

5.1.2 Interval Quality: Perfect versus Major/Minor

Intervals such as the unison, fourth, fifth, and octave can be classified as “**perfect**” but never “major” or “minor”. Conversely, the intervals of the second, third, sixth, and seventh can be **major** or minor but never perfect in quality.

Perfect Intervals: Unison, 4th, 5th, 8ve
Major or Minor Intervals: 2nd, 3rd, 6th, 7th

Perfect intervals are always natural to natural, sharp to sharp, and flat to flat except for the fourths and fifths between B and F, which involve B to F[#] and B^b to F.

Minor intervals are one half step smaller than major intervals.

5.2 How to Identify Perfect, Major, and Minor Intervals

Here are two methods for identifying intervals.

The first method involves thinking of the lower note of an interval as the tonic (the first note of the scale). Remember that all the notes above the tonic in a major scale are perfect or major. Determine if the upper note is in the major scale. If it is not, determine if the interval is a half step smaller than a major interval, in which case it is a minor interval.

Interval: m7

quality size
(P, M, m) (number)

think of lower note as tonic

both notes are on spaces, so count in odd numbers to determine the numeric size of the interval

key signature of F major

E \flat is not in the F major key signature, so the interval is not major

m7

M7

If the lower note of an interval has a sharp or flat on it, cover up the accidental, determine the interval, then factor the accidental back in.

Interval: ?7

cover sharp on lower note to think in G major instead of G \sharp

F \sharp is in G major, so this is a M7

raising G to G \sharp makes this a half step smaller, therefore it is a m7

The second method is to memorize how many half steps there are in each interval. To determine the size of an interval, count the number of half steps between the two notes then refer to your memory.

Number of half steps	Name of interval	Number of half steps	Name of interval
1	m2	7	P5
2	M2	8	m6
3	m3	9	M6
4	M3	10	m7
5	P4	11	M7
6	Tritone*	12	P8

* A “tritone” is a generic name for an augmented fourth (+4) or diminished fifth (\circ 5). These two intervals are enharmonic. [Augmented and Diminished Intervals](#) are discussed later in this chapter.

5.3 How to Write Perfect, Major, and Minor Intervals

To write an interval *above* a given note, use the two methods given below.

If you are asked to write a minor sixth above the note A, start with the A major scale and key signature. In A major, there is an F#, which is a major sixth above the note A. Therefore, F# is a minor sixth above A.

Alternatively, you can simply count the number of half steps. If you know there are 8 half steps in a minor sixth, you can count from A up to F.

Writing small intervals up to a major third *below* a given note is straightforward using a combination of whole and half steps. However, to write larger intervals below a given note, it is sometimes helpful to invert the interval first ([Inversion of Intervals Explained](#) is discussed in the next section).

5.4 Inversion of Intervals Explained

There are only two notes in an interval, one lower and one higher. To invert an interval, change the position of the notes so the note that was lower is now higher.

In the above example, a m6 inverts to a M3. This is true for all notes a M3 (or m6) away from each other. Below are examples of how intervals invert.

Note that the symbol ° represents “diminished” (one half step smaller than perfect or minor) and the symbol + represents “augmented” (one half step larger than perfect or major).

Below is a chart of how intervals invert.

How Intervals Invert

$$\begin{array}{ll}
 1 \longleftrightarrow 8 & M \longleftrightarrow m \\
 2 \longleftrightarrow 7 & P \longleftrightarrow P \\
 3 \longleftrightarrow 6 & + \longleftrightarrow \circ \\
 4 \longleftrightarrow 5 &
 \end{array}$$

To write a small interval *below* a given note, you should be able to combine whole steps and half steps up to the interval of a perfect fourth (two whole steps plus one half step). To write a larger interval below a given note, invert the interval size, determine the note *above*, then write it *below* the given note.

invert interval:
 m7 down = M2 up
 m7 down = ?
 M2 above E is F#
 m7 below = F#

5.5 Augmented and Diminished Intervals

Augmented intervals are one half step *larger* than perfect or major intervals and **diminished intervals** are one half step *smaller* than perfect or minor intervals.

Remember that perfect intervals (unisons, fourths, fifths, and octaves) can never be major or minor, and major and minor intervals (seconds, thirds, sixths, and sevenths) can never be perfect in quality. However, any size of interval can be augmented or diminished.

Here are musical examples illustrating the continuum of interval quality.

The image displays two rows of musical notation on a five-line staff, each with a treble clef. The first row shows three intervals of fourths: a diminished fourth (labeled °4), a perfect fourth (labeled P4), and an augmented fourth (labeled +4). The second row shows four intervals of thirds: a diminished third (labeled °3), a minor third (labeled m3), a major third (labeled M3), and an augmented third (labeled +3). Each interval is represented by two notes on the staff, with the quality and size labeled above and below the notes.

5.6 Practice Exercises

1. Specify only the number, not the quality, for each example.

Exercise 1 shows six pairs of notes on a five-line staff, each pair representing an interval. The intervals are: Ex. 3 (diminished fourth), 1. (perfect fourth), 2. (perfect fourth), 3. (perfect fourth), 4. (perfect fourth), and 5. (perfect fourth). The notes are written on a five-line staff with a treble clef.

2. Identify the interval quality and size for each example.

Exercise 2 shows six pairs of notes on a five-line staff, each pair representing an interval. The intervals are: 1. (diminished third), 2. (minor third), 3. (minor third), 4. (minor third), 5. (minor third), and 6. (minor third). The notes are written on a five-line staff with a treble clef.

3. Write the following intervals *above* the given note.

Exercise 3 shows six pairs of notes on a five-line staff, each pair representing an interval. The intervals are: 1. m6↑, 2. P4↑, 3. M3↑, 4. +6↑, 5. m7↑, and 6. m2↑. The notes are written on a five-line staff with a treble clef.

4. Write the following intervals *below* the given note.

Exercise 4 shows six pairs of notes on a five-line staff, each pair representing an interval. The intervals are: 1. °5↓, 2. m7↓, 3. P4↓, 4. M6↓, 5. m3↓, and 6. +2↓. The notes are written on a five-line staff with a treble clef.

Click [here](#) to download the homework.

Chapter 6

Triads

6.1 Introduction to Triads

A **triad** consists of three notes stacked in consecutive thirds. A triad is also called a **chord** as well as a **harmony**. (Harmony also refers to chord progressions.)

The lowest note of a triad when it is stacked in thirds is called the **root**. The middle note is the third and the highest note of the triad is the fifth. (We will discuss inversions of triads later.)

There are four qualities of triads—**augmented**, **major**, **minor**, and **diminished**.

Major and minor triads are common, diminished triads are less common, and augmented triads are rare.

6.2 Lead-Sheet Symbols

Lead-sheet symbols (also known as “lead-sheet notation” and “lead-sheet chord symbols”) are often used as shorthand for chords in popular music and jazz. These symbols allow a guitarist or pianist to choose how to “voice” the chords, i.e., how they want to arrange the notes.

C major triad in different voicings—all chords below contain only C, E, and G

Lead-sheet symbols for triads communicate the *root* and *quality* of a chord.

Lead-sheet Symbol	Chord Quality	Notes in the Chord
F	major	F–A–C
Gm	minor	G–B ^b –D
D [°]	diminished	D–F–A ^b
C+	augmented	C–E–G [#]

Here is a musical example with lead-sheet symbols and guitar tablature.

A

E

There ain't a rea - son you and me should be a - lone to - night

— yeah ba - by, night — yeah — ba - by, —

YT: jQ7BQuoRmbs

Figure 6.2.1 Germanotta, Garibay, Blair, “Edge of Glory”

As you can see in the example above, major triads are represented by an uppercase letter (A, E, and D) while minor triads are represented with the root in uppercase followed by a lowercase “m” (e.g., F[#]m). Diminished triads are represented by including the diminished symbol (°) after the chord root (e.g., C[°]) while augmented triads are represented by including the augmented symbol after the root (C+).

6.3 Inverted Triads

An **inverted triad** does not have the root as the lowest note. It is important to distinguish between *root* and *bass*. The root of a chord is the lowest note *when the notes are stacked in thirds*. The *bass* is the lowest note, which might be the root, third, or fifth.

A triad is in “**root position**” when the root is the lowest note, “**first inversion**” when the third of the chord is the lowest note, and “**second inversion**” when the fifth of the chord is the lowest note.

The image shows three triads on a grand staff (treble and bass clefs).
1. "root position": C major triad (C-E-G). The root C is the lowest note in the bass clef.
2. "first inversion": E major triad (E-G-C). The third of the chord, E, is the lowest note in the bass clef.
3. "second inversion": G major triad (G-B-A). The fifth of the chord, G, is the lowest note in the bass clef.
Arrows point from the labels "root of chord is lowest note", "third of chord is lowest note", and "fifth of chord is lowest note" to the respective lowest notes in each triad.

6.3.1 "Slash" Chords

In lead-sheet notation, an inverted chord has the triad before the slash (/) and the bass note after it. “C/E” means a C triad with an E as the lowest note. Therefore, a **slash chord** has a bass note that is not the root of the chord. In fact, it is possible to have slash chords where the bass note is not one of the chord tones (e.g., C/F#).

Remember, in a slash chord, *the first letter you see represents the root of the chord*. The letter *after* the slash is the *lowest note* (the bass).

Lead-sheet Symbol	Root of Chord	Notes in the Chord	Bass Note (Lowest Note)
F/A	F	F–A–C	A
Dm/A	D	D–F–A	A
G°/D ^b	G	G–B ^b –D ^b	D ^b
C+/G [#]	C	C–E–G [#]	G [#]

6.4 Analyzing Chords

When a three-note chord is represented by four or more notes (some of which are duplicates of the original three notes) and spread out across a grand staff, we can arrive at a lead-sheet symbol by answering three questions:

1. What is the root of the chord?
2. What is the quality of the chord (i.e., is the chord major, minor, diminished, or augmented)?
3. What is the bass note (i.e., is the chord inverted)?

To determine the root of the chord, write all the notes only on the lines of the staff in treble clef (you may need to use ledger lines).

You could also choose to write all the notes only on the spaces in a staff.

The bottom note is the root when the chord is stacked as a triad. In this case, the root is D.

Next, determine the quality of the triad (major, minor, diminished, or augmented) by analyzing if there is a M3 or m3 from the root to the 3rd, and if there is a M3 or m3 from the 3rd to 5th.

Since there is a m3 (3 half steps) from D to F and a M3 (4 half steps) from F to A, the triad is minor.

Finally, determine if the chord is inverted by checking to see if a note other than the root is the lowest note. Since the bass note (lowest note) is the root

D, the chord is not inverted. The chord is in root position, so the lead-sheet symbol is Dm.

Now, try the process again.

On scratch paper, stack the notes only on lines in the treble clef to determine the root.

The root is E.

Analyze the quality of the triad by measuring from E to G and from G to B^b.

It is an E diminished triad (E[°]).

Finally, determine if the chord is inverted. Is the root (E) the lowest note?

Since the lowest note is G, the chord is inverted. Our lead-sheet symbol is E[°]/G, which means we have an E[°] chord with a G in the bass.

6.5 Simple “Sus” Chords

Common in popular music are “sus” chords, with “sus” being a shortening of “suspended,” a term we will study in the chapter on [non-chord tones](#).

The two basic sus chords are the sus4 and sus2 chords. In the **sus4** chord (also labeled simply as “sus”), a perfect 4th replaces the 3rd of the chord. In the **sus2** chord (sometimes called “sus9”), a major 2nd replaces the 3rd of the chord. Both of these sus chords have a perfect 5th from the root to the fifth.

C Major	Csus4 (also Csus)	Csus2 (also Csus9)
 Fifth Third Root	 Fifth Fourth Root	 Fifth Second (or Ninth) Root

Here is a musical example with a sus4 chord.

The musical score for "Hard to Say I'm Sorry" features a sequence of chords: E, A/C#, B/D#, G#/B#, C#m, F#/A#, Bsus4, and B. The Bsus4 chord is highlighted with a box.

YT: PLtKoLkxDSQ

Figure 6.5.1 Cetera and Foster, “Hard to Say I’m Sorry”

Here is a musical example with a sus2 chord.

The musical score for "Love Song" features a sequence of chords: Gm, F/A, Bbsus2, C, Dm, C/E, F, and D/F#. The Bbsus2 chord is highlighted with a box.

YT: qi7Yh16dA0w

Figure 6.5.2 Bareilles, “Love Song”

We will not invert sus chords in this text. In a later chapter, there is [a section on more sophisticated sus chords](#) like C^9_{sus} and $C^7_{\text{sus}}(\flat 9)$.

6.6 Summary

Triad construction is summarized in the following table.

	Lower Interval	Upper Interval
Augmented:	M3	M3
	(4 half steps)	(4 half steps)
Major:	M3	m3
	(4 half steps)	(3 half steps)
Minor:	m3	M3
	(3 half steps)	(4 half steps)
Diminished:	m3	m3
	(3 half steps)	(3 half steps)
Sus2:	M2	P4
	(2 half steps)	(5 half steps)
Sus4:	P4	M2
	(5 half steps)	(2 half steps)

6.7 Practice Exercises

1. Analyze the triad types (M, m, +, °) using lead-sheet symbols. Sus2 and sus4 chords are also included.

Ex. $C^\sharp m$ 1. ____ 2. ____ 3. ____ 4. ____ 5. ____

2. Write the specified triads and sus chords.

1. Bm 2. E+ 3. A^bsus2 4. C[#] 5. Dsus4 6. F[°]

3. Analyze the following inverted triads using slash notation.

Ex. E^b/B^b 1. ____ 2. ____ 3. ____ 4. ____ 5. ____ 6. ____

4. Write the specified inverted triads.

Ex. Fm/C 1. G/D 2. Bm/D 3. D^b/F 4. E[°]/B^b

5. Correct the misspelled triads. Label your corrected spelling with lead-sheet notation. All of the examples are in root position (the lowest note is the root).

Incorrect Correct Incorrect Correct Incorrect Correct Incorrect Correct

Ex. Cm 1. ____ 2. ____ 3. ____

Click [here to download the Unit 1 Practice Test](#).

Chapter 7

Roman Numerals and Cadences

7.1 Roman Numeral Chord Symbols

Music is full of patterns that are similar from one piece to the next. As we saw with minor scales, we were able to use scale degree numbers to show the different patterns for harmonic, melodic, and natural minor, despite the fact that there are 15 minor key signatures. Using numbers instead of note names helps us see these patterns. Thinking of music in terms of numbers is also helpful with **transposition**, which means moving melodies and/or chord progressions from one key to another. Thinking of music in terms of numbers also helps us to analyze it and to spot similar patterns between many different pieces in different keys.

We will use Roman numerals to represent chords within a specified key. The Roman numeral “I” represents a triad built on $\hat{1}$, or the 1st note of the scale. Uppercase Roman numerals represent major triads and lowercase Roman numerals (e.g., “i”) represent minor triads. Uppercase Roman numerals with a “+” are augmented (e.g., “III+”), and lowercase Roman numerals with a “°” are diminished (e.g., “vii°”). (There is also the [Nashville Number System](#), which uses Arabic numbers for chords instead of Roman numerals.)

<i>Key</i>	<i>Lead-Sheet</i>	<i>Root</i>	<i>Scale Degree of Root</i>	<i>Roman Numeral</i>	<i>Notes in Chord</i>
G	Bm	B	$\hat{3}$	iii	B–D–F \sharp
f	G°	G	$\hat{2}$	ii°	G–B \flat –D \flat
c	E \flat	E \flat	$\hat{3}$	III	E \flat –G–B \flat

For inversion of Roman numerals, we will use a modified “slash chord” notation until we study Figured Bass later on. For now, we will write “I/3rd” if the 3rd of the I chord is the bass note, for example.

C: I/3rd

↙
the 3rd of the I chord
(C–E–G) is in the bass

G: ii/5th

↙
the 5th of the ii chord
(A–C–E) is in the bass

The following table offers more examples.

Key	Roman Num.	Root	Scale Deg. of Root	Notes in Chord	Bass Note
g	V/3rd	D	$\hat{5}$	D–F \sharp –A	F \sharp
a	iv/5th	D	$\hat{4}$	D–F–A	A
D	vii $^\circ$ /3rd	C \sharp	$\hat{7}$	C \sharp –E–G	E

7.2 Diatonic Chords in Major

Observe the pattern of diatonic chords in major represented by Roman numerals. (**Diatonic** means notes *within* a key signature and can be contrasted with the term “chromatic.”) One sees the pattern M–m–m–M–M–m– $^\circ$ in triad quality.

Lead-sheet symbols

C: I ii iii IV V vi vii $^\circ$

Roman numerals
(require key designation)

7.3 Diatonic Chords in Minor

Because there are three versions of the minor scale, there are more than seven diatonic chords in minor. The sixth and seventh scale degrees affect all of the triads except the tonic, making 13 possible diatonic triads in minor.

NATURAL MINOR

a: i ii $^\circ$ III iv v rare VI VII

HARMONIC MINOR

a: i ii $^\circ$ III+ rare iv V VI vii $^\circ$

MELODIC MINOR

a: i ii rare III+ rare IV rare V #vi $^\circ$ rare vii $^\circ$

However, when one analyzes a large amount of tonal music, one finds the following Roman numerals are most commonly used in minor.

Most Commonly Used Chords (Roman numerals) in Minor

The diagram shows a musical staff with a treble clef and a key signature of one flat (B-flat). The staff contains the following chords and Roman numerals:

- Am (i), B° (ii°), C (III), Dm (iv) — These are grouped in a box and labeled "from the natural minor scale".
- E (V) — Labeled "from the harmonic minor scale".
- F (VI), G (VII) — These are grouped in a box.
- G#° (vii°) — Labeled "and (vii°)".

The Roman numerals are written below the chords. The chords are represented by their constituent notes on the staff.

Notice that both VII (the “**subtonic triad**”) and vii° (the “**leading-tone triad**”) are included. The subtonic triad (VII), built on the lowered $\hat{7}$ that occurs in *natural* minor, regularly occurs in [circle of fifth progressions in minor](#) and [in rock and pop music](#), while the leading-tone triad (vii°), built on raised $\hat{7}$, is usually either a passing harmony or has [dominant function](#).

7.4 Cadences

We’ve been studying harmony—triads and chords. A **cadence** is a harmonic arrival point, a harmonic moment of stasis. A cadence can be compared to a comma or period in written language—the ear gets a moment to process a short passage of music, then the music continues. We will differentiate between four basic cadences now, adding [more specificity in a later chapter](#).

1. **Authentic Cadence (AC)**: a phrase ending with the chords V–I
2. **Plagal Cadence (PC)**: a phrase ending with the chords IV–I
3. **Deceptive Cadence (DC)**: a phrase ending with the chords V–vi
4. **Half Cadence (HC)**: a phrase ending on the V chord

7.4.1 Examples of Authentic Cadences

Chapter 8

Seventh Chords

8.1 Introduction to Seventh Chords

A **seventh chord** adds to a triad another note a third higher than the fifth. Chords, being built in thirds, have members that are odd numbers—third, fifth, seventh, and we will eventually discuss extensions of the ninth, eleventh, and thirteenth. The fifteenth would be the double octave, so chords only extend as high as the thirteenth.

root	third	fifth	seventh	ninth	eleventh	thirteenth
Rt	3rd	5th	7th	9th	11th	13th
				(this is for later)		

In classical and popular music, there are five types of seventh chords commonly encountered:

- the major seventh chord
- the major-minor seventh chord (also known as a dominant seventh chord)
- the minor seventh chord
- the half-diminished seventh chord
- the fully-diminished seventh chord (often called diminished seventh chord)

Full name:	major seventh	major-minor seventh	minor seventh	half-diminished seventh	fully-diminished seventh
Primary abbrev:	maj7	7	m7	ø7	o7
Other labels:	Maj7, Δ7, MM7	Mm7, Dom7	-7, mm7	m7(♭5), -7(-5), dm7	dim7, dd7

Figure 8.1.1

Another way to differentiate between the five types of seventh chords is by learning how the thirds are stacked in each one.

Lead-sheet symbols: Cmaj7 C7 Cm7 Cø7 Co7

In later chapters we will discuss other seventh chords built on augmented triads and minor triads.

8.2 The IV/5 “sus” chord

An additional four-note chord that sounds like and functions similar to a V^7 chord is the $IV/\hat{5}$ (or F/G in C major) chord. In popular music this chord often is substituted for the V^7 chord

F/G or $G^9_{\text{sus}4}$ *a variant: Dm^7/G*

Here is a musical example with the $IV/\hat{5}$ chord in A^b major.

"O-o-h Child" Stan Vincent

YT: gIsj8VxQNkw

Figure 8.2.1 Vincent, “O-o-h Child”

Another example of this chord is found in the opening to the Beatles’ “The Long and Winding Road”. In the key E^b major, the chord is A^b/B^b .

Figure 8.2.2 Beatles, “The Long and Winding Road”

8.3 Roman Numerals of Diatonic Seventh Chords

When notating seventh chords with Roman numerals, there are a few conventions to follow. An uppercase Roman numeral means a major triad and a lowercase Roman numeral means a minor triad. Adding “7” after a Roman numeral means there is a minor seventh between the root and seventh of the chord. Therefore, V^7 means a major triad with a minor seventh between the root and seventh and vi^7 means a minor triad and a minor seventh between the root and seventh. Add “M7” for a major seventh chord (e.g., IM^7). The half-diminished symbol ($^{\circ 7}$) means there is a diminished triad with a minor seventh from root to seventh. The diminished symbol ($^{\circ 7}$) on a seventh chord means the triad is diminished and the distance from the root to seventh is a diminished seventh.

Below are the diatonic seventh chords used in major and minor and their Roman numerals.

C: IM^7 ii^7 iii^7 IVM^7 V^7 vi^7 $vii^{\circ 7}$

a: i^7 $ii^{\circ 7}$ $III^{\circ 7}$ iv^7 V^7 $VI^{\circ 7}$ $vii^{\circ 7}$

8.4 Practice Exercises

1. Analyze the given chords with lead-sheet symbols above and Roman numerals below.

Ex. Eb: $vii^{\circ 7}/7th$ 1. g: _____ 2. D: _____ 3. c#: _____ 4. G: _____ 5. d: _____

2. Given the Roman numeral, provide the notes of the chord and the lead-sheet symbol above.

Ex. e: $IIIM^7/5th$ 1. A: ii^7 2. g: $ii^{\circ 7}$ 3. D: $vii^{\circ 7}$ 4. c: V^7 5. B: $IVM^7/3rd$

3. Analyze the harmonies in the excerpts with lead-sheet symbols above and Roman numerals below.

Chapter 9

Harmonic Progression and Harmonic Function

In this chapter we will look at common harmonic progressions and examine the principle of harmonic function that underlies progressions.

9.1 The Circle of Fifths Progression

The circle of fifths progression (I–IV–vii°–iii–vi–ii–V–I) was a stalwart of the Baroque era in music. You will find many examples of this progression in the music of Bach, Handel, and Vivaldi, especially in minor (i–iv–VII–III–VI–ii°–V–i) with the [subtonic VII](#).

YT: dHrvG0d6G20

Figure 9.1.1 J.S. Bach, Brandenburg Concerto No. 2 in F Major, BWV 1047, I.

YT: f6jvsEb-Usk

Figure 9.1.2 Handel, Suite in G minor, Passacaglia

This circle (the circle of fifths for *harmonic progression*) is different than the circle of fifths for key signatures because this circle of fifths for *harmonic progression* contains diatonic notes only. (The circle of fifths for key signatures (Figure 2.3.4) contained all 12 notes of the chromatic scale.)

Figure 9.1.3 Circle of Fifths for Harmonic Progression

The circle of fifths (for harmonic progression) is sometimes known as the “circle of *descending* fifths.”

Figure 9.1.4 Circle of descending fifths occurring diatonically on the staff

The circle of fifths progression has been used regularly since the Baroque era.

VI ii^{ø7} V⁷ i

YT: EgT_us6AsDg

Figure 9.1.9 Armato and James, I “Love You Like A Love Song” (2010s) (bass and chords only)

The circle of fifths progression has a feeling of inevitability about it because it consists of **harmonic sequences**. To understand harmonic sequence we will first look at melodic sequences, since the bass line is the “melody” in a harmonic sequence. Ask yourself what happens after this melodic idea:

ff

Figure 9.1.10 Beethoven, Symphony No. 5, Op. 67, I.

Therefore, a **sequence** is a musical idea repeated at a different pitch level.

Sequences can be short or long. For example, look at this familiar idea and notice how all four bars are sequenced down a step in the following four bars.

Figure 9.1.11 Mozart, Symphony No. 40, I.

Now look again at the bass line in “I Love You Like A Love Song” and notice how it can be thought of a two-note idea treated as a descending sequence.

Figure 9.1.12 “I Love You Like A Love Song” bass line sequence in groups of two notes

Sometimes we will hear a circle of fifths sequence where some of the chords are not in root position, as in the [Handel](#) and [Mozart](#) examples. In these two examples, we are hearing the sequence of the roots, even though they are not clearly presented in the bass.

YT: f6jvsEb-Usk

Figure 9.1.13 Handel Passacaglia with roots as open note heads

We will return to the idea of harmonic sequence later in this chapter.

9.2 Harmonic Rhythm

You will find that all of the progressions we discuss can have different harmonic rhythm. **Harmonic rhythm** is a term for how long each chord lasts. For example, in “Fly Me To The Moon” ([Figure 9.1.7](#)), “I Will Survive” ([Figure 9.1.8](#)), and “I Love You Like A Love Song” ([Figure 9.1.9](#)), each chord lasts for four beats and has whole-note harmonic rhythm. In the Mozart ([Figure 9.1.5](#)) and Wagner examples ([Figure 9.1.6](#)), on the other hand, each chord lasted for two beats, and so had a faster harmonic rhythm.

Listen to the following example to hear four-beat harmonic rhythm change to two-beat harmonic rhythm.

A: IV I vi V IV I V IV I V

whole-note harmonic rhythm half-note harmonic rhythm

YT: F90Cw4L-8NY

Figure 9.2.1 Bastille, “Pompeii”

In some music, harmonic rhythm will remain consistent, while in other pieces there will be an infinite variety to the length of harmonies. Throughout this text, we will be examining harmonic rhythm and the placement of harmonies within the phrase.

9.3 Shorter Progressions from the Circle of Fifths

9.3.1 II-V-I

The “ii–V–I” progression can be found in many pieces of music in all styles—classical, popular, but especially jazz, since the Great American Songbook (popular songs from the 1930s, 40’s, and 50’s) on which jazz repertoire is built contains many examples of this progression.

YT: d22CiKMPpaY

Figure 9.3.3 Hupfeld, “As Time Goes By”

9.3.2 VI-II-V-I

This progression can occur in one of the following three ways (or orderings):

- vi–ii–V–I
- I–vi–ii–V
- ii–V–I–vi

One can think of these reorderings as rotations, as shown in the example below.

Figure 9.3.4 Rotations of the vi–ii–V–I progression

9.3.2.1 vi–ii–V–I

The vi–ii–V–I progression contains the last four chords of the circle of fifths progression.

9.4 Harmonic Function

Now we will address non-circle-of-fifths progressions. Notice that we have not included the vii° or IV chord in any of the shorter circle of fifths progressions above. However, it is a common axiom that Rock ‘n’ Roll is made up of three chords: I, IV, and V. This is because each of those chords represents a harmonic function. **Harmonic function** refers to the tendency of certain chords to progress to other chords, or to remain at rest. Many texts on music theory enumerate three harmonic functions. In this text, we will discuss four.

1. **Tonic** function (abbreviated “ton.”): The I chord has tonic function, which is a state of stability and rest. Tonic chords do not demand progression to other chords.
2. **Dominant** function (abbreviated “dom.”): The V and vii° (chords containing the leading tone $\hat{7}$ and supertonic $\hat{2}$) tend to progress to tonic (I). *Special note:* The I/5th chord has *dominant* function when it resolves to the V chord, as in the third chord from the end of the “Star-Spangled Banner.”

F B \flat /D F B \flat B \flat /D Gm C \sharp 7/G \flat B \flat /F F7 B \flat

O'er the land of the free and the home of the brave!

B \flat : I/5th V7 I
dom. ton.

Figure 9.4.1 Key and Smith, “The Star-Spangled Banner”

3. Pre-dominant function (abbreviated “pre-dom.”): The IV and ii (chords containing the subdominant $\hat{4}$ and submediant $\hat{6}$) tend to progress to chords of dominant function.
4. Tonic prolongation function (abbreviated “ton. prol.”): The vi and iii (chords that share two common tones with $\hat{1} - \hat{3} - \hat{5}$ from the tonic triad) tend to occur after the tonic chord and progress to chords of pre-dominant function.

Harmonic function is represented on a flowchart in the next section.

9.4.1 The Harmonic Flowchart

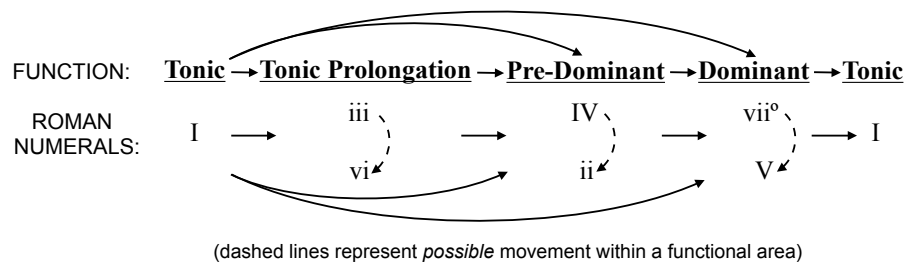

Figure 9.4.2 Harmonic Flowchart in Major

Remember that IV goes to I in the [plagal cadence](#) and V goes to vi in the [deceptive cadence](#). When IV goes to I, label IV as having *tonic prolongation* function. *The plagal cadence and deceptive cadence are exceptions to the harmonic flowchart.*

Here is the Harmonic Flowchart in minor. Note the addition of the subtonic VII chord, which has one function—to progress to III.

Figure 9.4.3 Harmonic Flowchart in Minor

The tonic chord I can progress directly to a chord of any other function and, in fact, many pieces begin with a I–V–I progression, representing harmonic function of Tonic-Dominant-Tonic.

9.4.2 Tonic-Dominant-Tonic Progression

This is the most elemental progression in music, often realized with I–V–I.

G: I tonic V7/5th dominant V7/3rd dominant I tonic

— I hang my hat in Ten-nes - see —

V7 (dominant) I tonic

YT: Jk7uXaNuWNE

Figure 9.4.8 S. Shafer and L. Shafer, “All My Ex’s Live in Texas”

The principle of “Tonic-Dominant-Tonic” could also be represented with $I-vii^{\circ}-I$. Even though we learned that “dominant” means “ $\hat{5}$ ” (and also “V”) in [earlier sections](#), “dominant *function*” in terms of harmony means “a chord that *progresses to* the tonic chord.” We will revisit this concept and other possibilities for “dominant function” later.

9.4.3 Tonic-PreDominant-Dominant-Tonic Progression

This sequence of harmonic functions can be realized in four possible ways:

- $I-ii-V-I$
- $I-IV-V-I$
- $I-IV-vii^{\circ}-I$
- $I-ii-vii^{\circ}-I$

Here are examples with $I-ii-V-I$.

YT: CXnEgbDcITo

Figure 9.4.14 Crane, Kauffman, Skloff, Willis, Solem, Wilde, “I’ll Be There For You” (bass line and chords only)

Progressions using vii° (I–IV– vii° –I and I–ii– vii° –I) are less common because of the instability of diminished chords.

9.4.4 The Tonic-Tonic Prolongation-PreDominant-Dominant Progression

This progression is most commonly realized with I–vi–IV–V, although in classical music one will often encounter I–vi–ii/3rd–V (mentioned [above](#) in the section on vi–ii–V–I).

Notice the bass line starts with descending thirds.

C: I vi IV V versus I vi ii/3rd V

Figure 9.4.15 Compare I–vi–IV–V to I–vi–ii/3rd–V (the bass lines are the same)

Here is a musical example with I–vi–ii/3rd–V.

Figure 9.4.16 shows two systems of musical notation for Beethoven's Pathétique Sonata, Op. 13, I. The first system is marked *p* (piano) and the second system is marked *cresc.* (crescendo). Both systems show a harmonic progression of four chords: Eb: I (tonic), Cm (ton. prol.), Fm7/Ab (pre-dom.), and Bb (dominant). The notation includes treble and bass staves with various musical symbols and a YouTube logo with the code YT: SSeveT_9ZxE.

Figure 9.4.16 Beethoven, Pathétique Sonata, Op. 13, I

9.4.4.1 I–vi–IV–V

As mentioned earlier, the progression I–vi–IV–V was so prevalent in the 1950s that it is known as the “50’s progression” and the “50’s doo-wop progression.”

Listen for this bass line in the following examples.

Figure 9.4.17 shows a musical notation for the I–vi–IV–V bass line in C major. The notation is in 4/4 time and shows a bass staff with four half notes: C, Am, F, and G. Below the staff, the chords are labeled: C: I, vi, IV, V.

Figure 9.4.17 I–vi–IV–V bass line in C major

- Carmichael and Loesser, “Heart and Soul” (in C major) ([YouTube](#))
- Williams, Belvin, Hodge, “Earth Angel” (in A-flat major) ([YouTube](#))
- Parton, “I Will Always Love You” (in A major) ([YouTube](#))
- Johnny Ramone, Dee Dee Ramone, Joey Ramone, “Rock ‘n’ Roll High School” (in C major) ([YouTube](#))

In the above examples, the chords have half-note [harmonic rhythm](#). In the following example, the chords have whole-note harmonic rhythm (4 beats per chord).

- Stephens and Gad, “All of Me” (in A-flat major) ([YouTube](#))

The I–vi–IV–V progression can also be rotated to IV–V–I–vi, as in the following example.

Figure 9.4.18 shows a musical example with the following chords and functions:

Chord	Function
Db	IV
Ab	V
Db	I
Bbm	vi

Below the notation is a YouTube icon and a QR code, with the text: YT: PIh2xe4jnpk

Figure 9.4.18 Atwey, Messinger, Pellizzer, Spivak, Tanas, “Rude” (bass line and chords only)

You will see more examples of Tonic-Tonic Prolongation-PreDominant-Dominant progressions, including the use of the iii chord, in the Practice Exercises and the Homework.

Remember, there are two exceptions in Harmonic Function: IV has tonic prolongation function when it progresses to I, and I/5th has dominant function when it progresses to V.

9.5 Exceptions Created by Harmonic Sequences

Exceptions to the harmonic flowchart often can be explained by harmonic sequences.

Figure 9.5.1 shows a musical example with the following chords and functions:

Chord	Function
Bb	I
F	V
Cm	ii
Gm	vi

Below the notation is a YouTube icon and a QR code, with the text: YT: Q4TK82N1nEk

unusual unusual unusual

YT: YW4dzWE1SUs

Figure 9.5.3 Felder, Henley, Frey, “Hotel California”

The example below shows how these exceptions come about through harmonic sequences.

Figure 9.5.4 Exceptions in “Hotel California” created through sequences

Look for harmonic sequences as a possible explanation when you encounter unusual chord progressions.

9.6 The Subtonic VII Chord in Popular Music

Although we will discuss mode mixture and the Mixolydian mode later, the ubiquity of the subtonic chord (\flat VII) in rock and popular music makes it important to discuss here.

The \flat VII chord can precede tonic, dominant, and pre-dominant chords, which means it can substitute for any function except tonic.

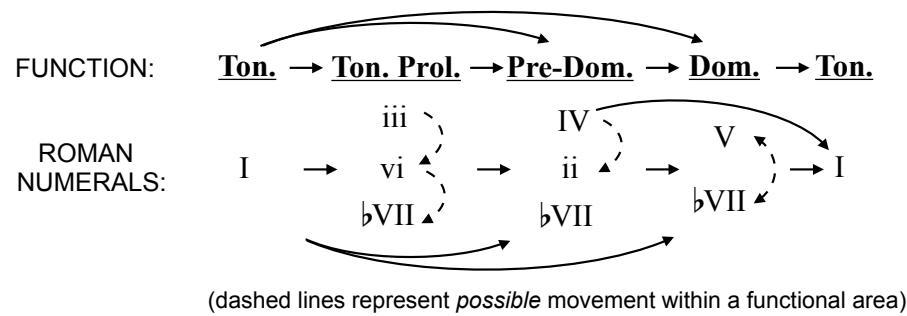

Figure 9.6.1 Harmonic Flowchart for Popular Music with Subtonic VII chord in Major

Notice also that movement from IV–I (from the plagal cadence) is common in the following examples from popular music.

Here are examples ending with $\flat\text{VII}$ –IV–I, where IV progresses to I (a plagal cadence) and is preceded by $\flat\text{VII}$.

F Eb Bb F

F: I $\flat\text{VII}$ IV I

FUNCTION: tonic ton. prol. pre-dom. tonic

YT: A_MjCqQoLLA

Figure 9.6.2 Lennon-McCartney, “Hey Jude” (bass line and chords only)

Consider the following questions: When a phrase ends on the IV chord, does it have dominant function (i.e., is it a half cadence)? Does IV have dominant function in popular music when it progresses to I? If so, does $\flat\text{VII}$ have pre-dominant function in the above progression?

Notice that $\flat\text{VII}$ begins the phrase in the following example, and proceeds to a IV–I conclusion.

$\text{Db}\text{sus}2$ A \flat Eb A \flat Eb $\text{Db}\text{sus}2$ A \flat Eb A \flat Eb

9.7 The Best-Seller Progression

D A Bm G

D: I V vi IV

Figure 9.7.1 The I–V–vi–IV “Best-Seller” Progression

The I–V–vi–IV progression occurs in many popular songs, has a [Wikipedia page](#), and has been [mentioned in a New Yorker article](#) about bestselling novels (see the third paragraph from the end of the article). The music group Axis of Awesome made [a compilation of several songs](#) with the I–V–vi–IV progression that makes for an entertaining summary (warning: there is some language after the 5-minute mark).

Here is a written-out example that includes the I–V–vi–IV progression.

The musical score is in A major (two sharps) and 4/4 time. The melody is in the treble clef, and the piano accompaniment is in the grand staff (treble and bass clefs). The lyrics are: "Ne-ver mind I'll find some-one like ____ you ____ I wish". The chords are labeled above the melody: A, E, F#m, D. The harmonic progression is labeled below the bass staff: A: I, V, vi, IV.

YT: hLQL3WQQoQ0

Figure 9.7.2 Adkins and Wilson, “Someone Like You”

The I–V–vi–IV progression can be rotated to become vi–IV–I–V and IV–I–V–vi.

Figure 9.7.3 Example of I–V–vi–IV rotation to vi–IV–I–V

Here is an example with the vi–IV–I–V progression.

Hel - lo from the oth - er side

Ab: vi IV I V

YT: rYEDA3JcQqw

Figure 9.8.2 Adkins and Epworth, “Rolling In The Deep” (chords and bass line only)

The i–VII–VI–VII progression can also be rotated to become VI–VII–i–VII.

Figure 9.8.3 The i–VII–VI–VII progression rotating to VI–VII–i–VII

In some cases, the fourth chord is eliminated. In that case, VI–VII–i–VII becomes VI–VII–i–i, as in the following examples.

YT: 4RYlgoQrshw

Figure 9.8.4 Bridges, Broadus, J. Mollings, L. Mollings, Roberts II, “All I Do Is Win” (chords and bass line)

Figure 9.8.5 shows a musical score in 4/4 time. The treble clef contains three chords: F, G, and Am. The bass clef contains a continuous eighth-note pattern. Below the bass line, the Roman numerals a: VI, VII, i are indicated. A YouTube icon and a QR code are present, with the text YT: F6AggxvVFRY below them.

Figure 9.8.5 Glass, *Metamorphosis Two*

The $i-VII-VI-VII$ progression can also be thought of as being in a major key: $vi-V-IV-V$.

Figure 9.8.6 shows a musical score in 4/4 time. The treble clef contains eight chords: Am, G, F, G, Am, G, F, G. Below the bass line, the Roman numerals a: i, VII, VI, VII, C: vi, V, IV, V are indicated.

Figure 9.8.6 The same progression viewed from minor and relative major

There are several more common harmonic progressions to explore in future chapters dealing with topics like secondary chords, mode mixture, the Neapolitan chord, augmented sixth chords, and jazz harmony.

9.9 Practice Exercises

Day One Day One:

- Write the circle of fifths progression in the following keys with root position triads. Label Roman numerals below and lead-sheet symbols above.

(a) In F major:

Exercise (a) shows a musical staff in F major (one flat). Below the staff, the Roman numerals I, II, III, IV, V, VI, VII, and I are indicated, corresponding to the circle of fifths progression.

(b) In B minor:

Exercise (b) shows a musical staff in B minor (two sharps). Below the staff, the Roman numerals i, II, III, IV, V, VI, VII, and i are indicated, corresponding to the circle of fifths progression.

- Review. Write the following intervals above the given note.

Exercise 2 shows a musical staff with six intervals to be written above the given note. The intervals are labeled below the staff: 1. $^{\circ}7\uparrow$, 2. $M3\uparrow$, 3. $P5\uparrow$, 4. $M7\uparrow$, 5. $^{\circ}5\uparrow$, 6. $m7\uparrow$.

3. Review. Given the lead-sheet symbol and key, write the key signature, triad or seventh chord, and Roman numeral.

Bbm	D	D°/F	C#m
1. f: _____	2. A: _____	3. c: _____	4. E: _____
F#°7	F#7/C#	Dm/F	Am
5. g: _____	6. B: _____	7. d: _____	8. F: _____

4. Review. Correct the rhythmic notation of the following example.

Incorrect Correct

Day Two:

5. For each cadence, label the chord(s) involved.
- Half Cadence = _____
- Deceptive Cadence = _____
- Plagal Cadence = _____
- Authentic Cadence = _____
6. Analyze the following progressions with lead-sheet symbols above and Roman numerals below.

_____	_____	_____	_____	_____	_____	_____	_____
F: _____	_____	_____	_____	E: _____	_____	_____	_____
1	2	3	4	1	2	3	4

7. For the progression, do the following:
- (a) Given the Roman numerals, write the triads or seventh chords
- (b) Analyze the harmonies with lead-sheet symbols above the staff
- (c) Analyze the harmonic function of each harmony using the abbreviations “ton.” for tonic function, “dom.” for dominant function, “pre-dom.” for pre-dominant function, and “ton. prol.” for tonic prolongation function
- (d) Specify the cadence that ends the progression

_____	_____	_____	_____	_____	_____
D: I	iii	vi7	ii7/3rd	V	I
FUNCTION: _____	_____	_____	_____	_____	_____
					Cadence: _____

Chapter 10

Non-Chord Tones

10.1 Introduction to Non-Chord Tones

Non-chord tones are notes that do not belong to the chord. Sometimes referred to as “embellishing tones” and “non-harmonic tones,” non-chord tones are classified by how they are approached and left (either by same tone, step, or leap).

There are nine types of non-chord tones.

Table 10.1.1

<i>Non-Chord Tone</i>	<i>Approached by</i>	<i>Left by</i>
Passing Tone	step	step in same direction
Neighbor Tone	step	step in opposite direction
Appoggiatura	leap	step
Escape Tone	step	leap in opposite direction
Double Neighbor	see text	see text
Anticipation	step	same note
Pedal Point	same note	same note
Suspension	same note	step down
Retardation	same note	step up

The following qualifiers can be applied to non-chord tones:

- Accented—occurring on the beat
- Unaccented—occurring on the weak part of the beat (on the offbeat)
- Chromatic—not belonging to the key
- Metrical—equal to the duration of the beat
- Sub-metrical—smaller than the beat
- Super-metrical—larger than the beat

10.2 Passing Tones

Passing tones are notes that pass between chord tones.

YT: rClU0dS5Zyw

Figure 10.2.1 Desrouleaux, Kirkpatrick, Martin, Robbins, Allan, “Want to Want Me”

In the first bar of the “Want to Want Me” example, the passing tone is unaccented. In the third bar, it is accented (on the beat). The non-chord tone in bar 2 is an *appoggiatura*.

There can be two consecutive diatonic passing tones in a descending scale segment from the root and fifth of a chord.

D \flat (D \flat -F-A \flat) A \flat 9(#5) (A \flat -C-E-G \flat -B \flat) D \flat 6 (D \flat -F-A \flat -B \flat)

Figure 10.4.2 Springsteen, “Born to Run”

Notice that both the appoggiaturas in the following example resolve up. Both the leap to and step away from any appoggiatura can be from any direction.

Figure 10.4.3 shows a musical score in 8/8 time. The top staff has two measures. The first measure has a chord labeled $A\flat$ (Ab-C-Eb) with an appoggiatura (app) marked above the first note. The second measure has a chord labeled $E\flat/G$ (Eb-G-Bb) with an appoggiatura (app) marked above the first note. The bottom staff has two measures of accompaniment, each starting with a quarter rest followed by a series of eighth notes.

YT: Fcomfvmq28Q

Figure 10.4.3 Mozart, Symphony No. 40, K. 550, II

In the next section we discuss the escape tone.

10.5 Escape Tone

An **escape tone** is approached by step and left by leap in the opposite direction. An easy example to remember is the end of the “Star-Spangled Banner.” The word “of” in “home *of* the brave” is an escape tone.

Figure 10.5.1 shows a musical score in 3/4 time. The top staff has four measures. The first measure has a chord labeled $B\flat/F$ (Bb-D-F) with the word “home” below it. The second measure has a chord labeled $F7$ (F-A-C-Eb) with the word “of” below it. The third measure has a chord labeled $B\flat$ (Bb-D-F) with the word “the” below it. The fourth measure has a chord labeled $B\flat$ (Bb-D-F) with the word “brave.” below it. The word “of” is marked with an escape tone (esc) above the note.

YT: LGvW6jHUHiY

Figure 10.5.1 Francis Scott Key and John Smith, “Star-Spangled Banner”

Here is another example, with escape tones used in a melodic sequence.

Figure 10.5.2 shows a musical score in 3/4 time. The top staff has four measures. The first measure has a chord labeled C (C-E-G) with the word “home” below it. The second measure has a chord labeled G/F (G-B-D-F) with the word “of” below it. The third measure has a chord labeled C/E (C-E-G) with the word “the” below it. The fourth measure has a chord labeled F (F-A-C) with the word “brave.” below it. The word “of” is marked with an escape tone (esc) above the note. The word “the” is marked with an appoggiatura (app) above the note. The word “brave.” is marked with an appoggiatura (app) above the note. The bottom staff has four measures of accompaniment, each starting with a quarter rest followed by a series of eighth notes.

YT: A-Qfd7gpGfU

Figure 10.5.2 Haydn, Sonata No. 48 in C Major, Hob. XVI: 35, III

Here is an example of an escape tone in popular music.

YT: ap87QgZKTnw

Figure 10.5.3 P. McCartney and L. McCartney, “Silly Love Songs”

10.6 Double Neighbor

The **double neighbor** (sometimes called a “neighbor group”) occurs when both the upper and lower neighbor occur before the return to the starting tone.

YT: ep6rzB1Kx3U

Figure 10.6.1 C major arpeggio embellished with double neighbors

YT: ep6rzB1Kx3U

Figure 10.6.2 Kuhlau, Sonatina in C Major, Op. 55, No. 1, I

The double neighbor is sometimes confused with escape tones and appoggiaturas. Be sure to keep track of chord tones when analyzing non-chord tones. Look at the next example and ask yourself how you would analyze the harmony and non-chord tones on beat 4 of the first measure.

Here is an example of an anticipation in popular music.

YT: StKVS0eI85I

Figure 10.7.2 Harry and Moroder, “Call Me”

Sometimes **syncopation** will lead to an anticipation of a note in a chord in the following measure, as occurs at the ends of bars 1, 2, and 3 of the “Call Me” example.

10.8 Pedal Point

A **pedal point** is a note that is held through changing harmonies, starting as a chord tone before becoming a non-chord tone. Pedal points are often in the bass voice (the term “pedal” relates to the **foot pedals on an organ**).

YT: W4271Rm9TSU

Figure 10.8.1 Bach, J.S., *Well-Tempered Clavier, Book I*, Prelude 1 in C major BWV 846

Here is an example from the Romantic era.

ped. pt. (bass note is still sounding)

YT: jYgW5PhsQ0E

Figure 10.8.2 Clara Schumann, Op. 13, No. 2, “Sie liebten sich beide”

The Clara Schumann example above also has a suspension (“3-2 sus.”); suspensions are discussed in the next section.

When a pedal point is in the bass, it is not necessary to specify the inversion of the chord because the bass pedal point obscures the inversion.

You might also encounter a pedal point in a higher voice, as well as a “double pedal point,” where two notes (often a fifth apart) act as pedal points.

10.9 Suspension

Suspensions are accented non-chord tones occurring on downbeats. A **suspension** is approached by the same note and resolves down by step. A suspension is made up of a preparation, suspension, and resolution. Sometimes the preparation is tied to the suspension.

G (G-B-D) C (C-E-G)

Preparation Suspension Resolution Prep. (no tie) Sus. Res.

C: V I C: V I

Figure 10.9.1 Introductory Suspension example with and without tie

Suspensions are classified by numbers (9-8, 7-6, 4-3, 2-3, and sometimes 6-5) that specify the interval distance of the suspended note and its resolution to the bass note

Chords: G C Dm/F C/E C G C G/B F C

Suspensions: 9-8, 7-6, 4-3, 2-3, 6-5

Figures: C: V I ii/3rd I/3rd I V I V/3rd IV I

Figure 10.9.2 Examples of the 9-8, 7-6, 4-3, 2-3, and 6-5 suspensions

In the example above, the notes in the 4-3 suspension are an 11th and 10th higher than the bass. Reduce all intervals larger than an octave to the numbers 7-6, 4-3, and 6-5.

Here is an example with a 4-3 suspension.

Chords: Ebm7 F

Suspensions: 4-3

Figures: pt pt nt

YT: b8G9vRqQ3RI

Figure 10.9.3 Barber, *Adagio for Strings*

Here is an example with 7-6 and 9-8 suspensions.

Figure 10.9.4 Handel, Suite No. 2 in D Major, HWV 349: II

The 2-3 suspension is the “bass suspension” and is measured against an

upper voice. Again, you may encounter the literal intervals 10-9 but should label the suspension as 2-3.

G: I V/3rd V I V

YT: VKNcvMcGlvi

Figure 10.9.5 Bach, J.S., Chorale 238, “Liebster Jesu, wir sind hier,” BWV 373

When a chord is inverted, you will sometimes encounter non-standard suspension numbers like 5-4 or 3-2.

C: I/5th V7/7th C: IV V7/7th

Figure 10.9.6 Non-standard suspension numbers because of inverted chords

You will sometimes encounter decorations of suspensions where other notes occur before the resolution, as in the following example.

YT: fTwkVsECg9w

Figure 10.9.7 Bach, J.S., French Suite No. 1 in D Minor, BWV 812, Sarabande

The “ret.” in the tenor part in the second measure is a retardation, which is covered in the next section.

10.10 Retardation

A **retardation** is usually an accented non-chord tone, meaning it occurs on a downbeat. A retardation is approached by the same note and resolves up by step.

YT: hSqWR_dsecg

Figure 10.10.1 Mozart, Piano Sonata in C major, K. 545, II

Classical composers like Mozart often used retardations and suspensions at cadences in slow movements.

10.11 Incomplete Neighbor

Because composers are notorious for “breaking the rules,” you will encounter examples in the real world that either defy explanation or have multiple valid explanations. One “utility” non-chord tone is the incomplete neighbor.

The image shows a musical score for Puccini's "O mio babbino caro". The vocal line is in the upper staff, and the piano accompaniment is in the lower staff. The key signature is three flats (B-flat major or D-flat minor), and the time signature is 6/8. The vocal line has lyrics: "da - - - re - Por - - - ta Ros - - - - sa". Above the vocal line, the chords Eb, Bbm7, and Fm7 are indicated. The piano accompaniment has chords Ab: V, ii7, and vi7 indicated below it. Both staves have a bracket labeled "inc. nt." (incomplete neighbor tone) spanning the first two measures. A YouTube icon and a QR code are present below the piano staff, with the text "YT: Sf-tjXevlyQ" underneath.

Figure 10.11.1 Puccini, *Gianni Schicchi*, “O mio babbino caro”

You may also find incomplete double neighbor figures, especially in late Romantic music and jazz. Keep an open mind when analyzing music.

10.12 Adding Non-Chord Tones to a Chord Progression

Here are ideas for how to add non-chord tones (or “embellishments”) to the melody or inner voice part of a chord progression:

1. Repeated note: add upper or lower neighbor
2. Step down:
 - (a) Add a suspension by delaying the resolution of the note
 - (b) Add an escape tone by moving by step in the opposite direction of the original stepwise movement, then leap
 - (c) Add a double neighbor
 - (d) Add a chromatic passing tone
 - (e) Add an anticipation
3. Step up:
 - (a) Add retardation by delaying resolution of the note
 - (b) Add a double neighbor
 - (c) Add a chromatic passing tone
 - (d) Add an anticipation
 - (e) Add an appoggiatura by leaping one step beyond the note of resolution, placing the appoggiatura on the beat, displacing the note of resolution to occur after the beat
4. Leap of 3rd:

- (a) Fill in the 3rd with a passing tone
- (b) Add an appoggiatura by leaping one step beyond the note of resolution, placing the appoggiatura on the beat, displacing the note of resolution to occur after the beat

5. Leaps of 4th or larger: do not embellish (for now)

Here is a basic framework with all possibilities labeled.

A musical framework in 4/4 time showing four measures with chords G, D, Em, and C. The treble and bass staves show various non-chord tone possibilities with labels: 'step down', 'step up', 'repeated note', 'leap of 3rd', and 'leap of 4th'. Below the staves, Roman numerals are provided: G: I, D: V, Em: vi, C: IV.

Here is one possible solution:

A musical solution in 4/4 time showing four measures with chords G, D, Em, and C. The treble and bass staves show specific non-chord tones with labels: 'esc.' (escape note), '4-3 sus' (suspension), 'nt' (non-chord tone), 'pt' (passing tone), and 'app' (appoggiatura). Below the staves, Roman numerals are provided: G: I, D: V, Em: vi, C: IV.

Notice that, when non-chord tones are added to different voices on the same beat, consonant intervals (3rds, 5ths, 6ths, or 8ves) are made. If consonant intervals can't be made, the voices are staggered rhythmically (as occurs on beats 3 and 4 in measure one of the example above).

10.13 Practice Exercises

1. Fill in the blanks in the following table.

<i>Non-Chord Tone Type</i>	<i>Approached by</i>	<i>Left by</i>
	same tone	step up
		leap in opposite direction
	step	step in same direction
	leap	

2. Analyze the harmonies with lead-sheet symbols above the staff and Roman numerals below. Add the following non-chord tones: two suspensions, one passing tone, and one appoggiatura. Do not add non-chord tones to the bass.

Lead-sheet: _____

Rom. num.: _____

3. Analyze the harmonies with lead-sheet symbols above the staff and Roman numerals below, then analyze the non-chord tones.

Chapter 11

Melodic Analysis

We will divide analysis of melodies into [motives](#) (which can be broken into [fragments](#)) and [phrases](#) (which can be broken into [subphrases](#)) in order to understand the construction of melodies. We will discuss periods and sentences in another chapter.

11.1 Motive

A **motive** (or motif) is the smallest identifiable melodic idea in music. However, we will find times when it will be necessary to discuss a smaller fragment (called a “germ” by some authors) from a motive.

In the following example from the first movement of Beethoven’s Symphony No. 1, we find four motives within the first four measures of the primary theme.

YT: tFafjC-180E

Figure 11.1.1 Beethoven, Symphony No. 1, Op. 21, I, Motives in Primary Theme

Later in the movement we find Beethoven extracting motives from this four-measure phrase in order to develop them through [sequences](#).

Here is development of motive 1.

YT: tFafjC-180E

Figure 11.1.2 Beethoven, Symphony No. 1, I, development of motive 1

Here is development of motive 2

YT: tFafjC-180E

Figure 11.1.3 Beethoven, Symphony No. 1, I, development of motive 2

Here is development of motives 2 and 3 together.

YT: tFafjC-180E

Figure 11.1.4 Beethoven, Symphony No. 1, I, development of motives 2 and 3

The previous excerpt leads directly into the next, which features development of motive 4.

YT: tFafjC-180E

In the next section, we will look at some of the various ways one can alter a melody

Figure 11.1.5 Beethoven, Symphony No. 1, I, development of motive 4

11.2 Melodic Alteration

While there are more than a dozen ways to alter a melody, we will focus on seven methods of basic melodic alteration at this point of the text.

11.2.1 Inversion

Inversion as applied to a music means an idea is exactly upside-down or “mirrored” across a horizontal plane, like mountains reflected in a lake.

First, listen to the following example.

YT: E8EvUmq0Zao

Figure 11.2.1 Bach, Invention No. 1 in C Major, BWV 772

The first seven notes in measure 1 are inverted in measure 3, shown in the following example.

Figure 11.2.2 Melodic inversion in Invention No. 1 in C Major by J.S. Bach

Melodic inversion can be *real* (where every interval is exactly the same quality) or *tonal* (where the intervals abide by the scale or key). For the majority of this text, we will encounter tonal inversion until we discuss techniques of 20th- and 21st-century music in the final chapters of this text.

11.2.2 Intervallic Change

Intervallic change is less exact than inversion. With **intervallic change**, the rhythm is generally intact and the motive relates to a previous iteration, but some of the intervals are different.

The musical notation shows a melody in 4/4 time, key of B-flat major. The first measure is labeled 'mot. 1' with an interval of m3 (minor third) between the first and second notes. The second measure is labeled 'mot. 1 (int. ch.)' with an interval of P4 (perfect fourth) between the first and second notes. The lyrics are 'The ver - y thought of you and I for - get to do'.

YT: 7qkbDMRc9vo

Figure 11.2.3 Noble, “The Very Thought of You”

The next example has two intervals changed, one of which includes a change in contour.

The musical notation shows a melody in 4/4 time, key of D major. The first measure is labeled 'mot. 1' with an interval of m3↓ (minor third down) between the first and second notes. The second measure is labeled 'mot. 1 (int. ch.)' with an interval of M2↑ (major second up) between the first and second notes. The lyrics are 'I'm not in love — so don't for-get it'.

YT: STugQ0X1NoI

Figure 11.2.4 Stewart and Gouldman, “I’m Not In Love”

11.2.3 Augmentation and Diminution

Augmentation usually refers to an exact doubling of the duration of every rhythmic value in a motive or phrase.

The musical notation shows a fragment 'a' in the right hand of J.S. Bach's Invention No. 1. The fragment is shown in its original form, then augmented (doubled in duration), and then augmented and extended. The lyrics are 'frag. a', 'frag. a aug.', 'frag. a aug.', 'frag. a aug. & ext.'.

YT: E8EvUmq0Zao

Figure 11.2.5 Augmentation of fragment “a” in Invention No. 1 by J.S. Bach

We will discuss extension and fragmentation of motives later in this chapter.

Diminution is the opposite of augmentation and usually refers to the exact halving of the duration of every rhythmic value in a motive or phrase.

However, diminution can also refer to the use of shorter rhythmic values, as in the following example.

Figure 11.2.6 Diminution of the first four notes in “Uranus” from *The Planets* by Holst

11.2.4 Rhythmic Change

Similar to the inexact nature of intervallic change, label a motive as having **rhythmic change** when some but not all rhythmic values of the motive are varied.

mot. 1

mot. 1 (rhy. ch.)

rhythmic change

(same)

YT: vCadCBR95oU

Figure 11.2.7 Azor and Davies, “Push It”

Imagine the effect if there had been no rhythmic change and the first measure was merely repeated.

In the next example, from Beethoven’s “Pathétique” sonata, motive 1 has dotted rhythms during the introduction of the piece.

YT: SrcOcKYQX3c

Figure 11.2.8 Beethoven, Pathétique Sonata, Op. 13, I, Introduction

In the development section, Beethoven changes the rhythm of motive 1 then abbreviates it in the following measure when it is sequenced up a step.

YT: SrcOcKYQX3c

Figure 11.2.9 Beethoven, Pathétique Sonata, Op. 13, I, development section

11.2.5 Ornamentation

Ornamentation means the notes in a motive can be ornamented or embellished with passing tones, neighbor tones, and the other non-chords tones we studied in the previous chapter.

Here is an example of the ornamentation of a 4-note motive.

YT: s6fPN5aQVDI

Figure 11.2.10 Wonder, “Sir Duke”

11.2.6 Extension

Extension of a motive needs little explanation: additional material is added to the end of a motive upon its repetition or reoccurrence at a later point in a piece.

Refer to the “Sir Duke” example directly above and to the final measure of the J.S. Bach [Invention in C Major example](#) in the section on augmentation.

11.2.7 Retrograde

While rare in tonal music, it is worth mentioning **retrograde**, which is an exact reversing of the order of notes, as can be seen in the following example from popular music.

YT: ECVbVwEzY2E

Figure 11.2.11 Melodic Retrograde in “Toxic” by Dennis, Karlsson, Winnberg, Jonback

We will not consider [transposition](#) of a motive (also known as a [sequence](#)) to be a motivic alteration worth labeling since it is so common.

11.3 Fragment

While the motive is usually defined as the smallest identifiable melodic idea in a composition, “compound” motives can be broken into **fragments** (sometimes called “germs”).

In J.S. Bach’s *Invention 1 in C Major I*, the opening 7-note compound motive can be divided into two overlapping four-note fragments that can each be developed independently.

Figure 11.3.1 Fragmentation of motive 1 in C Major Invention

Here again is the example of development (in augmentation) of fragment “a.”

YT: E8EvUmq0Zao

Figure 11.3.2 Development of fragment “a” in Invention 1

In the following example Bach develops an inversion of fragment “b” leading into a cadence in G major.

YT: E8EvUmq0Zao

Figure 11.3.3 Development of fragment “b” in Invention 1

11.4 Phrase

Musical form is full of sections, and the **phrase** is the smallest category of section. Unlike a motive, a phrase gives the sense of completing a formal unit.

In classical music, phrases always end with **cadences**; if you have encountered a cadence, you have just witnessed the completion of a phrase. In popular music, a phrase might be completed by a melody reaching four measures in length or by completing a line of lyric instead of by a cadence.

To generalize (or perhaps over-generalize), most of the phrases you encounter will be four measures in length and will end with one of **the four cadence types** (authentic cadence, half cadence, deceptive cadence, and, less commonly, the plagal cadence). While four- and eight-measure phrases are the most common, you will also encounter phrases that are five, six, and seven measures in length. Less commonly, you will encounter three-measure phrases.

Here are examples of four-measure phrases. Notice that these phrases have a sense of completion even though they do not end with cadences.

phrase “a”

YT: nz80onuEhHE

Figure 11.4.1 Robinson and White, “My Girl”

phrase “a”

YT: vNAq7Cv34l4

Figure 11.4.2 Ashford and Simpson, “I’m Every Woman”

Here is an example of a five-measure phrase. Notice that the final chord (a minor iv chord, which will be discussed in the chapter on mode mixture) is part of a half cadence or deceptive cadence, yet the phrase has a feeling of completion, especially considering its relation to the phrases before and after it.

phrase “a”

not a cadence

(phrase “a” continued)

I/5th V
half cadence

YT: 1vDxlnJVvW8

Figure 11.4.5 Mozart, Piano Sonata in C Major, K. 545, II

Examples of seven-measure phrases are rare and often involve [elisions](#), which will be covered in a later [chapter](#) when we discuss how phrases are combined to create small forms like [periods](#) and [phrase groups](#).

11.5 Subphrase

Subphrases are smaller than phrases but larger than motives. Most of the subphrases we encounter will be two measures long. Subphrases are called “phrase segments” and “phrase members” in other texts.

We will label subphrases with letters (*a*, *b*, etc.). When a subphrase repeats but has slight alterations, we will put an apostrophe after the letter (e.g., *a'*) and refer to it as “a prime.” If another alteration to subphrase *a* occurs, we will label it as *a''* and refer to it as “a double prime.” If the subphrase is merely transposed (in a sequence), we will label it as *a*, not *a'* in our analysis.

We are including analysis of subphrases in this text because many compositions have melodic units that are two measures long. Analyzing subphrases helps us understand the construction of melodies.

In the following example, notice that subphrases *a* and *a'* have the same first six notes ($G^\sharp-F^\sharp-B-C^\sharp-E-E$).

Phrase:

The musical notation is in treble clef, key of D major (two sharps), and 4/4 time. It shows a four-measure phrase. The first two measures are labeled 'subphrase a' and the next two measures are labeled 'subphrase a''. Above the staff, a bracket labeled 'a' spans the entire four measures. The melody consists of eighth and quarter notes with triplet markings. The lyrics are: 'Don't stop think - ing a-bout to-mor-row Don't stop it - 'll soon be here —'. Below the staff, a red YouTube play button icon and a QR code are shown, with the text 'YT: 0vSbZEYlfnM' underneath.

Don't stop think - ing a-bout to-mor-row Don't stop it - 'll soon be here —

YT: 0vSbZEYlfnM

Figure 11.5.1 C. McVie, “Don’t Stop”

Here is an example of a four-measure phrase with subphrases *a* and *b*.

Phrase:

The musical notation is in bass clef, key of B-flat major (two flats), and 4/4 time. It shows a four-measure phrase. The first two measures are labeled 'subphrase a' and the next two measures are labeled 'subphrase b'. Above the staff, a bracket labeled 'a' spans the entire four measures. The melody consists of eighth and quarter notes. The lyrics are: 'Par-ty rock is in the house to - night Ev - 'ry - bod - y just have a good time'. Below the staff, Roman numerals are provided: 'f: i VII VI i VII VI'. A red YouTube play button icon and a QR code are shown, with the text 'YT: KQ6zr6kCPj8' underneath.

Par-ty rock is in the house to - night Ev - 'ry - bod - y just have a good time

f: i VII VI i VII VI

YT: KQ6zr6kCPj8

Figure 11.5.2 Stefan Gordy and Skyler Gordy, “Party Rock Anthem”

Notice that we are not looking at the motives within these subphrases. This is because we are looking for melodic segments that are repeated. For some compositions it is more informative to look at subphrases and less informative to identify motives if motives are not extracted and developed.

There will be times when you will notice important melodic ideas happening at three levels of analysis (motive, subphrase, and phrase), as in the following example.

Phrase:

The musical notation is in 4/4 time with a key signature of three sharps (F#, C#, G#). The melody consists of eighth and quarter notes. The lyrics are 'Strangers waiting up and down the boulevard Their'. The notation is divided into two subphrases: 'subphrase a' (measures 1-4) and 'subphrase b' (measures 5-8). Subphrase a contains two motifs: 'mot. 1' (measures 1-2) and 'mot. 1 (inv.)' (measures 3-4). The lyrics 'Strangers' are under measures 1-2, 'waiting' under measures 3-4, 'up and down the' under measures 5-6, 'boulevard' under measures 7-8, and 'Their' under measure 9.

subphrase a

subphrase b

mot. 1

mot. 1 (inv.)

Stran - gers wait - ing up and down the bou - le - vard Their

E: IV I

YT: 1k8craCGpgs

Figure 11.5.3 Perry, Cain, Schon, “Don’t Stop Believin”

There is ambiguity between motive and subphrase. Reconsider the following example from the section on intervallic change:

mot. 1

m3

mot. 1 (int. ch.)

P4

8

The ver - y thought of you

and I for - get to do

YT: 7qkbDMRc9vo

Figure 11.5.4 Noble, “The Very Thought of You”

When you listen to the music of “The Very Thorough of You” you will hear that each motive lasts for two measures. The difference is that motives are typically short—two to seven notes—whereas subphrases will usually contain six or more notes and occupy two measures (half of a four-measure phrase).

11.6 Practice Exercises

Day One:

1. For the following examples:
 - Analyze motives using numbers (1, 2, etc.)
 - Label lead-sheet symbols and Roman numerals when blanks are provided
 - Label non-chord tones for notes in parentheses

(Note: Even though there are 11 blanks for motives, there are only six motives in this example due to motivic alteration.)

Motives:

Lead-sheet:

Bb: _____

YT: RgKAFK5djSk

Figure 11.6.1 Franks, Puth, Thomaz, “See You Again”

2. For the following example, alter the given motives as specified. Also, provide lead-sheet symbols and Roman numerals and analyze non-chord tones.

Lead sheet: _____

Motives: 1 2 1 aug. 2 aug. 1 2 inv.

C: _____

3. For the following example:
- Write the lead-sheet symbols
 - Write the chords as whole notes in the bass clef staff
 - Analyze non-chord tones, including the ones you write
 - Alter the given motives as specified to fit the harmony
 - Specify the cadence

Lead sheet: _____

Motives: 1 1 int. ch. 1 inv. 1 inv.

g: i iv i V⁷

Cadence: _____

Day Two:

4. For the following example:
- Analyze the motives using numbers (1, 2, etc.), noting motivic

alterations when applicable

- Analyze subphrases using letters and primes (a , a' , b , etc.)
- Label lead-sheet symbols and Roman numerals when blanks are provided
- Label non-chord tones for notes in parentheses

Lead-sheet: _____

Subphrases: _____

Motives: _____

fp

e: i iv i ii° V i iv V

YT: Dbb_VGJXaSU

Chapter 12

Form in Popular Music

The overall form of a piece of popular music usually can be broken down into smaller 4-, 8-, 12-, or 16-bar sections. The material in this chapter is informed by John Covach’s essay “[Form in Rock Music](#)” from *Engaging Music: Essays in Music Analysis* (ed. D. Stein).

12.1 Verse-Chorus Form

The **Verse-Chorus form** is arguably the most common musical form of present day popular music and is probably familiar to most readers of this text. In Verse-Chorus form, the chorus contains the “hook,” the memorable refrain, while the verse typically contains less memorable melodic material. A clear example can be found in the 1985 song “We Are the World.”

Table 12.1.1 Jackson and Richie, “We Are The World”

0:00–0:26	<i>Introduction</i> , 6 bars
0:26–0:53	<i>Verse 1</i> , 8 bars
0:53–1:18	<i>Verse 2</i> , 8 bars
1:18–1:49	<i>Chorus</i> , 9 bars
1:49–2:14	<i>Verse 3</i> , 8 bars
2:14–2:41	<i>Chorus</i> , 8 bars
2:41–3:08	<i>Bridge</i> , 8 bars
3:08–3:35	<i>Chorus</i> , 8 bars
3:35–4:02	<i>Chorus</i> , 8 bars ending with key change
4:02–end	<i>Chorus</i> , 7 times in F major with fade out

YT: 9AjKuyX0rVw

Common additions to the Verse-Chorus form, beside the bridge, are the pre-chorus and post-chorus.

Table 12.1.2 Cobain, Novoselic, and Grohl, “Smells Like Teen Spirit”

0:00–0:25	<i>Introduction</i> , 12 bars
0:25–0:42	<i>Verse 1</i> , 8 bars
0:42–0:58	<i>Pre-chorus</i> , 8 bars
0:58–1:23	<i>Chorus</i> , 9 bars
1:23–1:31	<i>Post-chorus</i> , 4 bars
1:31–1:39	<i>Interlude</i> , 4 bars
1:39–1:56	<i>Verse 2</i> , 8 bars
1:56–2:12	<i>Pre-chorus</i> , 8 bars
2:12–2:37	<i>Chorus</i> , 12 bars
2:37–2:45	<i>Post-chorus</i> , 4 bars
2:45–3:02	<i>Guitar solo</i> , 8 bars
3:02–3:10	<i>Interlude</i> , 4 bars
3:10–3:26	<i>Verse 3</i> , 8 bars
3:26–3:42	<i>Pre-chorus</i> , 8 bars
3:42–4:37	<i>Chorus</i> , 21 bars

YT: hTWKbfoikeg

It is worth noting that there may disagreement about labeling sections in a form. One person may call a section a “pre-chorus,” another may call it a “first chorus,” while another may call it “verse part b.” There is ambiguity in naming sections and disagreement is to be expected.

There are “simple” and “contrasting” verse-chorus forms. A **simple verse-chorus** form has the same harmonic progression for the verse and chorus (e.g., “[All About That Bass](#)”). The chord progressions for the verse and chorus are different in a **contrasting verse-chorus** form like “We Are the World.”

12.2 AABA Form

The AABA form is associated with the hits of the musicals of the 1930s and remained one of the most popular forms of popular music until the 1950s, when Rock ‘n’ Roll became popular. Each section (A or B) is typically 8 measures long. The A sections contain the primary melody we associate with the song while the B section provides contrast and is often called the “bridge” or “middle eight.”

Table 12.2.1 Gershwin, “I Got Rhythm”

0:00–0:10	<i>Introduction</i> , 8 bars
0:10–0:18	<i>A section (A1)</i> , 8 bars
0:18–0:26	<i>A section (A2)</i> , 8 bars
0:26–0:35	<i>B section</i> , 8 bars
0:35–0:45	<i>A section (A3)</i> , 10 bars
0:45–0:53	<i>A section</i> , 8 bars (instrumental shout chorus)
0:53–1:02	<i>Introduction</i> , 8 bars (shout chorus continues)
1:02–1:10	<i>A section (A1)</i> , 8 bars
1:10–1:19	<i>A section (A2)</i> , 8 bars
1:19–1:27	<i>B section</i> , 8 bars
1:27–1:35	<i>A section (A3)</i> , 8 bars
1:35–1:54	<i>Coda</i> , 12 bars

YT: Q_jKTPsh54Y

It is common for one or more of the A sections to be instrumental, and it is also common to eliminate an A section on the repeat of the entire AABA form (AABAABA, for example).

Other well known songs with AABA form include *Over the Rainbow* from *The Wizard of Oz* as well as many famous songs from the *Great American Songbook* by George Gershwin (“Let’s Call the Whole Thing Off,” “Someone to Watch Over Me”), Cole Porter (“Anything Goes,” “Love for Sale,” “I Get A Kick Out of You”), Irving Berlin (“Blue Skies,” “Puttin’ on the Ritz”), and Jerome Kern (“The Way You Look Tonight,” “Smoke Gets In Your Eyes”).

The AABA form continued to be dominant into the 1960s (including Beatles songs like “Yesterday,” “Norwegian Wood,” and “[Hey Jude](#),” to name a few). The AABA form is less common in the present day but can be found in songs like The Cure’s “[Friday, I’m in Love](#)” (1992) and Norah Jones’s “[Don’t Know Why](#)” (1999).

A note on terminology: the entire 32-bar AABA form is sometimes called a “refrain” or “chorus,” and some AABA songs are preceded by a “verse.” This means a song like “[Someone To Watch Over Me](#)” begins with a verse and is followed by a “refrain” (which could also be called a “chorus”). Other synonymous terms you may encounter for “verse” in the context of AABA form are “prelude” and “introduction.”

12.3 ABAC Form

Many popular songs from the 1930s–1950s were in the 32-bar ABAC form. Well-known examples include “[White Christmas](#),” “[Someday My Prince Will Come](#),” and “[When I Fall In Love](#).”

“Star Dust” is an example of an ABAC form that is usually performed with a verse preceding the refrain.

Table 12.3.1 Carmichael, “Star Dust”

0:00–0:13	<i>Introduction</i> , 4 bars
0:13–1:13	<i>Verse</i> , 16 bars (8 bars + 8 bars)
1:13–1:41	<i>A section</i> , 8 bars
1:41–2:07	<i>B section</i> , 8 bars
2:07–2:32	<i>A section</i> , 8 bars
2:32–2:57	<i>C section</i> , 8 bars
2:57–3:12	<i>Coda</i> , 4 bars

YT: hWkoFj14HkE

The ABAC form may also occur as ABAB’ where the B’ section begins the same as the B section but ends differently.

12.4 The 12-Bar Blues

Associated with the Blues genre, which originated in the early 1900s, the 12-bar blues was also popular during the Swing Era of the 1930s and 1940s, (examples include “In The Mood” and “One O’Clock Jump”), as well as during the early years of Rock ‘n’ Roll in the 1950s (“Johnny B. Goode,” “Hound Dog,” “Rock around the Clock”). The basic 12-bar blues progression is shown below.

Table 12.4.1 Berry, “Johnny B. Goode”

Bars 1–4:	I I I I
Bars 5–8:	IV IV I I
Bars 9–12:	V IV I I

YT: p0FLZyTZBJ4

12.5 Harmonically Closed and Open Sections

A harmonically closed section ends on the tonic chord (I). A harmonically open section typically ends on a non-tonic chord like V, but could also end on IV.

In an AABA form, the A sections are usually harmonically closed, ending on I, and the B section (or bridge) is usually harmonically open, ending on V.

In verse-chorus form, sections that leads into the chorus (verse, pre-chorus, and bridge) are usually harmonically open, while choruses can be harmonically closed or open.

If you compose a piece in AABA or verse-chorus form, placing harmonically open and closed sections appropriately is important to the flow of the music.

For example, the verse and bridge on “We Are the World” are harmonically open (ending on V) while the chorus is harmonically closed (ending on the tonic chord, I).

12.6 Practice Exercises

- For each song, fill in the beginning time for each section, label each section type (verse, pre-chorus, chorus, post-chorus, interlude, introduction, A, B, or C section, etc.), and the number of bars in each section of the form.

Table 12.6.1 Bahler, “She’s Out of My Life”

	Time: __ : __ __	Section Type: _____,	__ bars

Chapter 13

Phrases in Combination

13.1 The Perfect Authentic Cadence

We will now distinguish between two types of authentic (V–I) cadences: the Perfect Authentic Cadence (PAC) and the Imperfect Authentic Cadence (IAC).

The **Perfect Authentic Cadence** must meet three requirements:

1. V–I
2. Both chords in root position
3. Tonic scale degree ($\hat{1}$) in the highest voice of the tonic chord

both V & I are *in root position*

If at least one of these requirements is not met (one or both of the chords are inverted, tonic is not in the highest voice, or vii° occurs in place of V), the cadence is an **Imperfect Authentic Cadence** (IAC).

13.2 The Sentence

A **sentence** in music *is a phrase* with a specific melodic construction: a melodic idea (motive 1 or subphrase a) is either repeated or sequenced then followed by either related or unrelated material leading to a cadence.

In this first example, Mozart sequences motive 1 from measure 1 up a step in measure 2. Measure 3 contains related material and measure 4 contains cadential material.

A: I I/3rd V/3rd V7/5th vi⁷ V/3rd I ii/3rd I/5th V

Half Cadence

YT: vp_h649sZ9A

Figure 13.2.1 Sentence Structure in Mozart, K. 331, I

In the next example, Beethoven changes the intervals of subphrase a in measures 3–4 to fit the dominant harmony. He extracts motive 2 from subphrases a and a' in measures 5–6. Measures 7–8 lead to a half cadence.

f: i V⁷/3rd i vii^o/3rd i/3rd ii^o/3rd V

Half Cadence

YT: G8yuCJGWS20

Figure 13.2.2 Sentence Structure in Beethoven, Op. 2, No. 1, I

In the next example, unrelated material follows subphrase a and its repetition.

13.3 The Period

In music, a **period** consists of at least two phrases with the final phrase ending in a more conclusive cadence than the first phrase.

13.3.1 Conclusiveness of Cadence

Because period form involves “more conclusive” and “less conclusive” cadences, it is important to distinguish between inconclusive and conclusive cadences. Conclusive cadences end on the tonic chord, while inconclusive cadences do not.

<i>Inconclusive Cadences</i>	<i>Conclusive Cadences</i>
Deceptive Cadence (V–vi)	Authentic Cadence (V–I)
Half Cadence (ends on V)	Plagal Cadence (IV–I)

In addition, the **perfect authentic cadence** (PAC) is more conclusive than the imperfect authentic cadence (IAC). While the plagal cadence (PC) occurs less frequently than the other three cadences listed in the table above, it will sometimes occur in root position at the end of a phrase after an inverted imperfect authentic cadence (IAC) has concluded a previous phrase, with the understanding that a root position PC could be considered more conclusive than an inverted IAC.

Generally, a period will either contain a phrase ending in a half cadence (HC) followed by a phrase ending in an authentic cadence (IAC or PAC), or it will contain a phrase ending in an IAC following by a phrase ending in a PAC.

13.3.2 Examples of the “Less Conclusive-More Conclusive” Cadential Formula

In the first example, a HC concludes the first phrase and a PAC concludes the second phrase, making a period.

phrase a

p

I/5th V
(HC)

phrase a'

V⁷ I
(PAC)

YT: vp_h649sZ9A

Figure 13.3.1 Mozart, Piano Sonata K. 331, I

Here is a formal diagram of the above example.

Figure 13.3.2 Diagram of Mozart, K. 331, I, mm. 1-8

Notice that one or more phrases within a period can be a **sentence**, as in

the example above, since sentences are phrases with specific melodic structure.

In the next example, the first phrase concludes with an IAC and the second phrase concludes with a PAC.

The musical score is for Haydn's Piano Sonata in F Major, Hob. XVI:9, III. Scherzo. It consists of two phrases, 'phrase a' and 'phrase a'', in 2/4 time. 'phrase a' is marked with a bracket and ends with an IAC (Imperfect Authentic Cadence). 'phrase a'' is also marked with a bracket and ends with a PAC (Perfect Authentic Cadence). The score includes a YouTube icon and a QR code for further information.

Figure 13.3.4 Beethoven, Bagatelle in A minor, WoO 59, “Für Elise”

Another example with a less conclusive cadence followed by a more conclusive cadence is “Lean on Me” by Bill Withers.

YT: f0Z-MySzAac

Figure 13.3.5 “Lean on Me” by Bill Withers

13.3.3 Antecedents and Consequents

In a period, the phrase ending with the less conclusive cadence is called the “**antecedent**” and the phrase ending with the more conclusive cadence is called the “**consequent**.” These can be thought of as being in a “question and answer” relationship.

phrase a = "antecedent"

HC
(less conclusive)

phrase a' = "consequent"

PAC
(more conclusive)

YT: vp_h649sZ9A

Figure 13.3.6 Antecedent and Consequent in Mozart, Piano Sonata K. 331, I

13.3.4 Parallel and Contrasting Periods

Periods are labeled as “parallel” or “contrasting” based on the melodic material. In a **parallel period**, the melodies in both phrases begin similarly. In a **contrasting period**, the phrases begin differently.

The three preceding examples are parallel periods

The apostrophe mark (') is called “prime” and is used to show a phrase is similar to a previous phrase but ends with a different cadence. Therefore a' is called “a prime” and a” is called “a double prime.” If you are analyzing a piece that requires triple and quadruple primes, it is clearer to use a^1 , a^2 , a^3 , and so on.

Below is an example of a contrasting period.

Figure 13.3.9 Robert Schumann, Album for the Young, Op. 68, No. 17, “Little Morning Wanderer”

Figure 13.3.10 Formal diagram of the example above (“Little Morning Wanderer”)

In following two sections, we will examine periods containing more than two phrases.

13.4 The Asymmetrical Period

Asymmetrical periods consist of three or five phrases. In an asymmetrical period, there will be an unequal number of antecedents and consequents, hence the “asymmetry.” In the example below, there is one antecedent and two consequents.

The image displays three staves of musical notation for Chopin's Prelude Op. 28, No. 20, in C minor. The first staff, labeled 'phrase a', begins with a forte (*ff*) dynamic and ends with a half cadence (HC) marked 'V'. The second staff, labeled 'phrase b', starts with a piano (*p*) dynamic, includes a *ritenuto* marking, and concludes with a perfect authentic cadence (PAC) marked 'V⁷ i (PAC)'. The third staff, also labeled 'phrase b', begins with a pianissimo (*pp*) dynamic, features a *cresc.* (crescendo) marking, and ends with a perfect authentic cadence (PAC) marked 'V⁷ i (PAC)'. Brackets above the staves group the notes into phrases, and a large bracket below the first two staves groups them into a double period.

YT: UPptFNwQppA

Figure 13.4.1 Chopin, Prelude Op. 28, No. 20, in C minor

13.5 The Double Period

The Double Period. A **double period** consists of at least 4 phrases and is comprised of an **antecedent group** and a **consequent group**. The first two phrases in a double period are the antecedent group and the final two phrases are the consequent group, which ends with a cadence that “answers” the less conclusive cadence (or “question”) that ended the antecedent group.

The melodic scheme of *abab'* (four phrases) is commonly encountered in a double period. A double period with this melodic scheme would be described as a “*parallel* double period” because both the antecedent group and consequent

group begin with the same melody.

phrase a

phrase b

phrase a

phrase b'

Figure 13.5.1 Beethoven, Piano Sonata Op. 10, No. 1, II

Figure 13.5.2 Formal diagram of a double period (Beethoven, Op. 10, No. 1, II)

A double period will typically have one of the following cadential schemes:

Figure 13.5.3 Possible cadential schemes in a double period

Notice that the first two phrases of an antecedent group can consist of an IAC followed by a HC (“Scheme 3” in the above example). This may seem confusing if you are focused on analyzing phrases solely in groups of two instead considering how many phrases are in a section before analyzing the cadential scheme and the form.

13.5.1 Repeated Period

You may encounter a section consisting of four phrases that is not a double period but instead is a **repeated period**.

phrase a

phrase a'

phrase a (with ornamentation)

phrase a' (with ornamentation)

Figure 13.5.4 Beethoven, Piano Sonata Op. 53, I

Examine the difference between these two formal diagrams, noting the cadence after the *second* phrase in each:

Figure 13.5.5 Formal diagram of a repeated period (Beethoven, Op. 53, I)

Figure 13.5.6 Formal diagram of a double period (Beethoven, Op. 10, No. 1, II)

In the next section we will examine phrase combinations that are not periods.

13.6 Phrase Groups and Phrase Chains

Phrase groups and phrase chains are not periods. In phrase groups and phrase chains, *the final cadence is a half cadence*. A **phrase group** consists of at least two phrases whose melodies begin similarly and has the final phrase ending in a half cadence. The terminology in this section draws from Douglass Green's *Form in Tonal Music*.

13.8 Summary of Phrases in Combination

Table 13.8.1

<i>Number of Phrases</i>	<i>Form</i>	<i>Melodic Scheme</i>	<i>Cadence Info</i>
2 phrases	Parallel Period	$a\ a'$	Less conclusive then more conclusive
	Contrasting Period	$a\ b$	Less conclusive then more conclusive
	Phrase Group	$a\ a'$	Ends with HC
	Phrase Chain	$a\ b$	Ends with HC
	Repeated Phrase	$a\ a$	Same cadence twice
3 phrases	Asymmetrical period	$a\ a\ b$ or $a\ b\ b$	Ends with most conclusive
	Phrase group	$a\ a\ b$ or $a\ b\ b$	Ends with HC
	Phrase Chain	$a\ b\ c$	Ends with HC
4 phrases	Double Period	$a\ b\ a\ b'$ or $a\ a'\ a\ a''$ or $a\ a'\ a\ b$	HC–HC–HC–AC or IAC–IAC–IAC–PAC or IAC–HC–IAC–PAC
	Repeated period	$a\ b\ a\ b$ or $a\ b\ a\ c$ or $a\ a'\ a\ a'$	Less conclusive then more conclusive formula repeated

13.9 Practice Exercises

- For the following excerpt (“Ein Mädchen oder Weibchen,” from Mozart’s *Magic Flute*), do the following:
 - Label chords with Roman numerals at the ends of phrases to determine cadences
 - Label cadences by type (PAC, IAC, HC, PC, DC)
 - Examine the motivic structure to determine if a phrase is a sentence
 - Create a diagram of the form using cadence abbreviations (HC, DC, PC, IAC, and PAC) and letters to designate melody (a , a' , b , etc.). Use the “prime” symbol (') to show if a melody ends with a different cadence. In this chapter, the prime symbol should not be used to represent embellishment of the melody or changes in the harmonization or register.
 - Name the form of the excerpt (sentence, parallel period, contrasting period, asymmetrical period, parallel double period, repeated phrase, repeated period).

F:

YT: CI0hJLioGF0

Figure 13.9.1

2. For the following excerpt (the first movement Mozart's K. 333), do the following:
 - Label chords with Roman numerals at the ends of phrases to determine cadences
 - Label cadences by type (PAC, IAC, HC, PC, DC)
 - Examine the motivic structure to determine if a phrase is a sentence
 - Create a diagram of the form using cadence abbreviations (HC, DC, PC, IAC, and PAC) and letters to designate melody (*a*, *a'*, *b*, etc.). Use the “prime” symbol (') to show if a melody ends with a different cadence. In this chapter, the prime symbol should not be used to represent embellishment of the melody or changes in the harmonization or register.
 - Name the form of the excerpt (sentence, parallel period, contrasting period, asymmetrical period, parallel double period, repeated phrase, repeated period).

Bb:

The image displays three staves of musical notation in G minor (one flat). The first staff shows a sequence of eighth and sixteenth notes in both hands, with a trill in the right hand at the end. The second staff features a more complex melodic line in the right hand with slurs and ties, and a simpler bass line. The third staff contains a rapid sixteenth-note run in the right hand, a trill, and a final sixteenth-note flourish. Below the staves is a YouTube logo and a QR code, with the text 'YT: Pm03Wlono6w' underneath.

Chapter 14

Accompanimental Textures

In this chapter we will focus on common accompanimental textures. This chapter does not make an attempt to catalog every known accompanimental texture. Instead, it is meant to encourage you to listen to texture more closely and increase your musical awareness.

14.1 Texture

We will consider **texture** in terms of vertical and horizontal elements. The vertical nature of texture relates to the number of notes occurring simultaneously as harmonies. It could also relate to the number of voices or instruments performing melodies simultaneously in a contrapuntal texture. The horizontal element of texture relates to rhythmic activity: is the most common rhythmic value in a passage a slow or fast one?

To illustrate, here is a texture with chords (vertical elements) containing five voices with a melody (a sixth voice) above. Notice that the texture has slow rhythmic values on the horizontal plane.

YT: b8G9vRqq3RI

Figure 14.1.1 Barber, *Adagio for Strings*

Our second example is an excerpt for four instruments—a string quartet. While this a four-voice texture, it is full of rhythmic activity. The most common rhythmic value is the sixteenth note, and the syncopated figures in measures 3–4 of the Violin I part and measures 5–6 of the Viola part add to the textural complexity.

YT: rLLYRLqU168

Figure 14.1.2 Mozart, String Quartet K. 428, IV

In the following sections, we will examine fairly straightforward melody-and-accompaniment textures in classical and popular music. In later chapters we will explore more complex textures.

14.2 Chorale Texture

Chorale textures are those in which there is a chord for every (or nearly every) melody note. A familiar example of chorale texture is the “Star-Spangled Banner.”

YT: uBS-F944zYc

Figure 14.2.1 Francis Scott Key and John Stafford Smith, “The Star-Spangled Banner”

In the following example by Schubert, the melody at times moves in a slightly different rhythm than the chords below.

YT: 2n2YIxXJXac

Figure 14.2.2 Schubert, *Winterreise*, D.911, “Die Nebensonnen”

Chorale textures are also described as “homorhythmic” because all of the parts move in the same rhythm.

YT: Z0WDRq0xNtQ

Figure 14.2.3 Bhasker, Ruess, Dost, Antonoff, “Some Nights”

In the next section we will examine arpeggiated accompaniments.

14.3 Arpeggiated Accompaniments

14.3.1 Arpeggios

One way to express chords rhythmically is through arpeggios in one part and a bass line in octaves in a lower part, as in the following example from Beethoven's *Moonlight Sonata*.

The musical score for Beethoven's *Moonlight Sonata*, Op. 27, No. 2, I, shows two systems of piano accompaniment. The first system features a treble staff with a continuous arpeggiated line of eighth notes, marked with triplets and the instruction *sempre pp e senza sordini*. The bass staff has a single octave note. The second system continues the arpeggiated line and adds a descending bass line, marked with the instruction *simile*.

YT: 4Tr0otuiQuU

Figure 14.3.1 Beethoven, *Moonlight Sonata*, Op. 27, No. 2, I

The next example has descending arpeggios.

The musical score for Alicia Keys' "If I Ain't Got You" shows two systems of piano accompaniment. The first system features a treble staff with a descending arpeggiated line of eighth notes, marked with triplets, and a bass staff with a single octave note. The second system continues the descending arpeggiated line and adds a descending bass line. The key signature is one sharp (F#) and the time signature is 3/4. The first system is labeled Cmaj7 and the second system is labeled Bm7.

YT: Ju8Hr50Ckww

Figure 14.3.2 Keys, "If I Ain't Got You"

Notice that in both the Beethoven and Alicia Keys examples there is the harmonious interval of a tenth (an octave plus a third) between the bass (lowest) voice and the soprano (highest) voice.

The following examples have arpeggios that ascend and descend through a chord.

Figure 14.3.3 shows a musical score for Pankow's "Colour My World". The score is in 12/8 time and features a piano accompaniment. The key signature has one flat (B-flat). The melody is in the right hand, and the bass line is in the left hand. The chords are Fmaj7 and Am.

YT: cWkXmx-0phc

Figure 14.3.3 Pankow, "Colour My World"

Figure 14.3.4 shows a musical score for Ball, Angel, and Fenty's "Love on the Brain". The score is in 12/8 time and features a piano accompaniment. The key signature has one sharp (F-sharp). The melody is in the right hand, and the bass line is in the left hand. The chords are G and Am.

YT: zA-upjFaHvw

Figure 14.3.4 Ball, Angel, and Fenty, "Love on the Brain"

Notice in the above example that there is also an organ playing block chords to create a sense of legato in the texture.

The next two examples are from more recent popular music.

Figure 14.3.5 shows a musical score for Adkins and Wilson's "Someone Like You". The score is in 4/4 time and features a piano accompaniment. The key signature has two sharps (F-sharp and C-sharp). The melody is in the right hand, and the bass line is in the left hand. The chords are A, E, F#m, and D. The lyrics are: "Ne-ver mind I'll find some-one like ____ you ____ I wish".

YT: hLQl3WQoQ0

Figure 14.4.27 Bareilles, “Love Song”

In the next section, we will examine accompanimental textures consisting of afterbeats and offbeats.

14.5 Afterbeats and Offbeats

14.5.1 Afterbeats

The term “afterbeats” is from *Fundamentals of Musical Composition* by noted composer and pedagogue Arnold Schoenberg. “**Afterbeats**” are repeated chords (usually eighth notes, sometimes quarter notes) that occur after the downbeat.

sempre piano e dolce

YT: pfwIAozfjoI

Figure 14.5.1 Beethoven, Piano Sonata Op. 2, No. 1, IV

In the next example, the afterbeats are not repeated chords but instead are passing-tone figures harmonized in thirds.

YT: Zixd0Zh7zo4

Figure 14.5.2 Mozart, Piano Sonata K. 279, III

14.5.2 Offbeats

Offbeats are typically chords that occur regularly on upbeats, avoiding downbeats. While there are many styles of music that use chordal offbeats, in this

section we will consider only polka and reggae styles.

14.5.2.1 Polka

The polka, which originated in Bohemia, has connotations with Germany and *Oktoberfest*. The polka in the United States is often associated with Frankie Yankovic, who was known as the “Polka King.”

Accordion

Piano & Ac. Bass

YT: jF-5zBjEIDM

Figure 14.5.3 Vejvoda, “Beer Barrel Polka”

14.5.2.2 Reggae

Reggae is associated with the island of Jamaica and, in the most elemental sense, is characterized by offbeats, often played on an electric guitar. Bob Marley is closely associated with reggae music.

14.6 The 3–2 Clavé

The 3–2 clavé (and the 2–3 clavé) are essential rhythmic elements in Afro-Cuban music. In this section we will see how cross rhythms implied by the 3–2 clavé can be viewed as a possible source of cross rhythms in popular music. Here is a video demonstration of a 3–2 clavé.

YouTube: <https://www.youtube.com/watch?v=dxVeiPQ1juo>

Here is rhythmic notation of a 3-2 clavé. Notice there are three attacks in the first measure and 2 attacks in the second bar.

The rhythm underlying the first bar is 3+3+2.

The 3-2 Clavé has also been called the “Bo Diddley Beat” because of its use by Bo Diddley in the 1950s. Look at the rhythms shown above as you listen to the following examples.

YT: pAgnJDJN4VA

Figure 14.7.12 A. Young, M. Young, and Johnson, “Back in Black” (1980)

This chapter is meant to give you ideas about animating chords and chord progressions with accompanimental textures, including riffs. It is by no means meant to be exhaustive, but rather to encourage you to listen closely to texture and accompaniment.

Chapter 15

Creating Contrast Between Sections

In this chapter, we will explore how a composer or arranger can create contrast between different sections in a piece of music.

15.1 The Elements of Music

Creating contrast usually involves varying one or more of the “Elements of Music,” which are listed and explained below.

Table 15.1.1 The “Elements of Music”

<i>Melody</i>	We all know what melody is, but don’t confuse melody with ostinato! Melody lives and breathes and has variety.
<i>Harmony</i>	In this section, we will associate harmony with key and mode (major versus minor).
<i>Rhythm</i>	What the most common rhythmic value is in a section.
<i>Timbre</i>	The different tone colors of different instruments, and the different tone colors an individual instrument can produce.
<i>Texture</i>	Described in the previous chapter as existing in the vertical plane (the number of voices) and the horizontal plane (rhythmic activity of the various voices).
<i>Articulation</i>	Staccato versus legato, or short, clipped notes versus long, sustained or connected notes.
<i>Dynamics</i>	Loud versus soft.
<i>Register</i>	High versus middle versus low.

In the next two sections we will look at how two different pieces exhibit contrast between various sections using the elements of music.

15.2 Mozart, *Eine kleine Nachtmusik*, K. 525, II.

The second movement of Mozart’s *Eine kleine Nachtmusik* is a five-part **rondo form** (ABACA).

Let us examine the elements of music in the first section (the A section).

Violino I

Violino II

Viola

Violoncello e Contrabasso

YT: o1FSN8_pp_o

Figure 15.2.1

Notice how Mozart expresses the various musical elements:

Table 15.2.2 A Section, Second Movement, *Eine kleine Nachtmusik*

<i>Harmony</i>	The key is C major
<i>Rhythm</i>	The 8th note is most common rhythmic value, though the phrase begins with quarter-note values
<i>Texture</i>	The top two instruments are grouped together against a simple bass part
<i>Articulation</i>	Generally legato
<i>Dynamics</i>	Soft
<i>Register</i>	Neither extremely high nor low

Here is the beginning of the second section (the B section):

YT: o1FSN8_pp_o

Figure 15.2.3 B Section, Second Movement, *Eine kleine Nachtmusik*

Here are the most noticeable differences:

Table 15.2.4 B Section, Second Movement, *Eine kleine Nachtmusik*

<i>Rhythm</i>	8th notes are the most common rhythmic value, with some 16th-note runs
<i>Texture</i>	All four voices move in the same rhythm at the beginning of each subphrase
<i>Articulation</i>	Four staccato notes start each subphrase

Now, look at the beginning of the next contrasting section (the C section):

YT: o1FSN8_pp_o

Figure 15.2.5 C Section, Second Movement, *Eine kleine Nachtmusik*

The following elements are noticeably changed:

Table 15.2.6 C Section, Second Movement, *Eine kleine Nachtmusik*

Harmony	This section begins in C minor
Rhythm	The accompaniment moves in 16th notes and the ornamentation of the second melody note (the turn) in the outer parts sounds as four 32nd notes
Texture	The middle two parts (Violin II and Viola) are paired together and the Violin I and Cello/Bass part engage in imitation
Articulation	The middle parts are played in a “separated” manner (more staccato than legato) and the motive in the outer voices starts with a staccato note

Listen to how Mozart puts the entire form together, including transitional material to smooth out the changes from one section to another.

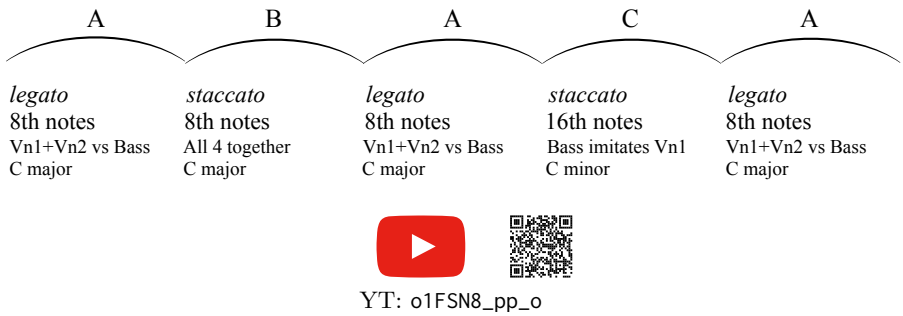

Figure 15.2.7 Formal Diagram of Second Movement, *Eine kleine Nachtmusik*

15.3 “Rude” by MAGIC!

Now we will examine contrast in recent popular music. Here is the musical example of the texture from the reggae section of this song, as seen in the previous chapter.

G♭A♭D♭B♭m A♭

Muted Elec. Gtr.

Elec. Gtr.

Elec. Bass

D♭: IVV I vi V

In Verse 1 there is no bass drum, snare drum, or electric bass. All we hear are the voice part and the two guitar parts from the top two staves in

the example above. There are fewer voices occurring on the vertical plane, creating a light texture.

Figure 15.3.1 Verse 1 of “Rude”

The bass guitar and drum groove enter in Verse 2, thickening the texture and adding the backbeat of the snare drum.

Figure 15.3.2 Verse 2 of “Rude”

In the pre-chorus, the guitars and bass have legato half notes and quarter notes while the drummer plays cross-stick eighth notes (if one is counting in a slow $\frac{4}{4}$). Without the snare drum backbeat, the texture lightens.

Figure 15.3.3 Pre-Chorus of “Rude”

The chorus has approximately the same accompaniment as Verse 2 but the voice parts are in a higher register, repeating a 2-measure subphrase containing the “hook.”

Figure 15.3.4 Chorus of “Rude”

The post-chorus emphasizes a $(3+3+2)+(3+3+2)$ rhythm on all instruments (guitars, bass, and the bass drum, snare drum, and hi-hat of the drum set).

Figure 15.3.5 Post-Chorus of “Rude”

Below is a formal diagram of the first five sections of “Rude.”

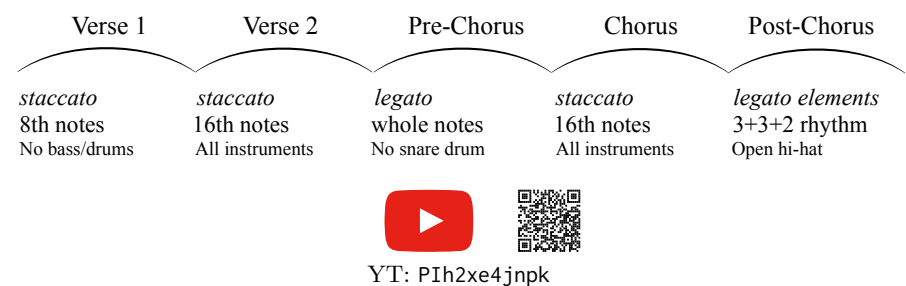

Figure 15.3.6 First 5 Sections of “Rude”

This five-section unit repeats again with Verse 3, Verse 4, the Pre-Chorus, Chorus, and Post-Chorus.

When you listen to the entire piece, you hear how the musicians designate the form using the elements of articulation, rhythm, texture, and dynamics. One element that changes very little during entire song is the chord progression, which we examined in the chapter on harmonic progression.

<

Chapter 16

Figured Bass

16.1 Historical Context

In the Baroque era in music (roughly 1600–1750 C.E.), a shorthand was developed for writing chords. (Lead-sheet symbols are the modern shorthand for representing chords). **Figured bass** (also known as **thoroughbass**) consists of a bass line notated on a staff accompanied by numbers representing intervals to be played above the bass note within the key signature. (These figured-bass numbers are traditionally notated below the bass line.)

Figure 16.1.1 Handel's handwritten manuscript of Recorder Sonata in A minor, HWV 362, I. Larghetto

Figure 16.1.2 Handel, Recorder Sonata in A minor, HWV 362, I. Larghetto, without figured bass realization

YT: ljj6URbk8Xg

Figure 16.1.3 Handel, Recorder Sonata in A minor, HWV 362, I. Larghetto, with figured bass realization

Like lead-sheet symbols, figured bass allowed a keyboardist or guitarist freedom in choosing chord voicings. While some early music specialists perform from scores with the original notation, editions of Baroque compositions by composers like J.S. Bach and Handel that were originally notated with figured bass have been “realized” or written out in modern editions.

In the present day, figured bass is taught in music theory courses primarily as a shorthand for chord inversion symbols (although many music programs also endeavor to teach students to perform at the piano music written with figured bass notation).

16.2 Figured Bass Inversion Symbols

Following are the figured bass inversion symbols most commonly used for triads and seventh chords. (Remember that figured bass numbers represent intervals above the bass note within the key signature.)

For Triads:		6	6 4
	Root is the bass note.	3rd of the triad is the bass note.	5th of the triad is the bass note.

Figure 16.2.1 Figured Bass Inversion Symbols for Triads

For Seventh Chords:	7	Root of the seventh chord is the bass note.
	6 5	The 3rd of the seventh chord is the bass note.
	4 3	The 5th of the seventh chord is the bass note.
	4 2	The 7th of the seventh chord is the bass note.

Figure 16.2.2 Figured Bass Inversion Symbols for Seventh Chords

Unlike original figured bass notation in the Baroque era, in music theory courses, figured bass inversion symbols are placed after Roman numerals.

Compare figured bass symbols to the modified slash notation we have been using in previous chapters.

C	C/E	C/G	Am ⁷	Am ⁷ /C	Am ⁷ /E	Am ⁷ /G
C: I	I ⁶	I ⁶ ₄	vi ⁷	vi ⁶ ₅	vi ⁴ ₃	vi ⁴ ₂
C: I	I/3rd	I/5th	vi ⁷	vi ⁷ /3rd	vi ⁷ /5th	vi ⁷ /7th

Figure 16.2.3 Roman Numerals with Figured Bass versus Roman Numerals with Modified Slash Notation

Because the figures $\frac{6}{5}$, $\frac{4}{3}$, and $\frac{4}{2}$ are only used for seventh chords, the “7” is omitted when labeling inverted seventh chords.

C: V⁶₅

Figure 16.2.4 “7” is not included when 7th chords are inverted

Notice that it is essential with seventh chords to include symbols like “M” (for a major seventh chord) and $^{\circ}$ and $^{\flat}$ *before* the figured bass numbers and *after* the Roman numeral.

Figure 16.2.5

16.3 The Cadential Six-Four Chord

A common term in music theory—the “**cadential six-four**” (or cadential I_4^6)—is used to refer to the I_4^6 that regularly proceeds the V chord in cadences.

YT: vp_h649sZ9A

Figure 16.3.1 Mozart, Piano Sonata K. 331, I

F B \flat /D F B \flat B \flat /D Gm C \flat 7/G \flat B \flat /F F7 B \flat

O'er the land of the free and the home of the brave!

B \flat : I \flat $\frac{6}{4}$ V \flat 7 I
(Cadential $\frac{6}{4}$)

YT: LGvW6jHUHiY

Figure 16.3.2 Francis Scott Key and John Stafford Smith, “The Star-Spangled Banner”

It is worth remembering that the cadential $\frac{6}{4}$ (or I $\frac{6}{4}$) has **dominant function**, just like the V chord that usually follows it. Previously, we have called this chord “I/5th.”

We will use the term “cadential six-four” throughout the rest of this text, now that figured bass has been introduced.

16.4 Other Occurrences of Six-Four Chords

Second-inversion chords with the fifth of the chord in the bass, also known as $\frac{6}{4}$ chords, are special chords found only in four situations in Classical music.

1. Cadential six-four (discussed in the previous section)
2. Passing six-four: the bass line will look like a passing-tone figure, with three stepwise ascending or descending notes, and the middle chord will be a $\frac{6}{4}$ chord

C: I V $\frac{6}{4}$ I $\frac{6}{4}$
(passing $\frac{6}{4}$)

3. Pedal six-four: the bassline will consist of three repeated notes, and the middle chord will be a $\frac{6}{4}$ chord.

C: I IV $\frac{6}{4}$ I
(pedal $\frac{6}{4}$)

4. Melodic bass six-four: in this situation, the bass voice has the melody; when the fifth of the chord occurs in this bass voice melody, the result will be a $\frac{6}{4}$ chord.

16.5 Additional Information

Though we will not use them in our harmonic analyses, you will sometimes encounter figured bass symbols containing all of the intervals above the bass note in Baroque music containing figured bass. The common figured bass inversion symbols in the sections above are abbreviations of the figures given in the examples below.

Figure 16.5.1 “Full” Figured Bass symbols showing *every* interval above the lowest note

Additionally, you may notice that figured bass numbers in actual music (but not in Roman numeral labeling) *may be altered chromatically* with the following symbols.

accidentals without numbers refer to the 3rd above bass

4 with + and 6 with a slash through it mean raise those intervals above the bass

accidentals before a number affect that interval above the bass

Figure 16.5.2 Figured Bass with Chromatic Alterations

16.6 Practice Exercises

1. Analyze the triads with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below the staff.

C: 1 2 3 4

2. Analyze the seventh chords with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below the staff.

C: 1 2 3 4

3. Label the given chords using lead-sheet symbols above and Roman numerals with figured bass inversion symbols below.

Lead-sheet:

Rom. num.: 1. c: _____ 2. b: _____ 3. F: _____ 4. D: _____

4. Write the specified chords. Analyze the chords with lead-sheet symbols. Include key signatures.

1. E: IV⁶ 2. c: ii^{ø4}₃ 3. G: V⁶₅ 4. d: vii^{ø6}

5. Analyze the excerpt using Roman numerals with figured bass inversion symbols below and lead-sheet symbols above. Analyze non-chord tones.

Lead-sheet: _____

C: _____

The image shows a musical score for a chorale in 4/4 time. The score is written for a grand staff (treble and bass clefs). The melody is in the treble clef, and the bass line is in the bass clef. The key signature is one flat (B-flat). The score consists of two measures. The first measure contains a melody in the treble and a bass line in the bass. The second measure contains a final chord in the treble and a final note in the bass. The score is labeled 'Lead-sheet' and 'C:'.

Chapter 17

Secondary Dominant Chords

So far we have studied **diatonic harmony** (chords without accidentals, with the exception of the use of raised $\hat{6}$ and $\hat{7}$ in minor, which are considered diatonic). In the following chapters, we will study *chromatic* harmony.

17.1 Examples with Secondary Dominants

Secondary dominants are common in classical and popular music. Here are examples with the chromatic chords noted. We will examine these chords more closely later in the chapter.

The image shows a musical score for Paul McCartney's "Yesterday" (1965). The score is in 4/4 time and B-flat major. The melody is in the treble clef, and the bass line is in the bass clef. The lyrics are "I be - lieve in yes - ter - day." The bass line features several secondary dominant chords, which are highlighted with a box and a bracket. These chords are: F#m7b9 (secondary dominant of Bbm7), G7 (secondary dominant of Fm7), and A7 (secondary dominant of Ebm7). The chords are marked with a box and a bracket, and the notes are written as whole notes.

Figure 17.1.1 Paul McCartney, “Yesterday” (1965)

pp

YT: JRXIDepquCg

Figure 17.1.7 Tchaikovsky, *The Nutcracker*, “Miniature Overture” (1892)

17.2 Tonicization

In this chapter and the next, we will study **tonicization**, which means treating a chord *other* than the I chord like a tonic by approaching it with its dominant. In diatonic harmony, the V chord (the dominant) resolves to the I chord (the

tonic). A *secondary* dominant is a major triad or dominant seventh chord that resolves to (or *tonicizes*) a chord other than the I chord.

G^7/B C $A^7/C^\#$ Dm $B^7/D^\#$ Em C^7/E F $D^7/F^\#$ G $E^7/G^\#$ Am G^7/B C

$C:$ V_5^6 I V_5^6/ii ii V_5^6/iii iii V_5^6/IV IV V_5^6/V V V_5^6/vi vi V_5^6 I

Figure 17.2.1

Sing the bass line of the example above and notice that a secondary chord, through its chromaticism, intensifies the drive to the next chord.

Principle 17.2.2 Secondary Dominants. *The Roman numeral after the slash is the chord being tonicized by the V chord before the slash.*

You may find that you want to analyze the $D^7/F^\#$ in the example above as a II_5^6 instead of a V_5^6/V (which we pronounce as “ V_5^6 of V ”), and the $E^7/G^\#$ as a III_5^6 instead of V_5^6/vi (“ V_5^6 of vi ”). Notice, however, that a ii chord is typically minor in a major key and diminished in a minor key (ii°), making uppercase II a chromatic harmony for which the proper label is V/V .

D^7 E^7 A^7 B^7 C^7

In C major
Label as V^7/V V^7/vi V^7/ii V^7/iii V^7/IV
Not as II^7 III^7 VI^7 VII^7 I^7

Figure 17.2.3

While labeling D^7 as II^7 in C major makes the root clear, it does not communicate the function of the D^7 , which is to progress to a G major chord (the V chord, or the dominant in C major).

Also, notice that the vii° is not tonicized with its secondary dominant in the example above. Listen to the following example to understand why diminished chords such as vii° and ii° in minor are not tonicized.

$F^\#7$ B°

$C:$ V^7/vii° vii°
(not recommended)

Figure 17.2.4

17.3 Secondary Dominants in Major and Minor

Both major triads and major–minor seventh chords can be secondary dominant chords.

Figure 17.3.1 Secondary Dominant Triads in Major

Figure 17.3.2 Secondary Dominant Seventh Chords in Major

Notice the chromaticisms in the example above. The raised notes generally act as the leading-tone to the root of the chord being tonicized. In the major mode, the only secondary dominant with a lowered chromaticism is V^7/IV . The lowered note in V^7/IV acts as $\hat{4}$ of the chord being tonicized in the same way the last flat of a key signature is $\hat{4}$.

Below are all secondary dominant chords (triads and major–minor seventh chords) in the minor mode.

Figure 17.3.3 Secondary Dominant Triads in Minor

Figure 17.3.4 Secondary Dominant Seventh Chords in Minor

Remember that both vii° (on raised $\hat{7}$) and the **subtonic VII** (on the lowered $\hat{7}$) occur in the minor mode. The subtonic VII can be tonicized with V^7/VII , while vii° , being diminished, cannot.

Notice that an F major chord in C minor can be V/VII or IV , depending on how it functions or progresses. If the F major chord progresses to a B^\flat chord, label the F chord as V/VII . If the F major chord has **pre-dominant function** and progresses to a G major chord (in any inversion) or B° , label the F chord as IV .

The $B^\flat 7$ chord, on the other hand, can be labeled correctly as V^7/III or VII^7 because both V^7/III or VII^7 progress to III in minor.

17.4 Analyzing Secondary Dominants

When you encounter a chord with a chromaticism and suspect it is a secondary dominant, use the following process.

1. Stack the chord in thirds to determine the root and quality. If the chord quality is major (if a triad) or a major–minor seventh chord, go on to step 2. If the chord quality is not major or major–minor seventh, the chord is not a secondary dominant.

The chord in question is an F# major triad in first inversion.

2. Determine the note that would be a perfect 5th below the *root* of the chord you are analyzing. If this note would be the root of a diatonic chord, the chord you are analyzing is a secondary dominant.

Since B is $\hat{5}$, the F# major chord in first inversion is tonicizing V. Therefore the chord is V^6/V .

17.5 Writing Secondary Dominants

To write a secondary dominant, use the following procedure.

1. First determine the note that is the root of the chord being tonicized (the chord to the right of the slash).

2. Determine the root of the V^7 in the key of B \flat (the Roman numeral *after* the slash): F
3. Build a major–minor seventh chord on F: F–A–C–E \flat
4. Invert the chord accordingly. $\frac{4}{3}$ inversion means the fifth of the chord is in the bass.

17.6 Irregular Resolutions of Secondary Chords

The roots of secondary dominants do not always resolve down a perfect fifth to the tonicized chord. In many of the examples of popular music with secondary dominants at the beginning of this chapter, the secondary dominants resolve deceptively.

F: vi^7 V/V IV I

Figure 17.6.1 Paul McCartney, “Yesterday” (1965)

In “Yesterday,” the V/V resolves not to V but to IV, which sometimes acts as a substitute for the V chord (the dominant) in popular music.

This progression also happens in “Forget You,” where a V^7/V resolves to a IV chord.

C: I V^7/V IV I

YT: awVi2QXC0ZE

Figure 17.6.2 Bruno Mars, CeeLo Green, Philip Lawrence, and Ari Levine, “Forget You” (2010)

In “I Want You to Want Me” by Cheap Trick, the V/V chord resolves to a subtonic $\flat VII$ chord in A major.

shine up my old brown shoes. I'll put on my brand new shirt

A: vi7 V/V \flat VII I

YT: -qgpewMCVjs

Figure 17.6.3 Rick Nielson, “I Want You to Want Me” (1977)

Remember, however, that the subtonic \flat VII in major can act as a substitute for the dominant (see the [Harmonic Flowchart for Popular Music with Subtonic VII chord in Major](#)).

In “Baby Love” by the Supremes, a C^7/B^\flat in C major (V_2^4/IV) resolves to an A^7 chord (V^7/ii), which then resolves to ii (Dm). In this example, notice that the B^\flat in the C^7/B^\flat is a lowered chromatic note that wants to resolve downward by half step to A . Instead of this A being the third of the IV chord (an F major chord), which is the traditional and expected resolution, it is the root of an A^7 chord (V^7/ii).

Ba - by love, my ba - by love, I need you oh how I need you

C: I V_2^4/IV V^7/ii ii^7

YT: 9_y6nFjoVp4

Figure 17.6.4 Lamont Dozier, Brian Holland, and Eddie Holland, “Baby Love” (1964)

Finally, a rather common deceptive resolution of a secondary dominant is V^7/vi to IV , which can be seen in the following three examples.

G B

I've had no - thing to live _____ for _____ And look like

G: I V/vi

C A

no - thin's gon - na come my _____ way So _____ I'm just gon'

IV V/V

YT: rTVjnBo96Ug

Figure 17.6.5 Steve Cropper and Otis Redding, “(Sittin’ On) The Dock of the Bay” (1967)

F G C E E⁷ F G C E E⁷

C: IV V I V/vi V⁷/vi IV V I V/vi V⁷/vi

YT: rAn-AWxtHv0

Figure 17.6.6 John Lennon, “Imagine” (1971)

E: I V vi V^7/vi IV

YT: lbbIMw6k1cU

Figure 17.6.7 Beethoven, Piano Sonata Op. 53, I (1804)

There are two ways to conceptualize this progression. The first is that the progression of iii to IV (Em to F in C major) is not unusual, so E to F, which appears to be III to IV but is in fact V/vi to IV, is a chromatic modification of iii to IV. The other way to think of V/vi to IV is as V/vi to VI/vi, a deceptive progression within the submediant area.

We can conclude that secondary chords do not always resolve strictly to the chords they appear to be tonicizing.

17.7 Practice Exercises

Day One:

1. Analyze the following secondary dominants. Include lead-sheet symbols above.

Lead-sheet:

b: 1 F: 2 c: 3 G: 4 E: 5 f: 6

2. Write the following secondary dominants. Include lead-sheet symbols above. Include key signatures.

1. Eb: V/ii 2. g: V⁷/VI 3. e: V⁴₂/iv 4. A: V⁶/ii

3. On the empty staff below, copy the notes from the upper staff to the lower staff while adding the specified **non-chord tones**. (Note: LNT = lower neighbor tone; UNT = upper neighbor tone.) Realize the lead-sheet symbols using **quarter-note accompanimental texture**. Below the lower staff, analyze the chords using Roman numerals with figured bass inversion symbols.

Cm Fm D⁷/F[#] G

Rom. num.: _____ _____ _____ _____

Day Two:

4. Approach each chord with its secondary dominant seventh chord (whose root lies a perfect 5th above the root of the chord of resolution). Label chords with Roman numerals below and lead-sheet symbols above.

C: _____ V⁷/_____ V⁷/_____ V⁷/_____

C: _____ V⁷/_____ V⁷/_____ V⁷/_____

5. For the following example, alter the given motives as specified. Add an accompanimental texture of [afterbeats](#). Analyze the Roman numerals with figured bass inversion symbols below the staff.

F Dm G⁷/B C

F: _____

Click [here](#) to download the second homework assignment for this chapter.

Chapter 18

Secondary Diminished Chords

18.1 Secondary Diminished Chords

The vii° chord has dominant function (see the [Harmonic Function Flowchart](#)). Since chords of dominant function typically resolve to chords of tonic function, diminished triads as well as half-diminished and fully-diminished seventh chords occur as secondary diminished chords.

$B^{\flat 7}$ C $C^{\sharp o 7}$ Dm $D^{\sharp o 7}$ Em $E^{\flat o 7}$ F $F^{\sharp o 7}$ G $G^{\sharp o 7}$ Am $B^{\flat 7}$ C

C: $\text{vii}^{\circ 7}$ I $\text{vii}^{\circ 7}/\text{ii}$ ii $\text{vii}^{\circ 7}/\text{iii}$ iii $\text{vii}^{\circ 7}/\text{IV}$ IV $\text{vii}^{\circ 7}/\text{V}$ V $\text{vii}^{\circ 7}/\text{vi}$ vi $\text{vii}^{\circ 7}$ I

Figure 18.1.1 A Harmonic Sequence with Secondary Diminished Chords in C major

Below are some examples of pieces with secondary diminished chords. Notice that chromaticism is an “essential” part of secondary diminished chords (“non-essential” chromaticism refers to chromatic non-chord tones).

YT: 9ayLUAWmatk

Figure 18.1.2 J.S. Bach, *Herz und Mund und Tat und Leben* BWV 147, X. “Jesus bleibet Freude” (“Jesu, Joy of Man’s Desiring”) (1723)

Figure 18.1.3 Tchaikovsky, *The Nutcracker*, “Trepak” (1892)

YT: HaA3YZ6QdJU

Figure 18.1.4 Billy Joel, “Just the Way You Are” (1977)

YT: Cw16cySo65Y

Figure 18.1.5 Dewayne Blackwell and Earl Bud Lee, “Friends in Low Places” (1990)

18.2 Secondary Diminished Chords in Major and Minor

Below are the secondary diminished chords that occur in major and minor.

Figure 18.2.1 Secondary Diminished Triads and Seventh Chords in Major

Figure 18.2.2 Secondary Diminished Triads and Seventh Chords in Minor

Notice that $\text{vii}^\circ/\text{III}$ in minor is not included because it is ii° . Notice also that $\text{vii}^{\circ 7}/\text{III}$ has no accidentals—it is the same as $\text{ii}^{\circ 7}$ but functions differently. The $\text{ii}^{\circ 7}$ chord has **pre-dominant function** and progresses to V whereas the $\text{vii}^{\circ 7}/\text{III}$ chord progresses to III.

Minor triads are tonicized by fully diminished seventh chords. Major triads are traditionally tonicized by half-diminished seventh chords but can also be tonicized by fully diminished seventh chords.

18.3 Analyzing Secondary Diminished Chords

When you encounter a chord with a chromaticism and suspect it is a secondary diminished seventh chord, use the following process.

1. Stack the chord in thirds to determine the root and quality. If the chord quality is a diminished triad or a half-diminished and fully-diminished seventh chord, go on to step 2. If the chord quality is not a diminished triad or a half-diminished and fully-diminished seventh chord, the chord is not a secondary diminished chord.

The chord in question is an $\text{G}\sharp$ half-diminished seventh chord in first inversion.

2. Determine the note that would be a *minor 2nd above* the root of the chord you are analyzing. If this note of resolution would be the root of a diatonic chord, the chord you are analyzing is a secondary diminished chord.

This $G^{\#7}/B$ is analyzed as $vii^{\circ 6}_5/V$ in D major.

18.4 Writing Secondary Diminished Chords

To write a secondary diminished chord, use the following procedure.

1. First determine the note that is the root of the chord being tonicized (the chord to the right of the slash).

g: $vii^{\circ 4}_2/iv$ \rightarrow $\hat{4}$ is C

2. Determine $vii^{\circ 7}$ in the key of C minor (C is the root of the iv chord, which is the Roman numeral *after* the slash): B is the root of $vii^{\circ 7}$ in C minor because it is a *m2 below* C.
3. Build a fully-diminished seventh chord on B: $B-D-F-A^b$
4. Invert the chord accordingly. $\frac{4}{2}$ inversion means the 7th of the chord (A^b) is the bass note.

18.5 Practice Exercises

1. Analyze the following secondary diminished chords with lead-sheet symbols above and Roman numerals with figured bass symbols below.

Lead-sheet: _____

D: _____ g: _____ Eb: _____ Db: _____ c#: _____ Ab: _____

1 2 3 4 5 6

2. Write the following secondary diminished chords. Include lead-sheet symbols above. Include key signatures.

1. Ab: vii^{o7}/vi 2. c: vii^{o6}₅/V 3. e: vii^{o4}₃/III 4. B: vii^{o4}₂/ii

3. Analyze the following excerpt with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below. Analyze non-chord tones in parentheses.

We'll keep on fight-ing till the end

F: 1 2 3 4 5 6

YT: 04854XqcfCY

Chapter 19

Mode Mixture

19.1 Mode Mixture

Mode mixture typically consists of borrowing chords from the parallel minor during a passage in a major key. “**Borrowed chords**” refers to borrowing chords from minor and is synonymous with mode mixture. In the examples that follow, notice the lowered chromaticisms— $\flat\hat{6}$ is most common but $\flat\hat{3}$ and $\flat\hat{7}$ also occur in borrowed chords.

The image displays a musical score for the song "Blackbird" by Lennon-McCartney (1968). The score is written for voice and piano. The key signature is E major (three sharps: F#, C#, G#). The time signature is 4/4. The score is divided into two systems. The first system contains the first four measures, and the second system contains the next four measures. The lyrics are: "All your life you were on-ly wait-ing for your mo-ment to ar-rive." The piano accompaniment features a prominent bass line. The score includes chord symbols above the staff and Roman numeral analysis below the staff. The first system shows a progression from E major to D#7, D, and Dm (minor), indicating a shift to the parallel minor mode. The second system continues with A/C#, B7, E7sus4, and A. The Roman numeral analysis below the staff is: A: V vii°7/V IV iv | I⁶ V⁷/V V⁷sus⁴ I.

YT: 4J5FPNtDc8

Figure 19.1.1 Lennon-McCartney, “Blackbird” (1968)

Notice the emotional effect of switching to the minor mode.

A famous example that progresses from the major I chord immediately to the minor i chord is Richard Strauss’s *Also Sprach Zarathustra*.

Figure 19.1.2 shows a musical score for a piano piece. The score is in C major and features a piano (p) and forte (f) dynamic. The key signature is C major, and the time signature is common time (C). The score includes a YouTube video player and a QR code. The video player has the text "YT: IFPwm0e_K98" below it.

Figure 19.1.2 Richard Strauss, *Also Sprach Zarathustra*, Op.30 (1896)

Later during the opening of *Also Sprach Zarathustra*, another borrowed chord occurs.

Figure 19.1.3 shows a musical score for a piano piece. The score is in C major and features a forte (f) dynamic. The key signature is C major, and the time signature is common time (C). The score includes a YouTube video player and a QR code. The video player has the text "YT: IFPwm0e_K98" below it.

Figure 19.1.3 Richard Strauss, *Also Sprach Zarathustra*, Op.30 (1896)

The next three examples have the pattern $\hat{1} \rightarrow \hat{7} - \hat{6} \rightarrow \hat{6}$ in the bass line.

Ev-'ry day — is so won - der - ful Then sud - den - ly

It's hard to breathe —

Chords: $E\flat$, $E\flat^7/D\flat$, Cm , $F\flat^7/C\flat$, vi , $ii^{\flat 4}_3$

This same bass line can be found (in the same harmonic rhythm) in “Part of Your World.”

YT: SXKLJu007eM

Figure 19.1.6 Howard Ashman and Alan Menken, *The Little Mermaid*, “Part of Your World” (1989)

In the next example by Radiohead, the iv chord (borrowed from minor) is preceded by the major IV chord.

Figure 19.1.7 displays a musical score for the song "Creep" by Radiohead. The score is written in G major (one sharp) and 4/4 time. The key signature is G major. The chords are G, B, C, and Cm. The Roman numerals are G: I, V/vi, IV, and iv. The notation shows the chords in both treble and bass staves, with the bass line providing a harmonic foundation.

YT: XFkzRNyygfk

Figure 19.1.7 Thom Yorke, Jonny Greenwood, Colin Greenwood, Ed O'Brien, Philip Selway, Albert Hammond, and Mike Hazlewood, "Creep" (1992)

Mode mixture is also found in the music of the band Nirvana.

Figure 19.1.8 displays a musical score for the song "Lithium" by Nirvana. The score is written in D major (two sharps) and 4/4 time. The key signature is D major. The chords are D5, F#5, B5, G5, Bb5, C5, A5, and C5. The Roman numerals are D: I, iii, vi, IV, bVI, bVII, V, and bVII. The notation shows the chords in both treble and bass staves, with the bass line providing a harmonic foundation.

YT: pkcJEvMcnEg

Figure 19.1.8 Kurt Cobain, "Lithium" (1992)

In the example above for "Lithium," the Roman numerals are analyzed as triads instead of "5" chords because the third of the chord is either implied or occurs in the voice part (not shown).

In the next example from the third movement Brahms's Third Symphony, the I chord alternates twice with a borrowed chord. The movement began in C minor, so there are three flats in the key signature, but this section is in C major.

The image displays two systems of musical notation for piano accompaniment. Each system consists of a grand staff with a treble and bass clef. The first system shows measures 1 through 3. Measure 1 is marked with a piano (*pp*) and dolce (*dolce*) dynamic. Measure 2 is marked with a 'ped. pt.' instruction. The second system shows measures 4 through 7. Measure 4 is marked with a 'ped. pt.' instruction. The piano part features a melodic line in the right hand and a harmonic line in the left hand, with various chordal textures and pedaling instructions.

YT: UH324lgbxaI

Figure 19.1.9 Brahms, *Symphony No. 3 in F major*, Op. 90, III. Poco Allegretto (1883)

A similar alternation between the I chord and a borrowed chord ($\flat VII^7$) happens in “Inchworm,” from the movie *Hans Christian Andersen*. Notice the special quality of the borrowed $\flat 6$ in the upper melody.

The image displays a musical score for the song "Inchworm" from the 1952 film *Hans Christian Andersen*, composed by Frank Loesser. The score is presented in two systems, each with a vocal line (top) and a piano accompaniment (bottom). The key signature is B-flat major (two flats), and the time signature is 3/4.

Vocal Line:

- Lyrics: "Two and two are four, four and four are eight, Inch-worm, Inch-worm, meas-ur-ing — the mar-i - golds,"
- Notes: The vocal line features a mix of B-flat major and D-flat major (B-flat minor) modes. The first two measures are in B-flat major. The third measure, "are four," is in D-flat major, indicated by a circled 6 (F-flat) above the staff. The fourth measure, "four and four," is in B-flat major. The fifth measure, "are eight," is in D-flat major, indicated by a circled 6 (F-flat) above the staff. The piano line also features triplets in the third and fifth measures.

Piano Accompaniment:

- Chords: The piano accompaniment uses chords that correspond to the mode mixture. The first measure is in B-flat major (Eb: I). The second measure, "Inch-worm," is in D-flat major (Db7). The third measure, "Inch-worm," is in B-flat major (Eb). The fourth measure, "meas-ur-ing — the mar-i - golds," is in D-flat major (Db7).
- Chord Analysis: Below the piano part, the chords are labeled: Eb: I, Db7, Eb, and Db7.

YT: 6dd6e14ov2c

Figure 19.1.10 Frank Loesser, *Hans Christian Andersen*, “Inchworm” (1952)

A famous example of mode mixture occurs in the “Waltz of the Flowers” from Tchaikovsky’s *Nutcracker*.

The image displays two systems of musical notation for Tchaikovsky's "Waltz of the Flowers" in 3/4 time, key of D major. The first system begins with a piano (*p*) dynamic and the instruction *dolce cantando*. It features a D major triad (D: I) in the bass. The melody in the treble clef is a half note D, followed by a half note E, and then a half note F#. The second system shows a modulation to C# minor (C#°7/D (ped.)) for a half note, indicated by a box. The bass line changes to a C# minor triad (vii°7) with a half note D. The melody continues with a half note G, a half note A, and a half note B. The third system returns to D major (D: I) with a half note D, a half note E, and a half note F#. The bass line returns to a D major triad (I) with a half note D, a half note E, and a half note F#. The dynamic changes to mezzo-piano (*mp*) and then forte (*f*).

YT: Kw0wLLVEMaA

Figure 19.1.11 Tchaikovsky, *Nutcracker*, “Waltz of the Flowers” (1892)

A similar melody occurs in “One Day I’ll Fly Away,” which, though it has a different harmonization, still uses mode mixture.

The image displays a musical score for the song "One Day I'll Fly Away" in 3/4 time, key of D major. The melody in the treble clef is a half note D, followed by a half note E, and then a half note F#. The bass line in the first system is a D major triad (D: I) with a half note D, a half note E, and a half note F#. The second system shows a modulation to G minor (Gm) for a half note, indicated by a box. The bass line changes to a G minor triad (iv) with a half note D, a half note E, and a half note F#. The melody continues with a half note G, a half note A, and a half note B. The third system returns to D major (D: I) with a half note D, a half note E, and a half note F#. The bass line returns to a D major triad (I) with a half note D, a half note E, and a half note F#.

YT: I8eNaVEEtC8

Figure 19.1.12 Joe Sample and Will Jennings, “One Day I’ll Fly Away” (1980)

19.2 Harmonization of Borrowed Scale Degrees

Let us examine the ways $\flat\hat{6}$ can be harmonized as root, 3rd, 5th, and 7th of a borrowed chord.

C: $\flat\text{VI}$ iv ii° $\text{ii}^\circ 7$ $\text{vii}^\circ 7$ $\flat\text{VII}^7$
 $\flat\hat{6}$ as: Root 3rd 5th 5th 7th 7th

Figure 19.2.1 Harmonization of $\flat\hat{6}$

Here are the ways $\flat\hat{3}$ and $\flat\hat{7}$ can each be harmonized as root, 3rd, and 5th of a borrowed chord (notice some of these chords are duplicates from the previous example).

C: $\flat\text{III}$ i $\flat\text{VI}$ $\flat\text{VII}$ v $\flat\text{III}$
 $\flat\hat{3}$ as: Root 3rd 5th $\flat\hat{7}$ as: Root 3rd 5th

Figure 19.2.2 Harmonization of $\flat\hat{3}$ and $\flat\hat{7}$

It is not necessary to memorize the chords in this section so much as to realize that the quality of diatonic chords will be altered when a scale degree from the minor mode is included in the chord.

19.3 Analyzing and Writing Borrowed Chords

Unlike secondary chords, you merely note the root, quality, and inversion of a borrowed chord in your Roman numeral analysis.

So, for the following chord:

G: ? A is root when stacked in 3rds; A is $\hat{2}$ quality is $^\circ 7$ (m3-m3-M3) G: $\text{ii}^\circ \frac{6}{5}$ (bass note is 3rd of chord)

Notice that the root is A when you stack the notes in 3rds, and A is $\hat{2}$ in G major. The quality is half-diminished since the 3rds stack as m3–m3–M3, making this a $\text{ii}^\circ 7$ chord. Since C, the 3rd of the chord, is in the bass, the correct analysis is $\text{ii}^\circ \frac{6}{5}$.

To write a borrowed chord from a Roman numeral, be sure to *pay close attention to the quality of the Roman numeral*.

A: $\flat\text{VI}$

$\flat\text{VI}$ is built on $\flat\hat{6}$. Determine $\flat\hat{6}$ in A major, which is $\text{F}\sharp$, then stack 3rds in the configuration M3–m3. The resulting triad contains $\text{F}\sharp$ –A– $\text{C}\sharp$.

A: \flat VI

Be careful of flats before Roman numerals. Flats mean to lower a root a m2 *in the key signature*, *not* to literally put a flat in front of the root of a chord.

19.4 The Deceptive Cadence with \flat VI

The $V \rightarrow \flat$ VI deceptive cadence is a deceptive realization of a deceptive progression. This $V \rightarrow \flat$ VI cadence ties into the \flat VI \rightarrow VII–I progression to produce an “epic” (although somewhat clichéd) ending to the “Star Spangled Banner” as performed at the Super Bowl and Presidential Inaugurations by artists such as Whitney Houston, Beyoncé, and Lady Gaga, among others.

Chord symbols above the staff: $D^{\flat 7}$ $B^{\flat 7}/D$ A^{\flat}/E^{\flat} $E^{\flat 7}$ $F^{\flat 6}$ $G^{\flat}add9$ A^{\flat}

This same V→VI deceptive cadence with bVI progressing to bVII followed by I occurs in epic fashion at the end of the animated film *Beauty and the Beast* from 1991.

19.5 The Picardy 3rd

It is rare to borrow from the major mode during a passage in a minor key. The major tonic usually functions as V/iv if it's not the last chord of a piece, and raised $\hat{6}$ and $\hat{7}$ occur naturally as part of the melodic minor scale.

In minor, the one place to borrow from the major mode is at the end of a piece in minor, with the use of the major I chord instead of minor i.

d: V 7 vii°7 I

Picardy third

YT: fTwkVsECg9w

Figure 19.5.1 J.S. Bach, French Suite No. 1 in D Minor, BWV 812, Sarabande

While the Picardy 3rd (the major third above the tonic) was most commonly encountered in the Baroque era, it has been used from then until now, though with less frequency.

19.6 Practice Exercises

1. Analyze the following chords with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below.

D: Ab: G: B: Bb: c:

1 2 3 4 5 6

2. Given the Roman numeral, key, and key signature, notate the chord on the staff, and analyze with lead-sheet symbols.

A: iv f: V₃/V D: bVI F: ii°₅ e: vii°₂/iv Bb: bIII

3. Analyze the following excerpt with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below. Analyze notes that are non-chord tones by putting parentheses around them and specifying them by type.

Chapter 20

The Neapolitan Chord

20.1 The Neapolitan Chord

The label “**Neapolitan**” is used in classical music for the \flat II chord and is labeled as “N” instead of \flat II. For example, when the Neapolitan chord occurs in first inversion—its most common inversion—it is labeled as N^6 .

Being a chromatically altered ii chord, the Neapolitan has [pre-dominant harmonic function](#).

Notice the special character of the Neapolitan and how composers sometimes alter texture, register, and dynamics when the Neapolitan occurs, as in the first movement of Beethoven’s Symphony No. 7, Op. 92.

The image displays a musical score for the first movement of Beethoven's Symphony No. 7, Op. 92, I (1812). The score is in 6/8 time and features a key signature of two sharps (F# and C#). The music is written for piano (p) and includes dynamic markings such as *ff* (fortissimo), *pp* (pianissimo), and *cresc.* (crescendo). The score is divided into two systems. The first system shows a sequence of chords: A (I), A: I, and Bm7/D (ii₅⁶). The second system shows a sequence of chords: Bb/D (N⁶), E7 (V7), and A (I). The Neapolitan chord (N⁶) is highlighted with a box and labeled as Bb/D. The score also includes a YouTube icon and a QR code, with the text "YT: -4788Tmz9Zo" below them.

20.3 Practice Exercises

1. Analyze the following chords with lead-sheet symbols above and Roman numerals with figured bass inversion symbols below. Remember to use “N” instead of \flat II.

Figure 20.3.1 shows six chords in bass clef, each with a lead-sheet symbol above and a Roman numeral with figured bass inversion symbols below:

Lead-sheet symbol	Roman numeral with figured bass
c: \flat II	1
G: \flat II	2
B \flat : \flat II	3
c \sharp : \flat II	4
d: \flat II	5
b: \flat II	6

2. Given the Roman numeral, please write the notes of the chord and lead-sheet symbol. Include key signatures.

Figure 20.3.2 shows six empty staves for chord notation, each with a Roman numeral below:

Roman numeral
1. Eb: N ⁶
2. a: N
3. D: \flat III
4. c: vii ^{o7} /V
5. B \flat : ii ^{o4} ₂
6. G: N ⁶

Chapter 21

Augmented Sixth Chords

21.1 Augmented Sixth Chords

Augmented sixth chords are a special class of **pre-dominant** chords with notes that approach the dominant ($\hat{5}$) from a half-step below ($\hat{\sharp 4}$) and from a half-step above ($\flat\hat{6}$) simultaneously.

Figure 21.1.1

In minor, $\flat\hat{6}$ doesn't require a flat because $\hat{6}$ is lowered in the minor key signature.

21.2 Types of Augmented Sixth Chords

There are three general types of augmented sixth chords—the **Italian augmented sixth chord** (“It⁺⁶”), the **French augmented sixth chord** (“Fr⁺⁶”), and the **German augmented sixth chord** (“Ger⁺⁶”). These geographic labels have persisted throughout the years despite the fact that no reasoning has been found for these designations.¹

All types of augmented sixth chords contain scale degrees $\flat\hat{6}$ and $\hat{\sharp 4}$. To these two scale degrees, the It⁺⁶ adds $\hat{1}$. The three notes of the It⁺⁶ ($\flat\hat{6}$, $\hat{\sharp 4}$, and $\hat{1}$) form the foundation of the Fr⁺⁶ and Ger⁺⁶. The Fr⁺⁶ adds $\hat{2}$ to the Italian augmented sixth chord's $\flat\hat{6}$, $\hat{\sharp 4}$, and $\hat{1}$, and the Ger⁺⁶ adds $\flat\hat{3}$ to the Italian's $\flat\hat{6}$, $\hat{\sharp 4}$, and $\hat{1}$, as is shown in the example below.

¹The 1964 *Harvard Dictionary of Music* states these chords are “rather pointlessly...distinguished as ‘Italian,’ ‘German,’ and ‘French’ sixth...”

Figure 21.2.1 The Three Types of Augmented Sixth Chords in Major and Minor

The final chord on the first line—the Enharmonic German $^{+6}$ or EnGer^{+6} —respells the $\flat\hat{3}$ as a $\sharp\hat{2}$ because the EnGer^{+6} resolves only to major I_4^6 . The EnGer^{+6} does not occur in minor.

21.3 Analyzing Augmented Sixth Chords

Since our process for analyzing chords has been to stack them up in thirds to determine the root and quality, it is worth examining these four augmented sixth chords as stacks of thirds.

Figure 21.3.1 Augmented Sixth Chords Stacked in Thirds

Notice that all augmented sixth chords contain a $^{\circ}3$ when stacked in 3rds. None of the chords we have studied so far contain diminished thirds.

Principle 21.3.2 Augmented Sixth Chords. *When you encounter a chord with a diminished third, it is an augmented sixth chord.*

Once you determine the chord you are analyzing has a $^{\circ}3$, analyze the scale degrees to determine which type of augmented sixth chord it is.

21.4 Lead-Sheet Analysis of Augmented Sixth Chords

When using lead-sheet symbols for augmented sixth chords, we will treat them as major-minor seventh chords built on $\flat\hat{6}$, since that matches the sonic quality of the augmented sixth chords and is similar to how they occur and are spelled in jazz and popular music. The chords in parentheses are enharmonic respellings of the three augmented sixth chord types.

Figure 21.4.1 Augmented Sixth Chords Stacked in Thirds

In the example above, we see a disagreement between “Classical” analysis and lead-sheet analysis. The fundamental concept of lead-sheet analysis is to show root, quality, and inversion. The “Classical” spelling and the Classical analysis of augmented sixth chords show the direction of resolution (with the chromatically raised notes), which necessitate the need for original labels, since we don’t have a Roman numeral or a lead-sheet symbol that would communicate a chord containing a diminished third above the root (that is then inverted!).

Therefore, when you are asked to provide lead-sheet symbols for augmented sixth chords, analyze each one as if it is a dominant 7th chord with a misspelled 7th ($A^b-C-E^b-F^\sharp$ instead of $A^b-C-E^b-G^b$).

21.5 Examples with Augmented Sixth Chords

21.5.1 The Italian Augmented Sixth Chord

The first examples, from the first movement of Beethoven’s Fifth Symphony, shows an Italian augmented sixth chord (It^{+6}) in C minor with the “Classical” spelling.

Figure 21.5.6 Henry Mancini, “The Pink Panther Theme” (1963)

Fiona Apple’s “Criminal,” from 1996, features German augmented sixth

chords in the verse (F^7 in the key of A minor) as well as in the pre-chorus, seen in the example below.

The musical score for Fiona Apple's "Criminal" (1996) is shown in two systems. The first system features a vocal line and a piano accompaniment. The vocal line has lyrics: "I've come to you 'cause I need guidance to be true And I just". The piano accompaniment has chords labeled C, B \flat , A \flat^7 , and G. The second system continues the vocal line with lyrics: "don't know where I can be - gin Ooh". The piano accompaniment has chords labeled F 7 and A \flat . Roman numeral analysis is provided below the piano part: C: I, \flat VII, Ger $^{+6}$, V, IV 7 , and \flat VI.

YT: FF0zayDpWoI

A repeating progression of $Am-F^7-E$ ($i-Ger^{+6}-V$ in Roman numerals) occurs in “Friend Like Me” from the movie and musical *Aladdin*.

YT: 0HwdpترمQQ

Figure 21.5.8 Alan Menken and Howard Ashman, *Aladdin*, “Friend Like Me” (1992)

21.5.4 The Enharmonic German Sixth

In the following example an “Enharmonic German augmented sixth” chord occurs. While a $G^{\flat 7}$ chord would normally have the notes $G^{\flat}-B^{\flat}-D^{\flat}-F^{\flat}$, the F^{\flat} is respelled as an E_{\sharp} , creating the interval of an augmented sixth, while the fifth of the chord, D^{\flat} , is respelled as a C_{\sharp} , creating the interval of a doubly

augmented fourth. In fact, some music theory textbooks refer to the Enharmonic German augmented sixth chord as “the chord of the doubly-augmented fourth.” The spelling is this way because the $C\sharp$ will resolve upward to a $D\sharp$, the third of a major I_4^6 chord.

21.6 Descending Chromatic Bass Lines

A common musical pattern is the descending chromatic bass line ($\hat{1} - \hat{7} \rightarrow \hat{7} - \hat{6} \rightarrow \hat{6} - \hat{5}$). Composers harmonize descending chromatic bass lines with all manner of harmonies, including secondary chords, borrowed chords, augmented sixth chords, and rarely-used diatonic chords. Below are some examples from the past four centuries.

Chapter 22

Modulation

22.1 Modulation

At its simplest, **modulation** is a change of key that happens within a composition. In popular music, the change of key will often be called a “**key change**” instead of a “modulation.” Those who study classical music theory typically reserve the term “modulation” for the slower and more subtle change of key that occurs in many classical pieces, although there are similarities between “key change” in popular music and the classical music term “direct modulation”, which we will study later in this chapter.

Here are examples of key changes in popular music.

YT: 1DK9QqIzhwk

Figure 22.1.3 Jon Bon Jovi, Richie Sambora, and Desmond Child, “Livin’ on a Prayer” (1986)

22.2 Tonicization versus Modulation

Studying modulation will require us to distinguish between **tonicization**, which we studied recently, and modulation. Tonicization, involving secondary chords, can be as short as two chords (V/V to V , for example) but can sometimes encompass several measures as in the following example.

The image displays three systems of musical notation for Schubert's "Abschied" (D. 957). Each system consists of a vocal line (treble clef), a piano accompaniment (grand staff), and a harmonic analysis line below. The key signature is E-flat major (three flats). The lyrics are in German.

System 1:

Vocal: trau - rig ge-seh'n, so kann es auch jetzt nicht beim Ab - schied ge-scheh'n, so

Piano: Accompaniment with chords and moving lines in both hands.

Harmony: Eb: I vi V⁷/vi vi

System 2:

Vocal: kann es auch jetzt nicht beim Ab - schied ge-scheh'n, A - de! du

YT: tVJy904MiIY

Figure 22.2.5 J.S. Bach, *Christmas Oratorio*, BWV 248, “Ermuntre dich, mein schwacher Geist,” (Chorale) (1734)

To determine pivot chords and the new key, listen to the music to hear the cadence in the new key, then work backward from the cadence to see if the dominant in the new key was approached by pre-dominant chords (ii or IV) in the new key. Then, analyze from the beginning of the phrase until you reach the new key. Finally, look for a logical pivot point. Sometimes two successive chords could logically be pivot chords. If so, include two chords on either side of your pivot bracket.

A: I V⁶ IV⁶ I⁴ V⁷ I IV I I V⁶ I |
 | E: I⁶ IV I⁴ V⁷ I

YT: Qy8NLd7d6VE

Figure 22.2.6 Robert Schumann, *Album for the Young*, Op. 68, No. 17, “Little Morning Wanderer” (1848)

Before we start analyzing and writing modulations, we will examine key relationships and pivot chords.

22.3 Key Relationships

In the Baroque and Classical eras, composers typically modulated to the dominant (when starting in a major key) or to the relative major (when starting in a minor key). In the Romantic era, composers experimented with modulating to more remote (or perhaps adventurous) key areas, described as “foreign” to the home key.

“**Closely related**” keys have key signatures one degree “sharper” or “flatter” than the starting key. For any major or minor key, there are five closely related keys, including the relative major or minor of the home key.

Figure 22.3.1 Closely Related Keys with A Major as Home Key

Key signatures that are not closely related are said to be “**foreign**” or “**distantly related**.” We will see that some types of modulations from the Romantic era, like common-tone modulations, exploit foreign key relationships to dramatic effect.

22.4 Modulations with Diatonic Pivot Chords

Modulations with pivot chords will be analyzed using a pivot bracket, as we’ve seen earlier in the chapter.

In a **diatonic common chord modulation**, the pivot chords will be diatonic in both keys.

G: I vi IV⁶ V⁷ I

D: IV V₂⁴ I⁶ V V⁷ I

both I and IV are diatonic

YT: tVJy904MiIY

Figure 22.4.1 J.S. Bach, *Christmas Oratorio*, BWV 248, “Ermuntre dich, mein schwacher Geist,” (Chorale) (1734)

22.4.1 Determining Common Chords Between Keys

In order to compose a diatonic common chord modulation, you need to determine which chords are diatonic—having the same root *and quality*—in both keys.

Figure 22.4.2 Diatonic Common Chords in G major and D major

We can repeat this process with Roman numerals, aligning the roots of the chords in the two keys.

R. N.:	I	ii	iii	IV	V	vi	vii ^o
G major:	G	Am	Bm	C	D	Em	F ^{#o}
D major:	G	A	Bm	C ^{#o}	D	Em	F ^{#m}
R. N.:	IV	V	vi	vii ^o	I	ii	iii

Figure 22.4.3 Roman Numerals for Diatonic Common Chords in G major and D major

If you are a composer wanting to write a diatonic common chord modulation, you need to determine the best place within a progression to pivot to the

new key. To do this, you need to consider the harmonic function of the pivot chords.

22.4.2 Harmonic Functions of Diatonic Pivot Chords

In terms of [harmonic function](#), composers typically do not use a pivot chord that has [dominant function](#) in the new key because such a modulation might sound abrupt and unconvincing. Instead, the pivot chord in the first key often has tonic or [tonic prolongation function](#).

In the following example, the pivot chord simultaneously has tonic function in the first key and pre-dominant function in the second key. This creates a more seamless and less jarring progression to the second key.

Harmonic function in G:

Ton.

G: I vi IV⁶ V⁷ I

D: IV V₂⁴ I⁶ V V⁷ I

Harmonic function in D:

Pre-Dom.

YT: tVJy904MiIY

Figure 22.4.4 J.S. Bach, *Christmas Oratorio*, BWV 248, “Ermuntre dich, mein schwacher Geist,” (Chorale) (1734)

The pivot chord in the first key, G, has tonic harmonic function, while in the second key, D major, the G chord has pre-dominant function.

Observe the harmonic function of the pivot chords in the following examples from Bach chorales.

22.5 How to Recognize a Key After a Modulation

Look for the following cues when examining music containing modulations:

1. Look for recurring accidentals, then add them to the key signature to determine the new key
 - (a) Lowered notes (like flats) usually create $\hat{4}$ (as do the flats in key signatures)
 - (b) Raised notes (like sharps) often create $\hat{7}$, the leading tone

- i. If there are multiple raised notes, look for the “sharpest of sharps” (in key signature order) to determine which sharp is acting as $\hat{7}$
2. If accidentals are canceled out, they indicate tonicizations or chromatic non-chord tones

E_b is lowered note acting as $\hat{4}$
 E_b cancels out E_b , which means E_b represented a tonicization
 B^b occurs 3 times and isn't canceled out, representing a modulation
 B^b is a raised note acting as $\hat{7}$
 multiple secondary chords destabilize F major
 cadential formula affirms new key

YT: 9WQbN91tpWI

Figure 22.5.1 J.S. Bach, English Suite No. 4 in F Major, BWV 809, Sarabande (ca. 1715)

22.6 Modulations with Chromatic Pivot Chords

You will sometimes encounter examples where the pivot chord is a chromatic chord in at least one (and sometimes both) of the keys involved in the modulation.

22.6.1 Secondary Common Chord

Below is an example where the pivot chord is a secondary chord in both keys.

The image displays three systems of musical notation for the piano accompaniment of Schubert's "Abschied" (D. 957). Each system consists of a grand staff with a treble and bass clef. The first system is in E-flat major, with a key signature of three flats. The second system continues in E-flat major. The third system shows a modulation to A-flat major, indicated by a key signature change to two flats. Chord labels are provided below the piano part of each system.

System 1: E \flat : I ii⁶

System 2: E \flat : V I V⁷/ii | A \flat : V⁷/vi

System 3: A \flat : IV I⁶₄ V⁷ I⁶₄ V I A - de!

YT: Wod-JellQ88

Figure 22.6.1 Schubert, *Schwanengesang*, D. 957, "Abschied" (1828)

22.6.2 Borrowed Common Chord

In modulation by **borrowed common chord** (or mode mixture), the pivot chord will be a borrowed chord in one of the keys involved in the modulation.

In the following example, a borrowed chord, i⁶ in D \flat minor, rewritten as a C \sharp minor chord, is reinterpreted as vi⁶ in the second key, E major.

The musical score is in 3/4 time and features a piano accompaniment with a melodic line in the right hand. The modulation is achieved through a series of chords: D♭: I, V₃⁴, D♭: V₂⁴, I⁶, E: V⁶, V₅⁶, and I. The score includes dynamic markings like *dolce*, *cresc.*, *dim.*, *pp*, and *p*.

YT: H3S8slvoHoU

Figure 22.6.2 Beethoven, Piano Sonata No. 31 in A♭ major, Op.110, I, (1821)

22.6.3 Neapolitan Common Chord

A particularly adventurous and imaginative pivot is the Neapolitan, which can bridge the gap between two foreign (or distantly related) keys.

fol-gen auf luf - ti - ger Bahn. Wo - hin? — wo - hin?

d: i ii^{o6} i₄⁶ V i N₅⁶ | ab: V₅⁶ i V

YT: IvjZiYVZUIY

Figure 22.6.3 Schubert, *Schwanengesang*, D. 957, “Frühlingssehnsucht” (1828)

In the example above, Schubert bridges the tonal distance between D minor and A♭ minor with N₅⁶ (note the dominant-seventh quality of the Neapolitan in this instance), which acts as a V₅⁶ in A♭ minor, a tritone away from D minor.

22.6.4 Augmented Sixth Common Chord

In the next chapter, we will examine how Augmented Sixth chords are enharmonically reinterpreted in a process known as enharmonic modulation.

22.7 Modulations Without Pivot Chords

This section contains the following subsections below:

- [Direct Modulation](#)
- [Common-Tone Modulation](#)
- [Sequential Modulation](#)

22.7.1 Direct Modulation

Direct modulation (also known as phrase modulation) is a type of modulation where a composer decides to move suddenly to a new key without using pivot chords or preparing the new tonic with its dominant.

brin - ge die Grü - sse des Fer - nen ihr zu.

e: i vii°7/i ped i

All' ih - re Blu - men im Gar - ten gep-flegt,

YT: uTWQRjGkprQ

Figure 22.7.1 Schubert, *Schwanengesang*, D. 957, “Liebesbotschaft” (1828)

In the example below from the second song of the same song cycle as the example above, Schubert does not attempt to change gradually from C minor to A \flat major, but instead stops on a half cadence in C minor and begins on the tonic in A \flat major in the next bar.

Etwas schneller.

Wie hab' ich oft so

Ab: I

c: i_4^6 V i V

YT: mLTYrvgKDUo

Figure 22.7.2 Schubert, *Schwanengesang*, D. 957, “Kriegers Ahnung” (1828)

Direct modulation is the most common type of “modulation” found in popular music. At the beginning of this chapter we defined this type of modulation in popular music as “key change.”

Chord symbols above the piano part: $C^\sharp m$, $Bsus^4$, $Aadd^9$ $C^\sharp m/G^\sharp$, Fm

Roman numerals below the piano part: $E: vi$, $Vsus^4$, $IVadd^9$ vi_4^6 , $A\flat: vi$

YT: AjnJDBHmN18

Figure 22.7.3 James Horner and Will Jennings, “My Heart Will Go On” (1997)

With direct modulation, composers do not make any attempt to connect two different keys through any pivot chords or common tones. In the next section, we examine how composers connect two keys through a common tone.

22.7.2 Common-Tone Modulation

In **common-tone modulation**, two chords are connected through a single note to bridge the distance between two keys.

In the following example, the note C^\sharp acts as a hinge between a C^\sharp major chord (V in F^\sharp minor) and an A dominant seventh chord (V^7 in D major).

f#: V i V
 f#: i V ff
 p $\hat{5}$ in f# $\hat{7}$ in D
 p p cresc. sf p
 A: V⁷ I

YT: bEiYmeeV6sI

Figure 22.7.4 Beethoven, Symphony No. 2 in D major, Op. 36, I. (1801–1802)

In the next example, the note A acts as a hinge between an A major chord (V in D minor) and an F major chord (I in F major).

The musical score illustrates a chromatic mediant modulation. The first system shows the piano part in D major (d: V), with a dynamic marking of *p* and a *dim.* (diminuendo) marking. The second system shows the piano part in F major (F: I), with a dynamic marking of *pp* (pianissimo). The modulation is indicated by a bracket labeled "d: V" and "F: I".

YT: qSRRb0vpaXg

Figure 22.7.5 Schubert, Piano Trio No. 1 in B-flat major, D. 898, I. (1828)

22.7.2.1 Chromatic Mediants

In a common-tone modulation, the two chords connecting the two keys are typically in a chromatic mediant relationship. **Chromatic mediant** are chords with roots a third apart that share only one common tone and have the same quality (both are major or both are minor).

The diagram shows two chords: D major (D, F#, A) and F major (F, A, C). The common tone is A. The roots D and F are a third apart. The diagram is labeled with E, C#, A for the first chord and C, A, F for the second chord. Below the diagram, the following points are listed:

- one common tone—A
- roots are a 3rd apart
- both chords are major

Figure 22.7.6 Chromatic mediant relationship in Figure 22.7.5

Any major or minor triad will have four chromatic mediants, as shown in the example below.

- root of second chord is a third lower or higher than starting chord
- second chord is same quality as starting chord
- the two chords within each bar share only one common tone

Figure 22.7.7 Chromatic mediants of the C major and C minor triads

Below are examples chromatic mediants that do not involve modulation. In fact, the progression in the following three examples are found in the last bar of [Figure 22.7.7](#), the progression from i to $\flat vi$ (shown as Cm to $\flat vi$ in the example above).

Figure 22.7.10 John Williams, *The Phantom Menace*, “Duel of the Fates” (1999)

22.7.3 Sequential Modulation

Modulation can also be accomplished by sequence. In a **sequential modulation**, a melody and its accompanying harmonies are repeated at a new pitch level to establish or lead to a new key. In the following example, the sequence of the original idea occurs in the new key.

same melodic pattern in A \flat

same Roman numeral pattern in A \flat

YT: M9SzCHQCNGY

Figure 22.7.11 Beethoven, Piano Sonata Op. 2, No. 1, III. (1795)

In the following example, an idea in C major is repeated up a step in D major, then up another step in E minor before reaching an F \sharp° chord, a chord with dominant function in G major.

The musical score consists of three systems, each with three staves: Oboe, Violin I, and Violin II. The key signature is one sharp (F#), and the time signature is 2/4.

System 1:

- Oboe:** A continuous melodic line. An annotation "same melodic pattern in D major" with a bracket spans the first two measures.
- Violin I:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.
- Violin II:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.
- An annotation "establishes F#, destabilizes C major" with a bracket spans the last two measures of the Violin I and II parts.

System 2:

- Oboe:** Continues the melodic pattern. An annotation "same melodic pattern in E minor" with a bracket spans the first two measures.
- Violin I:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.
- Violin II:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.
- Below the staves, an annotation "E minor, affirms F# and movement away from C major" is present.
- Below the staves, an annotation "G: vii° V7" is present.
- Below the staves, an annotation "dominant function in G major" is present.

System 3:

- Oboe:** Continues the melodic pattern. An annotation "arrival on G as tonic" is present.
- Violin I:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.
- Violin II:** A melodic line with a half note G4, followed by eighth notes A4, B4, and C5.

YT: jD9_dShQbN8

Figure 22.7.12 Mozart, Oboe Concerto in C major, K. 314, III. (1777)

In the next example, after a cadence in G minor, an idea in F minor is repeated down a whole step in E♭ minor to achieve the change of key to E♭ major, which is the starting key of this aria, as can be seen in the key signature.

The musical score illustrates a modulation from G major to F major. The vocal line (soprano) has the lyrics: "cor mi va, pal - - - - pi -". The piano accompaniment features a sequence of chords: G major (i⁶₄), V, F major (i), and F major (ii⁰). The piano part includes a melodic line in the right hand and a bass line in the left hand. A bracket above the piano part indicates a "same pattern down a whole step" from the G major section to the F major section. The F major section includes the lyrics "tan - - - - do!". The piano part continues with chords: F major (i), E-flat major (ii⁰), V⁷, and V⁶₅.

YT: VEmnmVXEqqM

Figure 22.7.13 Mozart, *Don Giovanni*, K. 527, “Mi tradi quell’alma ingrata” (1787)

While this is by no means an exhaustive list of modulatory techniques, it should give you a sense of some of the different means composers use to change keys.

22.8 Practice Exercises

Day One

- For each given key, list the five closely-related keys.
 - d: _____
 - D \flat : _____
 - f: _____

2. For each progression, analyze the Roman numerals with lead-sheet symbols and specify the second key.

Lead-sheet symbols: _____

Roman numerals: F: I V₂⁴ I⁶ vi
 _____ : ii I⁶ ii⁶ I₄⁶ V⁷ I

Lead-sheet symbols: _____

Roman numerals: g: i V⁶/iv iv iv⁶
 _____ : ii⁶ vii^{o7}/V I₄⁶ V⁷ I

Day Two

3. Borrowed Chord Modulation. List the closely related keys to the starting major key, then specify the parallel minor key and its closely related keys.

4. For each progression, analyze the Roman numerals with lead-sheet symbols and specify the second key.

Lead-sheet symbols: _____

Roman numerals: A: I bIII I V₂⁴/IV
 _____ : V₂⁴ i⁶ Ger⁺6 i₄⁶ V⁷ VI

Lead-sheet symbols: _____

Roman numerals: g: i i⁶ N⁶
 _____ : I⁶ ii⁶ vii^{o7}/V I₄⁶ vii^{o7}/vi vi

Day Three

5. Determining Diatonic Common Chords. For each of the two keys in each example, list the diatonic chords as lead-sheet symbols and as Roman numerals then circle those diatonic to both keys

Roman numerals: d: _____

Lead-sheet symbols in Dm: _____

Lead-sheet symbols in F: _____

Roman numerals: F: _____

6. Referring to the [Harmonic Flowchart](#), fill in lead-sheet symbols, Roman numerals, and [Harmonic Functions](#) for the following example—be sure to put some of the chords in first inversion for variety; create a

melody by adding embellishments (**non-chord tones**) and try to create repeating **motives** and/or **subphrases**; LSS stands for lead-sheet symbols, RN stands for Roman numerals, and HF stands for Harmonic Function

LSS: _____

RN: e: _____ N⁶ _____ i _____
 b: _____ Fr⁺⁶ _____

HF: Ton Dom Ton _____ /V Dom _____ Dom Ton _____ Cad₄ Dom Ton

Day Four

7. List the four chromatic mediants for each chord.

(a) Fm: _____

(b) D \flat : _____

(c) G: _____

(d) G \sharp m: _____

Day Five

8. Analyze lead-sheet symbols, motives (with numbers, noting melodic alteration when it occurs), non-chord tones, Roman numerals, and harmonic function.

by G.K.B.

LSS: _____

Motives: _____

RN: _____

HF: _____

LSS: _____

Motives: _____

RN: _____

HF: _____

Compose an eight-measure example using the motivic structure and harmonic function in the example above. Create a new melody with new motives but the same sequence of motives. You may use a different time signature, mode, and accompanimental texture.

LSS: — — — —

Motives: — — — — —

Chapter 23

Enharmonic Modulation

23.1 Enharmonic Modulation

In an **enharmonic modulation**, the pivot chord is almost always misspelled in one of the keys and therefore must be reconceptualized enharmonically by the analyst. In this regard, an enharmonic modulation is a harmonic pun.

Here is a pun from Shakespeare’s *Richard III*, Act 1, Scene 1:

Now is the winter of our discontent
Made glorious summer by this sun of York

The “sun” of York is the *son* of York, King Edward IV.

Here is a simple enharmonic modulation:

C: I ii⁶ V⁷ b: i⁶₄ V⁷ i

Figure 23.1.1 Enharmonic Modulation from C major to B minor

Like a verbal pun, this harmonic pun is effective because the third chord (G^7) has two “meanings”—in the context of C major, G^7 is V^7 and the root wants to cadence down a fifth to C, but the G^7 is a Ger^{+6} in the context of B minor, where the root of the G^7 wants to progress down a half step to a chord of dominant function, i_4^6 in the example above.

**Figure 23.1.2**

Notice that the G^7 can only be spelled correctly in one of the keys—either as a dominant seventh chord on G (G–B–D–F) or as a Ger^{+6} on G (G–B–D–E \sharp), hence the term “enharmonic modulation.” The analyst must envision the other spelling (the one not shown) to understand the double context, in the same way “sun of York” must be envisioned as “son of York.”

We will encounter two sonorities used in enharmonic modulations: the dominant seventh sonority and the diminished seventh sonority.

23.2 The V^7 and Ger^{+6} as Pivot Chords

In this first type of enharmonic modulation, the pivot to the new key will consist of the V^7 being enharmonically reinterpreted as a Ger^{+6} , or the Ger^{+6} being enharmonically reinterpreted as V^7 . Secondary dominants, like V^7/IV , V^7/V , etc., will also be reinterpreted harmonically as Ger^{+6} chords (and vice versa) in enharmonic modulations.

As we saw in the previous section, the dominant seventh chord and the Ger^{+6} chord have the same sound but are spelled differently. This involves a fairly straightforward enharmonic respelling. Most commonly, the top note of the chord is enharmonically respelled to envision the enharmonic alternative.

**Figure 23.2.1**

Each chord above implies a key based on its spelling: the dominant seventh chord occurs diatonically only on the $\hat{5}$ scale degree in major, while the Ger^{+6} chord most commonly occurs with the lowest note on the lowered $\hat{6}$ scale degree.

Less commonly, the bottom three notes could be respelled and the uppermost note could be retained as a common tone.

**Figure 23.2.2**

Remember, you will not see this respelling in the music you are analyzing. You must be able to visualize the enharmonic respelling in order to analyze the enharmonic modulation correctly.

The examples below illustrate some of the ways this enharmonic modulation occurs in pieces from the literature

In the first example from Tchaikovsky's *Nutcracker* ballet, a D^7 is spelled on the staff as $D-F\sharp-A-B\sharp$ so that it sounds like a V^7/IV in D major but is spelled and resolves as a Ger^{+6} in the key of $F\sharp$ minor.

D C[#]o7/D ped. D D⁷

D: I vii°7/I ped. I V⁷/IV (D-F[#]-A-C)

f#: Ger⁺6 (D-F[#]-A-B[#])

Figure 23.2.4 Beethoven, Symphony No. 5, Op. 67, II (1808)

In the following example from *Les Miserables*, a Ger⁺6 in E minor is spelled as a V⁷ chord in F major and resolves to the I chord F major.

The musical score is for the song "On My Own" from the musical *Les Misérables*. It is written in 2/4 time and features a key change from E-flat major to B major. The score is divided into two systems. The first system contains the first two measures of the melody and piano accompaniment. The second system contains the next three measures. Chord symbols are placed above the melody line: E \flat , Em, B, Am⁷, C⁷, and F. The lyrics are: "And al - though I know that he is blind Still I say there's a way for us I love him". Below the piano part, Roman numerals are provided: e: i, V, e: iv⁷, F: V⁷, and I. A YouTube icon and a QR code are located below the Roman numerals, with the text "YT: VjfmP7h3gBw" underneath.

Figure 23.2.5 Music by Claude-Michel Schönberg, lyrics by Alain Boublil, Herbert Kretzmer, John Caird, Trevor Nunn, and Jean-Marc Natel, *Les Misérables*, “On My Own” (1980)

In the next section we will examine how the fully diminished seventh chord can be enharmonically reinterpreted.

23.3 The Fully Diminished Seventh as Pivot Chord

Each diminished seventh sonority implies *four* different keys. Play and sing through the example below.

enharmonically respelled

a: $\text{vii}^{\circ 7}$ i c: $\text{vii}^{\circ 4}_2$ i

enharmonically respelled

enharmonically respelled

eb: $\text{vii}^{\circ 4}_3$ i Gb: $\text{vii}^{\circ 6}_5$ I

Figure 23.3.1 The Four Resolutions of a Diminished Seventh Sonority

In the example above, each note of the $\text{vii}^{\circ 7}$ chord was treated in turn as the $\hat{7}$ scale degree and resolved up by half step. In the example below, each note of the chord is resolved as if it were the 7th of the chord, moving down by half step to the root of a dominant seventh chord.

enharmonically respelled

a: $\text{vii}^{\circ 7}$ V^6_5 c: $\text{vii}^{\circ 4}_2$ V^7

enharmonically respelled

enharmonically respelled

eb: $\text{vii}^{\circ 4}_3$ V^4_2 Gb: $\text{vii}^{\circ 6}_5$ V^4_3

Figure 23.3.2 Resolutions of a Diminished Seventh Sonority to a Dominant Seventh Sonority

This means that for any diminished seventh chord, you should be able to imagine the other three respellings in the same way you can imagine other spellings of words like *two* (i.e., *to* and *too*) or *there* (*their* and *they're*).

In the following examples, a $\text{vii}^{\circ 7}$ chord is enharmonically reinterpreted in a new key.

In the first example, Beethoven enharmonically reinterprets $\text{F}^{\sharp \circ 7}/\text{C}$ in G minor ($\text{vii}^{\circ 4}_3$) as $\text{vii}^{\circ 4}_2$ in E minor ($\text{D}^{\sharp \circ 7}/\text{C}$), which resolves to a V^7 chord in E minor.

Gm $Gm/B\flat$ D/A Gm $C^{\sharp o7}$ D $F^{\sharp o7}/E\flat$ D $F^{\sharp o7}/C$ $Gm/B\flat$

$g: i$ i^6 V_4^6 i vii^{o7}/V V vii_2^{o4} V vii_3^{o4} i^6

$g: vii_2^{o4}$ V vii_3^{o4} $e: vii_2^{o4}$ V^7 i_4^6 V^7 i_4^6 $V^{7(b9)}$ V^7

YT: mLxF5I1MfbM

Figure 23.3.3 Beethoven, Pathétique Sonata, Op. 13, I (1798)

In the next example from the second movement of Beethoven's Fifth Symphony, Beethoven modulates from C major to $A\flat$ major by enharmonically reinterpreting an $E^{\circ 7}$ chord in C ($vii^{\circ 7}/IV$) as vii_2^{o4} in $A\flat$ ($G^{\circ 7}/F^{\flat}$). Notice the unusual resolution of the vii_2^{o4} chord to a Ger^{+6} chord by leading all three of the upper voices of the vii_2^{o4} up by half step to the Ger^{+6} , which itself is unusually spelled in the key of $A\flat$ major ($E-A\flat-C\flat-D$ instead of $F\flat-A\flat-C\flat-D$).

YT: DdL2e4pE-uA

Figure 23.3.4 Beethoven, Symphony No. 5, Op. 67, II (1808)

In the final example of this section, Schubert reinterprets a $G^{\sharp 0}_7$ in G minor as an $E^{\sharp 0}_7$ chord in B minor (vii^0_5/V). The $G^{\sharp 0}_7$ chord in G minor is analyzed as vii^0_2/iv , meaning it could resolve to a C minor chord, but it could also have been interpreted as vii^0_3/VI , or as tonicizing an E \flat major chord. Because the chord never resolves in G minor, one cannot be certain of the intended resolution. Remember that diminished triads are not tonicized, so the $G^{\sharp 0}_7$ would not be considered as tonicizing the note A (the root of the ii^0 chord) or F \sharp (the root of the vii^0 chord).

23.4 Practice Exercises

Day One

1. Notate the specified chord, resolve it, then notate and resolve the enharmonic respelling(s).

g: Ger^{+6} $\xrightarrow{\text{resolve}}$ _____

respell

_____ : _____ $\xrightarrow{\text{resolve}}$ _____

2. For the following Roman numeral progressions, label the chords with lead-sheet symbols, specify the new key, and notate all of the chords in the appropriate inversion on the staff below. The enharmonic pivot chord can be spelled correctly in only one of the two keys.

Lead-sheet symbols: _____

Roman numerals: Eb: I \flat VI IV V^7/V |
 _____ : Ger^{+6} i_4^6 V_2^4 $\text{vii}^{o7}/\text{iv}$ iv V

3. Analyze with lead-sheet symbols and Roman numerals and label the enharmonic pivot chords in the examples below.

g: _____

Day Two

4. Notate the specified chord, resolve it, then notate and resolve the enharmonic respelling(s).

The diagram shows four staves, each with a treble clef and a key signature of two flats (Bb and Eb). The first staff has a single note on the second line (F4) labeled $E_b: vii^{\circ 7}$. Below it, an arrow labeled 'respell' points to a second staff where the note is respelled as E4 (first line). From there, an arrow labeled 'resolve' points to a third staff where the note is respelled as D4 (first space). This pattern continues for the fourth staff, where the note is respelled as C4 (first line) and then resolved to B3 (first space). The final staff shows the resolution of B3 to A3 (first space).

5. Analyze with lead-sheet symbols and Roman numerals and label the enharmonic pivot chords in the examples below.

The musical score is in 3/4 time with a key signature of two flats (Bb and Eb). The treble staff contains four chords: Bb major (first measure), Eb major (second measure), Ab major (third measure), and Gb major (fourth measure). The bass staff contains the following notes: Bb (first measure), Ab (second measure), Gb (third measure), and Fb (fourth measure). Below the bass staff, the text 'd:' is followed by a series of blank lines for analysis.

Chapter 24

Binary and Ternary Forms

24.1 Binary and Ternary Form

In this chapter we will compare the following:

Sectional versus Continuous
Binary versus Ternary
Rounded Binary versus Ternary

24.2 Sectional versus Continuous

We apply the descriptor “**sectional**” to a binary or ternary form when the first section (the A section) ends on the tonic. (Note: We use lowercase letters to refer to phrases and uppercase letters to refer to sections.)

Introduction
Zart bewegt

First Section
Phrase 1

Gu-ten A - bend, gut Nacht, mit

Phrase 2

Ro - sen be - dacht, mit Näg - lein be - steckt schlupf

Second Section
Phrase 3

I = “Sectional”

Phrase 4

YT: 6kh51bIA2q8

Figure 24.2.1 Brahms, *Fünf Lieder*, Op. 49, No. 4 “Wiegenlied” (1868)

The term “**continuous**” is used the first section of a binary or ternary form does *not* end on the tonic chord. While this often means the first section ends in a new key, it can also mean the first section ends on the dominant chord in a half cadence.

First Section

Phrase 1 *Phrase 2*

Andante *ten.* *ten.*

Phrase 3 *ten.* *ten.* *Phrase 4*

Second Section
Phrase 5 (contrasting material)

V
“not tonic” = “Continuous”

Phrase 6 *ten.*

YT: 4Ljwkamp3LI

Figure 24.2.2 Haydn, Symphony No. 94 in G major, Hob.I:94, II (1791)

In naming any binary or ternary form, use the terms sectional or continuous before binary or ternary, for example “*sectional* binary,” “*continuous* binary,” “*sectional* ternary,” or “*continuous* ternary.”

Other descriptors include “**two-reprise**,” which means *both* the first section (the A section) and second section (the A’ or B section) are repeated, and “rounded,” used in conjunction with binary (“rounded binary”) to specify that the opening material returns after the contrasting section.

In the following sections we will discuss three types of binary forms:

1. Balanced Binary
2. Rounded Binary
3. “Simple” Binary (usually called “binary”)

24.3 Balanced Binary

A **balanced binary** form, according to Douglass Green in his book, *Form in Tonal Music*, features a binary form with a first section (the A section) ending in a new key, and the second section ending *with essentially the same cadence*, now transposed to the original key, as in the following piece by Bach.

First Section

These 9 bars modulating from F major to C major are transposed in the last 9 bars.

Second Section

Cadence in C major

These 9 bars are modulating from Bb major to F major.

Cadence in F major

YouTube: <https://www.youtube.com/watch?v=HFeLqgVLxBM>

Figure 24.3.1 J.S. Bach, Invention No. 8 in F major, BWV 779

Because the first section of a balanced binary ends in a new key, it is inherently a *continuous* binary form.

Balanced binary form can be found in movements from the Baroque era, including dance suites by Bach, Handel, and others. The movement below shows the endings of the first and section sections of the Courante from J.S. Bach's French Suite No. 6 in E major, BWV 817.

YT: jrHP6Fp1yUY

Figure 24.3.2 J.S. Bach, French Suite No 6 in E, BWV, 817 Courante, bars 15–16

YT: jrHP6Fp1yUY

Figure 24.3.3 J.S. Bach, French Suite No 6 in E, BWV, 817 Courante, bars 31–32

24.4 Rounded Binary

In a **rounded binary** form, the material at the beginning of the first section returns, often shortened, after a contrasting phrase at the beginning of the second section. A generic phrase diagram of rounded binary form is shown below.

Below is an example of a rounded binary form.

First Section

Phrase 1

Phrase 2

Second Section

Phrase 3 (contrasting material and texture)

Phrase 4 (opening melody returns)

YT: zHtXRBi91dA

Figure 24.4.1 Mozart, Piano Sonata in D major, K. 284, III.

Because both the first section (the A section) and second section (the B section) repeat in the example above, this form would be called “two-reprise continuous rounded binary form.”

Another example of a rounded binary form is below.

First Section
Phrase 1

Second Section
Phrase 3 (melodically related to first phrase)

Phrase 4 (opening melody returns)

YT: 2vs-Crxw0mE

Figure 24.4.2 Schubert, 20 Minuets, D. 41, No. 18 in F major

This form of the example above would be called “two-reprise continuous rounded binary form” because:

- “Two-reprise” means both the first and second sections repeat
- “Continuous” means the first section does not end on the tonic chord
- In a rounded binary form the opening melody returns after contrasting material

Rounded binary form is often encountered in compositions during the Classical era (1750–1825) in music by Haydn, Mozart, and Beethoven, especially as the form of a theme from a theme and variations, and as the minuet and/or trio section in a Minuet and Trio.

24.5 Simple Binary

“Simple” binary is a term used to describe a binary form that does not have features like the similar endings of a balanced binary or the return of opening material like the rounded binary. You will encounter this type of binary form in music especially throughout the Baroque era, as well as in the early Classical era.

First Section

(starts in G minor)

(ends in B♭ major)

Second Section (develops melody and motives from first section)

(begins in B♭ major)

(back in G minor)

(opening melody does not return—not rounded binary)

YouTube: <https://www.youtube.com/watch?v=KMrJxhYj3tc>

Figure 24.5.1 J.S. Bach, English Suite No 3 in G minor, BWV 808, Gavotte I.

Notice in the example above that the first section and second section can begin similarly in a binary form, resulting in the large-scale form AA'. The second section often features development of the primary idea from the first section. We will discuss development in the next chapter.

24.6 Binary Principle

Binary principle, as defined by Peter Spencer and Peter Temko in their book *A Practical Approach to the Study of Form in Music*, states that the first section of a binary form modulates to a new key and the second section modulates back to the first key. We find this principal exemplified in a high percentage of binary forms in the Baroque era, and diagrammed in the example below.

Figure 24.6.1 Diagram illustrating Binary Principle

24.7 Ternary Form

Ternary form is usually diagrammed as ABA and is described as “statement, digression, restatement.” Green, Douglass M. *Form in Tonal Music: an Intro-*

duction to Analysis. 2d ed., Holt, Rinehart and Winston, 1979, p. 84 A piece in a rather simple and straightforward ternary is shown below.

The musical score is for a piece in E-flat major, 2/4 time, consisting of six systems of piano and forte dynamics. The key signature has three flats (B-flat, E-flat, A-flat). The piece is in a ternary form, with the first system marked *mf*, the second *p*, the third *f*, the fourth *p*, the fifth *f*, and the sixth *p*. The piece concludes with a *poco rit.* marking.

YT: BJviMnAB_jg

Figure 24.7.1 Mozart, Andante in E-flat major, K. 15mm

Below is a diagram of K. 15mm by Mozart.

Figure 24.7.2 Diagram illustrating Binary Principle

Character pieces from the Romantic era with titles such as “Nocturne,” “Intermezzo,” and “Song Without Words,” among others, by composers such as Schubert, Chopin, Mendelssohn, Schumann, and Brahms, are often in a larger ternary form where each section might be longer than eight bars.

Below are examples from a larger ternary piece, Rachmaninov’s Prelude in C-sharp minor, Op.3 No.2.

YT: sCtixpIWBto

Figure 24.7.3 Rachmaninov, Prelude in C-sharp minor, Op. 3 No. 2, First A section bars 1–13

Tempo primo

YT: sCtixpIWBto

Figure 24.7.5 Rachmaninov, Prelude in C-sharp minor, Op.3 No.2, Second A section bars 45–61

24.7.1 Compound Ternary

A **compound ternary** is a ternary form in which one of the sections (the A or the B) is itself a binary or ternary form. Examples can be found in the minuet and trio as well as the da capo aria.

In the next section, we will examine the differences between rounded binary and ternary.

24.8 Distinguishing between Rounded Binary and Ternary

In homework and on the test, you will encounter pieces that are five or six phrases long that could be rounded binary or ternary. While other authors have their own means to differentiate rounded binary from ternary, this text offers the following criteria to consider:

1. *Proportion*: consider the proportion of the contrasting section to the other sections. If the contrasting section is too small to stand alone, the form is more likely to be rounded binary.
2. *Nature*: consider the nature of the contrasting section.
 - (a) If the melody is built from motives from the first section, the form is likely to be a rounded binary. Ternary form will have a contrasting melody in the contrasting section.

- (b) If the harmony consists mostly of a dominant pedal, or a V chord alternating with a I or I_4^6 chord, the form is likely to be a rounded binary.

3. *Era*: consider the era when the piece was written. A piece by a Baroque composer (J.S. Bach, Handel, Scarlatti, Couperin) or Classical composer (Haydn, Mozart, and Beethoven) is more likely to be in rounded binary form, whereas a piece by a Romantic era composer (Schubert, Schumann, Chopin, Mendelssohn, and Brahms, among others) is more likely to be in ternary form. Note that these are generalities. Baroque and Classical composers wrote compositions in ternary form and Romantic composers wrote pieces in rounded binary form.

Consider the following piece by Beethoven:

Vivace moderato.

The musical score is for a piece by Beethoven, marked "Vivace moderato." It is in 3/4 time and consists of three systems of music. The first system begins with a piano (*p*) dynamic. The melody in the right hand is a series of eighth and sixteenth notes, while the left hand provides a harmonic accompaniment with chords and a dominant pedal point. The second system continues the melody and accompaniment, ending with a repeat sign. The third system begins with a mezzo-forte (*mf*) dynamic and ends with a "poco rit." marking. The melody in the right hand is a series of eighth and sixteenth notes, and the left hand continues the harmonic accompaniment with chords and a dominant pedal point.

YT: hpQBbomOMj0

Figure 24.8.1 Beethoven, Eleven Bagatelles, Op. 119, No. 9

In terms of proportion, bars 9–12 contain contrasting material to bars 1–8. Because the contrasting material lasts for half as long as the open section, we consider the proportion as pointing toward rounded binary.

In terms of the nature of the contrasting section, the melody is built from the contour of the first four notes of the first measure, and the harmony alternates between V and I_4^6 . Both the harmony and melody point us in the direction of rounded binary.

Finally, consider the era in which Beethoven lived. Is he considered a Classical or Romantic composer? This is a difficult question to answer, as Beethoven is a unique figure who is a bridge between the Classical and Romantic eras. However, it's generally safe to consider Beethoven as belonging to the Classical era, and therefore as likely to write a rounded binary form.

You will encounter examples on homework and the test where these three criteria are not unanimous and you will have to weigh the evidence to come to a conclusion.

24.8.1 Written-Out Repeats

Occasionally you will encounter an example where the repeats are written out. When you encounter such a piece, put the repeats in your diagram even though there are not in the score.

24.9 Practice Exercises

Day One

1. For Handel's Gavotte, HWV 491, please fill in the blanks below the staves and diagram the form. Also, name the form. You will need to determine which notes are non-chord tones in order to determine Roman numerals.

Allegretto

YT: IHEwWbK2fBw

Figure 24.9.1 Handel, Gavotte, HWV 491

For the piece above, complete the following diagram based on your analysis. Include section labels using uppercase letters, phrase labels using lowercase letters, and cadences using the abbreviations PAC, IAC, HC, DC, PC.

Circle all of the terms that apply to the name of the form:

TWO-REPRISE SECTIONAL CONTINUOUS ROUNDED BALANCED BINARY TERNARY

2. For the theme from first movement of Mozart's Piano Sonata in A major, K. 331, please fill in the blanks below the staves and diagram the form. Also, name the form.

The musical score is for the first movement of Mozart's Piano Sonata in A major, K. 331. It is in 3/4 time, A major, and consists of 16 measures. The score is divided into four systems of two staves each. The first system (measures 1-4) begins with a piano introduction (piano, p) and a first section (A) of 4 measures. The second system (measures 5-8) continues the first section (A) and introduces a second section (B) of 4 measures. The third system (measures 9-12) continues the second section (B) and introduces a third section (C) of 4 measures. The fourth system (measures 13-16) concludes the third section (C) and the piece. Dynamics include piano (p), forte (f), and piano (p). The form is a rounded binary form.

YT: vp_h649sZ9A

Figure 24.9.2 Mozart, Piano Sonata K. 331, I

For the piece above, complete the following diagram based on your analysis. Include section labels using uppercase letters, phrase labels using lowercase letters, and cadences using the abbreviations PAC, IAC, HC, DC, PC.

Circle all of the terms that apply to the name of the form:

TWO-REPRISE SECTIONAL CONTINUOUS ROUNDED BALANCED BINARY TERNARY

3. For this Polonaise in F major by Mozart, please fill in the blanks below the staves and diagram the form. Also, name the form.

Chapter 25

Sonata and Rondo Forms

25.1 Sonata Form

Sonata form, also known as “first-movement form,” is “[t]he most important principle of musical form, or formal type, from the Classical period well into the 20th century,” according to the Grove Music Online. The purpose of this chapter is to serve as an introduction to formal, thematic, and harmonic aspects of sonata form. We will focus on sonata form as it existed during the height of the Classical era. Further and more detailed study of sonata form occurs in higher-level music theory courses.

25.1.1 Diagram of Sonata Form

Below is a generalized diagram of sonata form, which serves as our starting point. Real-world examples will contain differences and elaborations.

	EXPOSITION				DEVELOPMENT		RECAPITULATION			
	PT	transition	ST	(CT)	Fragmentation & sequencing	Retransition	PT	transition	ST	(CT)
In major:	I	modulating	V	V	V modulations	V pedal	I	tonicizations	I	I
In minor:	i	modulating	III	III	III modulations	V pedal	i	tonicizations	i	i

PT = Primary Theme
ST = SecondaryTheme
CT = ClosingTheme

It is fairly common for a piece in sonata form to have multiple secondary themes (ST^1 , ST^2). In some sonatas, the development section features new material. Some sonatas will not have a closing theme. As we work with real world examples, you will see the ways in which composers realize sonata form.

While the diagram above designates three large sections (exposition, development, recapitulation), repeat signs in sonatas from the classical era designate the sonata as a two-reprise form—the exposition repeats, then the development and recapitulation repeat as a single unit. Douglass Green, in his book *Form in Tonal Music*, notes the sonata’s evolution from and synthesis of rounded binary and balanced binary:

The typical sonata form, as it appeared in the 18th century, is a combination of rounded and balanced binary. It begins the return with a restatement of the opening of part one, as in the rounded binary, and it closes with a restatement of the final sections (second and closing themes) of part one transposed to the tonic, as in the balanced binary.

25.1.2 Sonatina Form

While “sonatina” is sometimes understood to mean a short sonata or an easy sonata for beginners, in terms of form, **sonatina form** is sonata form without the development section. Sonatina form is sometimes encountered in the second, slow movement of a larger work like a symphony, as well as in overtures. A familiar piece in sonatina form is the “Miniature Overture” from *The Nutcracker* by Tchaikovsky.

YouTube: <https://www.youtube.com/watch?v=JRXIDepquCg>

Figure 25.1.1 Tchaikovsky, *The Nutcracker*, “Miniature Overture” (1892)

Exposition			Recapitulation		
PT	ST	CT	PT	ST	CT
0:00	0:49	1:28	1:40	2:30	3:09

25.1.3 Sonata Principle

Important to sonata form is sonata principle, which Charles Rosen discusses in his book *Sonata Forms*.

The exposition of a sonata form presents the thematic material and articulates the movement from tonic to dominant in various ways so that it takes on the character of a polarization or opposition. The essential character of this opposition may be defined as a large-scale dissonance: the material played outside the tonic (i.e., in the second group) is dissonant with respect to the center of stability, or tonic. Sonata style did not invent this concept of *dissonant section*, but it was the first style to make it the generating force of an entire movement.¹

Rosen continues:

The dominant is conceived as a *dissonant tonality* in the exposition....The polarization, in fact, leads to the concept of a *dissonant section*, which raises the dissonant interval or chord to a higher power: that is, a simple reintroduction of the tonic key will no longer serve as a resolution, but the section outside the tonic needs to be resolved as a whole.²

¹ *Sonata Forms*, Revised Edition, 1988, p. 229

² *Sonata Forms*, Revised Edition, 1988, p. 244

25.1.4 The Monothematic Sonata

Haydn was especially fond of restating the Primary Theme in the dominant where the Secondary Theme would normally occur. This reinforces the idea that the tonal design of a sonata was as important as thematic design.

25.2 The Four Structural Functions in Music

In the “Structural Functions” chapter of *A Practical Approach to the Study of Form in Music*, Peter Temko and Peter Spencer enumerate four structural functions.

1. Expository function
2. Transitional function
3. Developmental function
4. Terminative function

25.2.1 Expository Function

Music expressing **expository function** maintains a stable tonal center and clear melodies, usually with well-defined phrases. The vast majority of the music we encountered in binary and ternary form in the last chapter was expository in nature. Additionally, the primary and secondary themes in a sonata form are usually have expository function. Below is the secondary theme from the first movement of Mozart’s Piano Sonata, K. 333.

The musical score for the secondary theme of Mozart's Piano Sonata, K. 333, first movement, is presented in three systems. The key signature is B-flat major (two flats) and the time signature is 3/4. The first system, labeled 'a', shows the right hand playing a melody with eighth and sixteenth notes, while the left hand provides a simple harmonic accompaniment. The second system, labeled 'b', continues the melody with more complex rhythmic patterns. The third system, labeled 'a', returns to a simpler melodic line. The labels 'IAC in Bb' and 'HC in Bb' indicate the function and tonal center of the sections.

b'

Figure 25.2.1 Mozart, Piano Sonata, K. 333, I, Secondary Theme

Notice the perfect authentic cadence that closes off this four-phrase parallel double period within the larger sonata form. Cadences are important demarcations within a form.

25.2.2 Transitional Function

Music of **transitional function** moves from one tonal center to another and often features a contrasting accompanimental texture more rhythmically active than preceding expository material. Tonicizations may also occur within a transition. Transitions are sometimes called bridges. Mozart and Haydn often ended their sonata form transitions with a half cadence followed by a rest to signal that the secondary theme was about to commence. Again, notice the importance of cadences to demarcate the form.

YT: 34stw2rF0t8

Figure 25.2.3 Mozart, Piano Sonata, K. 284, I.

25.2.3 Developmental Function

Music with **developmental function** often contains sequences and fragmentation of earlier melodies. In addition, developmental music modulates through multiple keys. Phrase lengths may be irregular and **elisions** may be used by the composer to keep the listener off balance.

It can sometimes be difficult to distinguish between transitional and developmental music. A development section is typically longer than a transition and therefore will contain more sections of a varying nature and as well as a greater number of modulations.

Examples from a development section can be found in [Section 11.1](#) of this text. Note the fragmentation and sequencing of melodic ideas as well as the different keys expressed in the examples throughout that section.

25.2.4 Terminative Function

Terminative function is typically expressed through a rather emphatic alternation of tonic and dominant harmonies, usually to affirm a tonal center. The closing theme of a sonata has terminative function.

Go to the [Practice Exercises](#) at the end of this chapter to practice identifying these four structural functions aurally.

25.3 Rondo Form

A **rondo** is a piece that begins with a refrain (an A section) that alternates with episodes (B and C). The 5-part rondo, an example of which we encountered in an earlier chapter, has ABACA form or ABABA form. The 7-part rondo typically has ABACABA form, although other designs exist. A diagram for 7-part Classical form is shown below.

	A	transition	B	retransition	A	transition	C	retransition	A	transition	B	retransition	A
Major:	I		V		I		i, vi, or IV		I		I		I
Minor:	i		III		i		I, VI, or iv		i		i		i

The refrain (the A section) is always in tonic. The first episode (the B section) was typically in a closely related key—the dominant (V) if in major or the mediant (III) if in minor. There was greater variety of keys used for the second episode (the C section), including tonic minor in a major sonata or the submediant (vi or VI). A retransition in this case is defined as a transition returning to material previously heard.

Note that the B section being first stated in the dominant then later in tonic is an example of sonata principle, a principle which occurred in many Classical era pieces (see Charles Rosen’s *Sonata Forms* for more on sonata principle).

An example of Classical seven-part rondo form is found below in the third and final movement of Beethoven’s *Pathétique Sonata*, Op. 13.

YT: 05Xyc2FHHRI

Figure 25.3.1 Beethoven, *Pathétique Sonata*, Op. 13, III (1798), Refrain

A brief sequential transition follows, leading to the mediant (E♭ major).

YT: 05Xyc2FHHRI

Figure 25.3.2 Beethoven, Pathétique Sonata, Op. 13, III, Transition

The first episode (the B section) is in the mediant, Eb major, the relative major of C minor. The primary purpose of this first episode is to establish a key different than the starting key. Notice that the themes during this episode are not particularly tuneful.

YT: 05Xyc2FHHRI

Figure 25.3.3 Beethoven, Pathétique Sonata, Op. 13, III, First Episode

The final melody of the first episode is clearly in the form of a parallel period.

YT: 05Xyc2FHHRI

Figure 25.3.4 Beethoven, Pathétique Sonata, Op. 13, III, Conclusion of First Episode

A retransition follows and leads to a half cadence on a G major chord. The refrain follows in C minor.

YT: 05Xyc2FHHRI

Figure 25.3.5 Beethoven, Pathétique Sonata, Op. 13, III, Retransition to Second Refrain

The second episode (the C section) follows immediately after the refrain. The second episode is in A \flat major, the submediant (VI) of C minor.

YT: 05Xyc2FHHRI

Figure 25.3.6 Beethoven, Pathétique Sonata, Op. 13, III, Second Episode

A retransition follows the second episode, ending on a half cadence on G major.

Figure 25.3.7 Beethoven, Pathétique Sonata, Op. 13, III, Retransition to Third Refrain

An abbreviated version of the refrain follows, leading directly to a restatement of the second episode (the B section), this time in tonic major (C major).

YT: 05Xyc2FHHRI

Figure 25.3.8 Beethoven, Pathétique Sonata, Op. 13, III, Third Refrain and Second Episode restated in tonic

Following the Second Episode is brief retransition that develops final motives of that episode through sequences.

YT: 05Xyc2FHHRI

Figure 25.3.9 Beethoven, Pathétique Sonata, Op. 13, III, Retransition to Final Refrain

After one last statement of the refrain in C minor, the Coda begins immediately after the cadence closing the refrain.

YT: 05Xyc2FHHRI

Figure 25.3.10 Beethoven, Pathétique Sonata, Op. 13, III, Final Refrain

YT: 05Xyc2FHHRI

Figure 25.3.11 Beethoven, Pathétique Sonata, Op. 13, III, Coda

To review a simple, five-part rondo form, see the section on the second movement of *Eine kleine nachtmusik* in the chapter on [Creating Contrast Between Sections](#).

25.3.1 Sonata Rondo Form

Sonata rondo form is a rondo in which the second episode (the C section) is replaced by a development section, resulting in a design of A-B-A-Dev.-A-B-A.

25.4 Rondo Character

Rondo character is characterized by quick tempo in duple meter with light character, typically achieved through the use of staccato articulation. This duple meter could be either simple ($\frac{2}{4}$) or compound ($\frac{6}{8}$). During the Classical era, the final movement of a multi-movement composition, e.g. a sonata, quartet, or symphony, was often in rondo character. Not all pieces in rondo form are in rondo character.

Listen to the following six examples to develop familiarity with rondo character.

1.

YT: ysB5SeaJp6s

25.5 Standard Forms in a Multimovement Classical Piece

Below are the forms commonly encountered in the various movements of Classical symphonies, string quartets, and sonatas.

1. First movement: Sonata form
2. Second movement: Ternary form (ABA), sonatina form, or five-part rondo
3. Third movement: Minuet and Trio (Compound Ternary)
4. Fourth movement: Rondo form, sonata form, or sonata rondo form

25.6 Practice Exercises

1. Identify the structural function of each excerpt below as expository, transitional, developmental, or terminative. Aurally identify the tonic and determine if the key is maintained or if other keys occur. Listen for cadences to demarcate the form.

Chapter 26

Voice Leading Triads

26.1 Voice Leading

Voice leading, also known as part writing, refers to rules about melodic motions of voices involved in harmonic progressions. The primary concerns behind voice leading rules are independence of parts, voicing of chords, and economy of melodic motion for the sake of singable parts.

“SATB” voice leading refers to four-part chords scored for soprano (S), alto (A), tenor (T), and bass (B) voices. Three-part chords are often specified as SAB (soprano, alto, bass) but could be scored for any combination of the three voice types. SATB voice leading will also be referred to as “chorale-style” voice leading.

Figure 26.1.1 Soprano, Alto, Tenor, and Bass voices on the grand staff in “chorale-style” voice leading

“Piano-style” voice leading means the three upper parts are in the upper staff (the right hand part) and the bass is the only voice in bass clef (the left hand part).

Figure 26.1.2 “Piano-style” voice leading

26.2 Types of Motion

Definitions must be set out regarding types of motion between two parts.

- *Contrary motion* occurs when the two voices move in opposite direction to each other by step or leap.
- *Oblique motion* occurs when one voice stays the same and the other voice moves up or down by step or leap.
- *Similar motion* occurs when both voices move in the same (or “similar”) direction—both up (by step or leap) or both down (by step or leap); similar motion is also called “direct” motion
- *Parallel motion* is a specific type of similar motion and occurs when both voices move in the same direction by the same interval—both up by step, or both down by a third.

Figure 26.2.1 The four types of motion

26.3 Objectionable Parallels

When writing in three or four parts, avoid having any two voices move in parallel fifths or parallel octaves (and their octave equivalents—parallel twelfths and parallel unisons). In the Renaissance, Baroque, Classical, and Romantic eras, these objectional parallels were thought to destroy the independence of the voices. Parallel 3rds, 4ths, and 6ths were considered acceptable. Parallel 2nds and 7ths generally were not used.

Figure 26.3.1 Objectionable parallel fifths and parallel octaves

26.4 Voice Ranges

For the purpose of music theory class, we will set out restrictions for voice ranges that are likely more limited than those found among vocalists in the class. These voice ranges are based on those most commonly found in J.S. Bach’s *371 Chorales*.

Figure 26.4.1 Voice ranges for soprano, alto, tenor, and bass voices

26.5 Rules of Melody

Rules of melody have been included in books on composing, writing counterpoint, and music theory for centuries. The purpose of the rules of melody as described in this text are to aid in the construction of singable melodies and to reflect a summary of melodic practice in music. (Remember that each part in an SATB composition is considered a melody.) Because these rules of melody are based stylistically on the melodies found in J.S. Bach's *371 Chorales*, you will no doubt be familiar with exceptions that have occurred in music composed since Bach's death in 1750.

1. **Tendency tones** should resolve: $\hat{7}$ goes to $\hat{8}$ and, to a lesser extent, $\hat{4}$ goes to $\hat{3}$ (other tendency tones are $\hat{6}$ and $\hat{2}$, both of which should resolve down by step)
2. Avoid augmented intervals
3. Leaps larger than a 4th and leaps of diminished intervals should change direction after the leap
4. Consecutive leaps should outline a triad

The following example demonstrates how difficult a melody can be to sing when these rules are broken

Figure 26.5.1

26.6 Rules of Spacing

Generally, the upper three voice parts (soprano, alto, and tenor) are kept close together. The general rule of spacing is to keep the distance between soprano and alto as well as the distance between alto and tenor within an octave of each other. Allowing a distance greater than an octave between soprano and alto (or between alto and tenor) is considered **spacing error**. The distance from the bass to the tenor can be greater than an octave.

Figure 26.6.1

In terms of spacing chords, one should consider the spacing that occurs in the overtone series.

Figure 26.6.2 Overtone series starting on C2

Larger spaces between notes occur lower in the overtone series. Consider the voicings of the following chords. Some “ring” or resonate better than others. Notice that all of the notes fall within the voice ranges specified [above](#).

Figure 26.6.3

26.7 Voice Leading Root Position Triads in Four Parts

We are writing in four parts but triads have three notes. We will double the root of every root position chord. (The root is in the bass when a triad is in root position, so we are doubling the bass note in an upper part.)

Principle 26.7.1 Doubling rule for root position triads. *Always double the root in root position triads.*

To move from one chord to the next, consider the interval that occurs melodically in the bass line between the current chord and subsequent one.

26.7.1 Bass movement of the interval of a 3rd or 6th

In the upper three parts (soprano, alto, and tenor): retain the two common tones and move the other voice by step

Figure 26.7.2

26.7.2 Bass movement of the interval of a 4th or 5th

In the upper three parts, do one of the following:

1. Retain the common tone and move the other two voices by step

Bass moves by 5th Bass moves by 4th

C: I V C: I IV

2. Move all of the upper voices in the same direction (each upper voice will move by a 2nd or 3rd to the nearest chord member in the second chord)

Bass moves by 5th Bass moves by 4th

C: I V C: I IV

26.7.3 Bass movement of the interval of a 2nd

Move the three upper parts in contrary motion to the bass line.

Bass moves by 2nd

C: I ii

Figure 26.7.3

Exception: When the bass moves by the interval of a 2nd in the deceptive progression in the minor mode (V–VI in C minor), *always* move the 3rd of the V chord up by step while the other notes (the 5th and the doubled root) move in contrary motion to the bass. In this situation, two voices move in an upward direction and two voices move in a downward direction. This results in a doubled 3rd in the VI chord. In the major mode, use this voice-leading solution if $\hat{7}$ is in the soprano voice (because it is a [tendency tone](#)).

bad aug. 2nd

c: V VI c: V VI

Figure 26.7.4 Voice leading the deceptive progression in minor

The following two examples demonstrate the two possible ways to deal with the deceptive progression in the major mode.

Figure 26.7.5 $\hat{7}$ in the soprano voice in the deceptive progression in major

Figure 26.7.6 $\hat{7}$ in an inner voice in the deceptive progression in major

26.7.4 Repetition of the bass note

Repeat the upper three notes or arpeggiate the upper notes to different chord members while maintaining the voicing of a doubled the root, one 3rd and one 5th.

Figure 26.7.7 Repeated notes in the bass line

26.8 Voice Leading First-Inversion Triads

Instead of focusing on the intervallic distance the bass part travels between roots of chords, voice leading first inversion triads requires focusing on the doubling or voicing of the chord itself. When approaching or leaving a first inversion chord, move as smoothly as possible while avoiding objectionable parallels, spacing errors, and melodic errors.

26.8.1 Voicing a First Inversion Chord

In contrast to the doubling rule for root position chords (i.e., “double the bass”), do *not* double the bass note for first inversion triads. Instead, double the root or fifth, depending on which can be approached and left most smoothly.

Chord progression: $B\flat$, F/A , Gm , C/E , F

Figure labels: $F: IV$, I^6 , ii , V^6 , I

YT: 8ZKxI8d4VbM

Figure 26.8.1 J.S. Bach, Chorale 237, “Gott lebel noch”, BWV 320

Chord progression: D , Bm , $D/F\#$, G

Figure labels: $D: I$, vi , I^6 , IV

YT: 3B9KD9CJ3tA

Figure 26.8.2 J.S. Bach, Chorale 153, “Alle Menschen müssen sterben”, BWV 262

If the 3rd of a first inversion *is* doubled, it will be in one of the following situations:

1. Diminished triads in first inversion—always double the third (the bass), not the root or fifth

Bb Eb A/C Bb F/A

Bb: I IV $\text{vii}^\circ 6$ I V⁶

YT: Lu1-S82JIeM

Figure 26.8.3 J.S. Bach, Chorale 103, “Nun ruhen alle Wälder”, BWV 392

2. Consecutive first inversion chords—alternate between doubling the third and not doubling the third

A E/G# D/F# C#/m/E Bm/D

A: I V⁶ IV⁶ iii^6 ii^6

consecutive 1st inversion triads

YT: QSv7SkXmhFI

3. Approached in opposite direction in both parts

F: ii I⁶ IV ii^6 I⁶ ii^7 $\text{vii}^\circ 6$

YT: 70QrWJvezT4

Figure 26.8.5 Palestrina, *Missa Aeterna Christi Munera*, Sanctus

Note that you should never double the third of the V chord because it is the leading tone ($\hat{7}$).

26.9 Voice Leading Second Inversion Triads

When a triad is in second inversion, double the fifth (the bass note).

YT: ivm4RACsrBU

Figure 26.9.1 J.S. Bach, Chorale 204, “Wer weiß, wie nahe mir”, BWV 166

26.10 Special Situations

Avoid parallel fifths when the *roots* of triads are a second apart, as in the following examples:

1. ii^6 to I_4^6 (see the first measure in the examples below)
2. I to vii^{o6} (see the second measure the in examples below)

Figure 26.10.1 Parallel fifths when *roots* are a 2nd apart

Figure 26.10.2 Parallel fourths as a corrective when roots are a 2nd apart

In any such situation where the roots are a second apart (even if the chords are inverted), revoice each chord so the 5th of the chord is *below* the root of the chord in the upper voices

26.11 Types of Six-Four Chords

When you are harmonizing melodies and writing music, there are three situations where it is appropriate to use a $\frac{6}{4}$ chord.

1. Pedal $\frac{6}{4}$
2. Passing $\frac{6}{4}$
3. Cadential $\frac{6}{4}$

The pedal $\frac{6}{4}$ typically occurs in the patterns $I-IV\frac{6}{4}-I$ or $V-I\frac{6}{4}-V$.

Figure 26.11.1 Examples with the Pedal Six-Four

The passing $\frac{6}{4}$ typically occurs in the patterns $I-V\frac{6}{4}-I^6$ (or its [retrograde](#)) and $IV-I\frac{6}{4}-IV^6$ (or its retrograde).

Figure 26.11.2 Examples with the Passing Six-Four

In an earlier section we discussed the [Cadential \$\frac{6}{4}\$ chord](#). Please refer to that section to review the cadential $\frac{6}{4}$ chord.

26.12 Summary of Doubling Rules for Triads

To generalize, here are the doubling rules for voice leading triads in root position, first inversion, and second inversion:

- Root Position Chords: DOUBLE THE BASS
- First-Inversion Chords: DO NOT DOUBLE THE BASS
 - Exception: $vii^{\circ 6}$ and $ii^{\circ 6}$: DOUBLE THE BASS
 - Exception: Consecutive first inversion chords—alternate between DOUBLE THE BASS and DO NOT DOUBLE THE BASS
- Second-Inversion Chords: DOUBLE THE BASS

26.13 Practice Exercises

Day One

D: _____

6. Given the bass line and [figured bass symbols](#), analyze the Roman numerals and add soprano, alto, and tenor parts in chorale style. Review the special rule for doubling in diminished triads in first inversion. You may wish to review [figured bass with chromatic alterations](#).

g: _____

7. Harmonize the melody making sure your progression follows the [Harmonic Flowchart](#) (analyze the [harmonic function](#) of each chord, abbreviated as “HF”), then add alto, tenor, and bass parts in chorale style following rules of good voice leading. Use first-inversion chords to make a smoother bass line.

Bb: _____

HF: _____

Day Four

8. Analyze the figured bass symbols to specify Roman numerals with inversion symbols below the staff. Add soprano, alto, and tenor parts in keyboard style. Specify root, third, and fifth for every chord. Additionally, specify the six-four chord type (pedal, passing, or cadential).

b: _____

$\frac{6}{4}$ chord type: _____

9. For the given Roman numeral progression, provide soprano, alto, tenor, and bass voices in chorale style. Be careful not to exceed any voice’s range. Specify root, third, and fifth for every chord. Additionally, specify the six-four chord type.

c: i iv i_4^6 iv^6 ii^{o6} i_4^6 V VI

$\frac{6}{4}$ chord type: _____ _____

Chapter 27

Voice Leading Seventh Chords

27.1 Voice Leading Seventh Chords

There is one general rule for voice leading any seventh chord: resolve the 7th of the chord down by step. All other voices should move smoothly to the nearest chord tone in a voicing containing the appropriate doubling.

Principle 27.1.1 7th chords. *Resolve the 7th of a 7th chord down by step.*

Textural reduction:

A-flat: I E-flat⁷/D-flat A-flat/C E-flat/G E-flat⁷/G A-flat

resolves down by step

V₂⁴ I⁶ V⁶ V₅⁶ I

Figure 27.1.2 Beethoven, Pathétique Sonata, Op. 13, II.

Ich träum-te von bun-ten Blu - men, so wie sie wohl blü-hen im Mai;

Textural reduction:

Ich träum-te von bun-ten Blu - men, so wie sie wohl blü-hen im Mai;

A: I vi ii⁶₅ V⁷ I

YT: 2GGPY3mhqLc

Figure 27.1.3 Schubert, *Winterreise*, D. 911, “Frühlingstraum” (1823)

The one exception to this is in the progression $I-V_3^4-I^6$, which closes the theme of the first movement of Mozart’s Piano Sonata K. 331.

YT: vp_h649sZ9A

Figure 27.1.4 Mozart, Piano Sonata K. 331, I

In the example below, one can see that the 7th resolves up by step.

Figure 27.1.5 The I–V₃⁴–I⁶ progression with acceptable parallel fifths

Notice that parallel fifths occur in this progression because of the upward resolution of the 7th. These parallel fifths may have been deemed less objectionable because they consist of **unequal fifths** (where one of the fifths is in a case of parallel fifths is diminished).

27.2 Voice Leading Successive Seventh Chords

Sometimes you will encounter a situation where there are successive seventh chords. This is especially the case in circle of fifth progressions. When voice leading a circle of fifths progression with root position seventh chords in four parts (SATB), alternate between incomplete seventh chords (without the fifth of the chord) and complete seventh chords, as can be seen in the example below from Vivaldi's Concerto for Two Violins and Cello in D minor, RV 565.

Figure 27.2.1 shows a musical progression in 4/4 time. The chords are Dm, Gm⁷, C⁷, Fmaj⁷, Bbmaj⁷, E^{ø7}, Am⁷, and Dm⁷. The bass line shows the progression d: i, iv⁷ (inc.), VII⁷, III^{M7} (inc.), VI^{M7}, ii^{ø7} (inc.), v⁷, i⁷ (inc.). The treble line shows the progression of the 7th of the previous chord resolving to the 3rd of the next chord, creating acceptable parallel fifths.

YT: qgJwavKDKgY

Figure 27.2.1 Vivaldi, Concerto for Two Violins and Cello in D minor, RV 565, V.

Principle 27.2.2 Voice Leading Successive Root Position 7th chords.

Alternate between complete and incomplete voicings.

If, on the other hand, you are asked to voice lead a circle of fifths progression involving inverted seventh chords, always resolve the seventh of each chord down by step and move the other voices smoothly. You will see the following pattern: two voices will remain on common tones (shown with ties) while the other two voices resolve downward by step.

Figure 27.2.3 Circle of fifths progression with inverted 7th chords (alternating $\frac{6}{5}$ and $\frac{4}{2}$)

Figure 27.2.4 Circle of fifths progression with alternating 7 and $\frac{4}{3}$ chords

27.3 Voice Leading the V^7 to I Progression

In voice leading the V^7 to I progression in four parts, one must deliberately choose one of the following methods:

1. “Strict” resolution:

- (a) Complete V^7 to incomplete I: resolve $\hat{7}$ up and $\hat{4}$ and $\hat{2}$ down. This means resolving the 3rd of the V^7 chord ($\hat{7}$) up and the 7th and 5th of the V^7 chord down. For the sake of consistency in terminology, the examples below label $\hat{7}$, $\hat{2}$, and the 7th of the chord. The incomplete I chord will have a tripled root and one 3rd.

- (b) Incomplete V^7 (no fifth) to complete I.

C: V⁷ I V⁷ I V⁷ I
incomplete complete incomplete complete incomplete complete

2. “Free” resolution:

- (a) If $\hat{7}$ is not in the soprano part, you can resolve it down by the interval of a third to $\hat{5}$.

C: V⁷ I V⁷ I
complete complete complete complete

In piano music you will sometimes find “improper” resolution of the 7th of a chord because it fits the hand better. This should be considered an exception and will not be acceptable in voice leading exercises completed for this class.

Ces - sa, cru - del, tan - to ri - gor!

B \flat : I⁶ V⁶₄ I V⁴₂ I⁶ IV I⁶₄ V⁷ I

YT: -HLk8EDA02M

Figure 27.3.1 Giordani, *Caro mio ben* (1783)

27.3.1 Voice Leading I⁶₄ to V⁷

When I⁶₄ resolves to V⁷, beware of parallel fifths if the fifth is above the root in the I⁶₄ chord. If it is, move all upper voices upward to the closest notes of the V⁷ chord, or to an incomplete V⁷ (no 5th).

musical notation showing the resolution of a C major 6/4 chord to a V7 chord. The notation includes a treble and bass staff. The first measure shows the C major 6/4 chord (C4, E4, F4, G4, A4, C5) and the V7 chord (F4, A4, C5, E5). The second measure shows the resolution with arrows indicating voice movement: the upper voices (F4, A4, C5) ascend, and the lower voices (C4, E4) move down. The third measure shows the resolution to the V7 chord with an inc. (increased) V7 chord (F4, A4, C5, E5).

27.4 The Special Resolution of $\mathbf{vii}^{\circ 7}$ (and $\mathbf{vii}^{\emptyset 7}$)

The $\text{vii}^{\circ 7}$ and $\text{vii}^{\flat 7}$ chords consist entirely of tendency tones ($\hat{7}$, $\hat{2}$, $\hat{4}$, $\hat{6}$). If one resolves all of those tendency tones correctly ($\hat{2}-\hat{1}$, $\hat{4}-\hat{3}$, $\hat{6}-\hat{5}$, $\hat{7}-\hat{8}$), one might write parallel 5ths depending on the voicing of the $\text{vii}^{\circ 7}$ and $\text{vii}^{\flat 7}$ chord. Therefore, be sure to memorize the following principle:

Principle 27.4.1 Resolving vii^{o7}. When the 7th of a vii^{o7} or vii⁷ chord is voiced above the 3rd of the chord, resolve the 3rd of the chord (scale degree $\hat{2}$) up by step while resolving all other tendency tones normally ($\hat{4} - \hat{3}$, $\hat{6} - \hat{5}$, $\hat{7} - \hat{8}$).

Figure 27.4.2 Resolving $\text{vii}^{\text{ø}7}$

The third measure above shows that revoicing the chord is another solution, since parallel 4ths are not objectionable in this situation.

If the 7th of the chord is voiced *below* the 3rd of the chord, resolve all tendency tones normally.

27.5 When to Use Seventh Chords

In your harmonizations of melodies, it is best to use seventh chords to add tension as you approach tonic function. Therefore, sevenths are added most frequently to chords of dominant function (V and vii^o) and chords of pre-dominant function (ii and, to a lesser extent, IV). (See the [harmonic flowchart](#).) For this reason, seventh chords like iii⁷, vi⁷, IVM⁷, and IM⁷ are less commonly used and encountered.

Chapter 28

Voice Leading With Non-Chord Tones

28.1 Voice Leading With Non-Chord Tones

Non-chord tones are common in J.S. Bach's *371 Chorales*, which are our model for voice leading.

F: I V⁶ I V⁶ vi I⁶ IV IV⁶ I

YT: 9m0RWQbSOWA

Figure 28.1.1 J.S. Bach, Chorale 323, “Wie schön leuchtet der Morgenstern”, BWV 172

A: I I IV⁶ V ii vii⁰⁶ I⁶ V I

YT: t5rs2a0Cvr4

Figure 28.1.2 J.S. Bach, Chorale 326, “Allein Gott in der Höh’ sei Erh’”, BWV 104”, BWV 172

28.2 Avoiding Objectionable Parallels

When adding non-chord tones, one must avoid creating **objectionable parallels**. To avoid creating parallel 5ths and 8ves when adding non-chord tones, first identify intervals of 5ths and 8ves between voices in your original voice leading.

Figure 28.2.1 Progression with 8ves and 5ths identified

Avoid adding non-chord tones that move by step into notes separated by a 5th or 8ve.

Figure 28.2.2 Parallel 5ths and 8ves created by non-chord tones

It is best to avoid adding non-chord tones in two voices on the same beat unless they are moving in parallel 3rds or 6ths.

28.3 Adding Non-Chord Tones to a Chord Progression

Here are ideas for how to add non-chord tones (or “embellishments”) to one of the voice parts of an SATB chord progression.

1. Repeated note: add upper or lower neighbor

Figure 28.3.1

2. Step down:

- (a) Add a **suspension** by delaying the resolution of the note

Figure 28.3.2

- (b) Add an escape tone by moving by step in the opposite direction of the original stepwise movement, then leap

Figure 28.3.3

- (c) Add a double neighbor

Figure 28.3.4

- (d) Add a chromatic passing tone

Figure 28.3.5

- (e) Add an anticipation

**Figure 28.3.6**

3. Step up:

- (a) Add a chromatic passing tone

**Figure 28.3.7**

- (b) Add an anticipation

**Figure 28.3.8**

- (c) Add an appoggiatura by leaping one step beyond the note of resolution, placing the appoggiatura on the beat, displacing the note of resolution to occur after the beat

**Figure 28.3.9**

- (d) Add a double neighbor

**Figure 28.3.10**

- (e) Add retardation by delaying resolution of the note (rarely used)

**Figure 28.3.11**

4. Leap of 3rd:

- (a) Fill in the 3rd with a passing tone

**Figure 28.3.12**

- (b) Add an appoggiatura by leaping one step beyond the note of resolution, placing the appoggiatura on the beat, displacing the note of resolution to occur after the beat

**Figure 28.3.13**

5. Leaps of 4th or larger: do not embellish (for now)

Here is a basic framework with all possibilities labeled.

G D Em C

G: I V vi IV

Here is one possible solution:

G D Em C

G: I V vi IV

Notice that, when non-chord tones are added to different voices on the same beat, consonant intervals (3rds, 5ths, 6ths, or 8ves) are made. If consonant intervals can't be made, the voices are staggered rhythmically (as occurs on beats 3 and 4 in measure one of the example above).

28.4 Practice Exercises

1. Analyze the chords with Roman numerals in the blanks below the staff, then add the specified non-chord tones, specifying suspensions with the appropriate interval numbers.

e: — — — — — — —

2. Analyze the figured bass below to write Roman numerals in the blanks below the staff. Then add the following non-chord tones: (1) 3 suspensions, (2) one passing tone, (3) one neighbor tone, and (4) one anticipation.

b: _____

3. Voice lead the following Roman numeral progression then add the following non-chord tones: (1) a neighbor tone during beat one, (2) a neighbor tone during beat two, (3) an appoggiatura on beat 3, (4) a suspension on beat four, (5) a suspension on beat 5, (6) an anticipation during beat six, and (7) a suspension on beat 7.

b: _____

F: I vi IV V vi IV I

Chapter 29

Voice Leading Chromatic Harmonies

29.1 Voice Leading Secondary Chords

When voice leading secondary chords, one largely follows voice leading rules for seventh chords:

1. Resolve the 7th of a chord down by step.

2. Alternate complete voicings with incomplete voicings when voice leading successive root position seventh chords . Note that with secondary chords, the 3rd of the chord, typically a raised note, will resolve down by half step to the 7th of the chord, which is a diatonic note that cancels out the chromaticism of the previous note.

C: V^7/iii V^7/vi V^7/ii V^7/V
 complete incomplete complete incomplete

3. Follow the [principle](#) for resolving $vii^{\circ 7}$ and $vii^{\flat 7}$ when dealing with secondary $vii^{\circ 7}$ and $vii^{\flat 7}$ chords.

C: $vii^{\circ 7}/ii$ ii

- (a) An important exception occurs when $vii^{\circ 7}/V$ or $vii^{\flat 7}/V$ resolves to V. If the melody requires the 7th of the chord to be voiced above the 3rd of the chord, solve the example by writing parallel (unequal) fifths instead of the doubling of the leading tone, which is considered less acceptable.

c: $vii^{\circ 7}/V$ V $vii^{\circ 7}/V$ V

29.2 Voice Leading Borrowed Chords

Borrowed chords, or chords making use of mode mixture, are handled similarly to their diatonic versions in terms of voice leading, e.g., $ii^{\flat 7}$ is handled similarly to ii^7 . In any of the borrowed chords with $\flat 6$, resolve this tendency tone down by step whenever possible.

Principle 29.2.1 Voice Leading Borrowed Chords. *Resolve $\flat\hat{6}$ down by step when it is a chord member of a borrowed chord.*

a: It^{+6} V a: Fr^{+6} V a: Ger^{+6} V

Figure 29.4.1 $\hat{4}$ to $\hat{5}$ in resolution to V

The $\hat{4}$ scale degree also resolves to $\hat{5}$ when an augmented sixth chord resolves to the Cadential $\frac{6}{4}$ chord.

a: It^{+6} $i\frac{6}{4}$ a: Fr^{+6} $i\frac{6}{4}$ a: Ger^{+6} $i\frac{6}{4}$

Figure 29.4.2 $\hat{4}$ to $\hat{5}$ in resolution to Cadential $\frac{6}{4}$

With the enharmonic German augmented sixth chord (abbreviated $EnGer^{+6}$, containing $\flat\hat{6}$, $\hat{1}$, $\sharp\hat{2}$, and $\sharp\hat{4}$), $\sharp\hat{2}$ and $\sharp\hat{4}$ resolve upward to members of a major $I\frac{6}{4}$ chord.

A: $EnGer^{+6}$ $I\frac{6}{4}$

Figure 29.4.3 $\sharp\hat{2}$ to $\sharp\hat{2}$ resolving upward when in an $EnGer^{+6}$

The exception to $\hat{4}$ to $\hat{5}$ occurs when an augmented sixth chord resolves to V^7 , in which case $\hat{4}$ resolves to $\flat\hat{4}$, which is the 7th of the V^7 chord.

Figure 29.4.4 $\sharp\hat{4}$ to $\sharp\hat{4}$ in resolution to V⁷

If you voice lead an augmented sixth chord to something other than V, V⁷, or i_4^6 , move all of the voices smoothly while avoiding objectionable parallels and employing proper doublings.

29.5 Practice Exercises

Day One

1. Analyze the figured bass to provide Roman numerals in the blanks below the staff, then voice lead the progression. Include the key signature.

2. Voice lead the following Roman numeral progression. Include the key signature. Add the following non-chord tones: 1 suspension, 1 passing tone, 1 anticipation, and 3 neighbor tones.

Day Two

3. Analyze the figured bass to provide Roman numerals in the blanks below the staff, then voice lead the progressions in chorale style. Include the key signatures. Include one suspension in each measure.

Chapter 30

Introduction to Counterpoint

30.1 Species Counterpoint

The seminal composition text, *Gradus ad Parnassum* (1725), by Johann Joseph Fux, teaches contrapuntal composition through “species counterpoint.” **Species counterpoint** uses simple rhythmic values and teaches composers how to write one, two, three, or four notes against a larger value, usually a whole note. In this text, we will focus on writing for two voices. In a semester-long college course in counterpoint, one typically learns to write for up to four voices.

Counterpoint can be thought of as the simultaneous sounding of two or more melodic lines. An example is shown below.

YT: YGHj2CmNz0E

Figure 30.1.1 Bach, J.S., *Well-Tempered Clavier, Book I*, Fugue 3 in C-sharp major, BWV 848

Textures made of counterpoint are called “contrapuntal” and can be contrasted with melody-accompaniment textures, which are called “homophonic.”

30.2 First Species Counterpoint

In first species, we will write note-against-note counterpoint in whole notes. You will be given a melody, called the *cantus firmus* (abbreviated “*c.f.*”), against which you will write a counterpoint.

**Figure 30.2.1**

Fux enumerates several rules to follow to write in proper sixteenth-century style (the style of Palestrina). Since this is a brief introduction to writing in species counterpoint, the rules below are slightly modified and simplified. You would likely follow stricter rules in a semester-long course in counterpoint.

1. Begin with an octave or unison.

Intervallic distance from cantus firmus to counterpoint:

2. End on an octave or unison.
3. Approach the ending octave or unison by contrary motion; one of the parts will end with $\hat{7} - \hat{8}$ while the other ends with $\hat{2} - \hat{1}$.

Intervallic distance from cantus firmus to counterpoint:

- (a) If the example is in G mixolydian, D dorian, or A aeolian, use a sharp to create the leading tone (F#, C#, and G# respectively).

Use a sharp to create the leading tone at the final cadence

4. Create consonant harmonic intervals in each measure (unisons, 3rds, 5ths, 6ths, and their compound versions—10ths, 12ths, 13ths, etc.). Dissonances (2nds, 4ths, 7ths) are not allowed in first species counterpoint.

- (a) “Imperfect” consonances (3rds and 6ths) can be approached in any manner
 - i. Do not use more than three consecutive 3rds or 6ths
 - (b) “Perfect” consonances (unisons, 5ths, 8ves, 12ths) may only be approached in *contrary* motion in order to avoid direct 5ths and direct 8ves (you may wish to review the [Types of Motion](#)).
5. Only the following leaps are allowed: 3rds, 4ths, 5ths, ascending minor sixths, and 8ves (review the [Rules of Melody](#) with regard to direction changes after leaps).
 6. Avoid melodically outlining a tritone by changing directions at two turning points in a melody.

7. Avoid repeating notes in order to create a flowing melody

Following these rules may seem dry and uninspired, but these rules come from observations of note-by-note details in Renaissance masterpieces by composers like Palestrina and can make any composer better and more aware of what they are writing.

[Go to First Species Practice Exercises.](#)

30.3 Second Species Counterpoint

In second species, one writes two half notes against a *cantus firmus* in whole notes. (Second species can also include writing three half notes against a *cantus firmus* of dotted whole notes in $\frac{3}{2}$.) The rules are generally the same as first species except that one simple dissonance is allowed in second species: the passing tone. Please see the details below.

1. Begin your counterpoint with a half note at the octave or unison on either the first or third beat of the measure; if starting on the third beat, put a half rest at the beginning of the measure.

Intervallic distance from cantus firmus to counterpoint:

2. End with a whole note on an octave or unison, using one of these concluding formulas:

- If the *cantus firmus* is in the lower part, approach the final octave with intervals of a fifth and sixth ($\hat{6} - \hat{7}$ against $\hat{2}$ in the *cantus firmus*).
- If the *cantus firmus* is in the upper part, approach the final octave or unison with the intervals of a fifth and third ($\hat{5} - \hat{7}$ against $\hat{2}$ in the *cantus firmus*).
- Phrygian mode has an exception: if the *cantus firmus* is in the upper part, approach the final octave or unison with the intervals of a sixth to a third ($\hat{4} \rightarrow \hat{7}$ against $\flat\hat{2}$ in the *cantus firmus*).

Concluding formulas:

- Of the two half notes you write in each measure, the first must always be a consonance (unison, 3rd, 5th, 6th, 8ve, or compound interval equivalent). If the second is a dissonance, it can only be a passing tone (approached and left by step). Otherwise, the second note must be a consonance. The only allowable leaps are the same as in first species.
- When crossing barlines, apply the following:
 - “Imperfect” consonances (3rds and 6ths) can be approached in any manner.
 - “Perfect” consonances (unisons, 5ths, 8ves, 12ths) may only be approached in contrary motion in order to avoid direct 5ths and direct 8ves.
 - Do not repeat notes across barlines
- Avoid 8ves on consecutive downbeats and avoid 5ths on consecutive downbeats *unless* there is the leap of 4th occurring after the 8ve or 5th on the downbeat

Notice that dissonant interval numbers (2, 4, tt, 7) are circled to highlight that they must be handled in a special manner.

[Go to Second Species Practice Exercises.](#)

30.4 Third Species Counterpoint

In third species, one writes four quarter notes to each whole note in the cantus firmus. Use the following rules.

1. Begin on an octave or unison. Write four quarter notes to each whole note in the cantus firmus except for the final measure.
2. End on a whole note on an octave or unison with the penultimate measure using one of the following formulas:
 - (a) If the cantus firmus is in the lower voice, the penultimate measure of the upper voice can be:
 - i. $\hat{4} - \hat{5} - \hat{6} - \hat{7}$, or
 - ii. $\hat{2} - \hat{1} - \hat{6} - \hat{7}$ (the *cambiata*—see 5.b. below)
 - (b) If the *cantus firmus* is in the upper part, the penultimate measure of the lower voice is $\hat{7} - \hat{5} - \hat{6} - \hat{7}$.

Concluding formulas:

3. Each downbeat should be a consonance.
4. When crossing barlines, apply the following:

- (a) “Imperfect” consonances (3rds and 6ths) can be approached in any manner.
 - (b) “Perfect” consonances (unisons, 5ths, 8ves, 12ths) may only be approached in contrary motion in order to avoid direct 5ths and direct 8ves.
 - (c) Do not repeat notes across barlines
5. Allowable dissonances:
- (a) Passing tones are allowable dissonances (but never on the first beat of the measure).
 - (b) The *cambiata* (see the melodic contour in third measure of the example below) is allowed but only with the second note of the measure as the only dissonant interval.
6. Direct 5ths and direct 8ves are not allowed and occur when an 8ve or 5th on a downbeat is approached through similar motion.

[Go to Third Species Practice Exercises.](#)

30.5 Fourth Species Counterpoint

Fourth species deals with writing suspensions (and syncopations). Because this is only a brief introduction to species counterpoint, you will only encounter the cantus firmus in the lower voice in fourth species in this text. See the fourth species rules below.

1. Start with a half rest, then write a half note an 8ve above the *cantus firmus*. The half note on the 3rd beat of every measure but the penultimate one ties across the barline to a half note on the first beat of the succeeding measure.
2. End on a whole note at the interval of an 8ve above the *cantus firmus*.
3. The penultimate measure should contain a 7-6 suspension.
4. The half note on the third beat of each measure is *always* a consonance.
5. If the half note after a tie is a dissonance (4th or 7th), it is a suspension and *must resolve down by step*.
 - (a) Allowable suspensions in the upper part are 4-3 and 7-6; 9-8 and 2-1 are not allowed.
6. If the half note after the tie is a consonance (1, 3, 5, 6, 8), it is a syncopation and can be left in any manner (by step or leap in any direction).

Notice that all suspensions and syncopations are labeled and all dissonant intervals are circled.

[Go to Fourth Species Practice Exercises.](#)

30.6 Fifth Species Counterpoint

Fifth species (also known as “florid counterpoint”) is a free mixture of first through fourth species. One can observe all species in the opening of Orlando de Lasso’s *Expectatio Justorum*.

3 5 3 3(4) 5 6 5 3 8 5(4) 3 3 3(2) 5(4) 3(2)

YT: wjqd3Mv_wgs

Figure 30.6.1 Orlando de Lasso, *Expectatio Justorum*

30.7 Invention Expositions

J.S. Bach’s Two-Part Inventions were not only intended as instructional keyboard pieces but also as examples of how to compose. In this section we will wed our species counterpoint knowledge with our knowledge of harmony in order to write a four-measure invention exposition using Bach’s C major and E minor inventions as models. Note the I–I–V–V–I harmonic progression.

C: I I V V I

YT: E8EvUmq0Zao

Figure 30.7.1 Bach, Invention No. 1 in C Major, BWV 772

e: i i V V i

YT: QHDx0uYaKkY

Figure 30.7.2 Bach, Invention No. 7 in E Minor, BWV 778

30.7.1 How to Write an Invention Exposition

In the majority of examples, you will be given an invention theme in the first measure, which you will write an octave lower in the bass part in the second measure, then a perfect fifth higher than the first measure in the third measure, the fourth measure will be the third measure transposed down one octave, and, finally, you will end on the interval of a 10th—tonic in the bass part and $\hat{3}$ in the upper part. Please see the example below.

Theme altered to end on tonic

end on a 10th

Theme 8ve lower than m. 3

Theme P5 higher

Theme 8ve lower

Theme

Eb: I I V V I

Figure 30.7.3

30.7.2 Altering Themes to Fit the Harmonies

1. You may find that a theme that leads naturally from I to V needs its contour altered *when progressing from V to I in measures 4 to 5* in order to emphasize the V chord and the dominant-to-tonic harmonic motion. Modify the contour to emphasize the V chord at the end of the measure, altering as few notes as possible.

leads naturally to $\hat{5}$

does not emphasize V chord

note changed to emphasize V chord

2. Additionally, you may be given themes that land on $\hat{3}$ on the downbeat of the second measure, not the $\hat{5}$ that occurred in the Bach C major and E minor invention expositions. You will need to alter the theme at the end of measure 2 to emphasize the I chord as well as make the first bass note of the third measure the $\hat{5}$ scale degree.

Bb: I I V V I

does not emphasize I

does not emphasize V

Theme altered to end on tonic

notes changed to emphasize harmonies

Bb: I I V V I

3. Finally, when a theme in minor containing the $\hat{2}$ and $\hat{3}$ scale degrees in the first two measures is transposed up a fifth in the succeeding two measures, scale degrees $\hat{2}$ and $\flat\hat{3}$ will be transposed to $\sharp\hat{6}$ and $\sharp\hat{7}$. The reasoning is that $\sharp\hat{7}$ is the 3rd of the V chord, and $\sharp\hat{6}$ is a step below, typically a passing tone. Another way to think of this is to use the *melodic minor scale in the 3rd and 4th measures*.

Interval numbers: 3 2 3 1 7 6 1 7

Chord symbols: d: i i V V i

30.7.3 Adding Counterpoint to the Theme Statements

After copying and transposing the theme throughout this four-measure invention exposition, you will need to add counterpoint to accompany the statements of the theme in the second, third, and fourth measures. Unlike species counterpoint, your counterpoint in these invention expositions *must emphasize the harmony* in each measure.

not emphasizing D-F-A

not emphasizing A-C[#]-E

Intervals: 5 8 5 6 6 7 5 3 8 3 5 8 tt 6 6 7 6 3 3

Chord symbols: d: i i VI⁶? V V III⁶? i

strong beats emphasize the harmony

Intervals: 5 3 4 3 4 3 6 8 3 5 3 4 3 4 3 3 3

Chord symbols: d: i i V V i

You may find the need to create “microharmonies” within a measure with some themes, such as a I–IV–I or I–vii^{o6}–I progression even though the overriding harmony of the bar is the I chord. Examples are found in the first two measures of the C major invention.

C: I I (vii^{°6}) I V V (IV^{°6}) V I

“microharmonies”

YT: E8EvUmq0Zao

Figure 30.7.4 Microharmonies in the C Major Invention by J.S. Bach

Given these pieces of information, you are prepared to begin writing tonal counterpoint in two parts.

[Go to the Invention Exposition Practice Exercises.](#)

30.8 Fugue Analysis

We will now turn to analysis of fugue. Let us set out definitions first.

- A **fugue** is a contrapuntal composition whose form features sections called expositions and episodes
- A fugue **exposition** is a section that contains at least one full statement of the subject of the fugue.
- The fugue **subject** is the primary melodic idea and is stated by each voice in turn in the first exposition.
- The **response**, called “answer” in some texts, is the subject intervallically altered to start in the original key before modulating to the dominant. Notice that the third note of the subject in the example below descends a perfect fourth to the fourth note. In the response in measure 3, the third note descends a perfect fifth to the fourth note.
- An **episode** is a section that does not contain a full statement of the fugue subject, but instead [develops](#) the subject or other prominent ideas through fragmentation and sequencing.

Here is the first exposition of Fugue 2 in C minor in Book I of the J.S. Bach’s *Well-Tempered Clavier*. In the first exposition of a fugue, all of the voices state the subject at least once. It is important to note that a response is considered equivalent to a subject because the intervallic alterations are so minute.

EXPOSITION

SUBJECT

RESPONSE

COUNTERSUBJECT 1

BRIDGE (can only occur within first exposition)

YT: itvGdURMfbM

Figure 30.8.1 First Exposition of Fugue 2 in C minor from *WellTempered Clavier*, Book I (BWV 847)

- The **bridge**, if it occurs, is a brief modulatory passage that only happens *within* the first exposition, usually to connect the response to the subsequent subject statement.
- A **countersubject** is counterpoint that consistently accompanies each occurrence of the subject. “Countersubject 1” is in the alto voice in measure 3 and in the soprano voice in measure 7. The alternative to using a countersubject would be for a composer to write different accompanying counterpoint (labeled as “CTRPT” in the examples) each time a subject is stated.

Within the bridge (bar 5 in the example above), we see motivic **fragmentation** of the subject (“subject head”). Subjects, responses, and countersubjects can be fragmented into head motives and tail motives in episodes in fugues. In this fugue, we will see the subject, countersubject 1, and countersubject 2 fragmented.

Below is the first episode, which contains motivic fragmentation of the subject and countersubject 1.

In homework and on the test, you will be asked to analyze a fugue with regard to expositions (including the bridge, if it occurs), episodes, subjects, responses, countersubjects, and motivic fragmentation.

30.9 Practice Exercises

Species Counterpoint: Day One

First and Second Species Exercises

1. For each exercise below, write first species (note-against-note) counterpoint. Write the intervallic distance from the cantus firmus (“*c.f.*”) to the counterpoint in the blanks above the staff. Remember to begin and end with an octave or unison, to proceed to the last unison by step in both voices, and use only consonances (1, 3, 5, 6, 8, 10).

Interval: — — — — — — —

Interval: — — — — — — —

Int: — — — — — — —

Int: — — — — — — —

2. For the exercises below, write second species counterpoint—two half notes in each measure except the last. Each downbeat must be a consonance. The only dissonance allowed is the passing tone. Write the intervallic distance from the *cantus firmus* (“*c.f.*”) to the counterpoint in the blanks above the staff. Circle all dissonant numbers (2, 4, and 7) and label passing tones with “pt.”

Chapter 31

Introduction to Jazz Theory

This introduction to jazz theory focuses on the types of chords encountered in jazz, how these chords might be voiced, how to voice lead these chords in five-part harmony, and scales associated with these chords.

31.1 Jazz Chord Basics

1. **Ninth chords** are common in jazz.

- (a) i. The \circ^7 chord is also labeled as $m^7(\flat 5)$ in jazz— $C^{\circ 7}$ is the same as $Cm^7(\flat 5)$.
- (b) In lead-sheet notation, *adding “9” to a chord symbol means the 7th is also present.*
- (c) “9” is “2” an octave higher and always comes from the major scale unless otherwise specified.

2. Alterations (maj, Δ , \sharp , \flat , +, m, -) are applied as follows:

- (a) “maj” or “ Δ ” with 7, 9, 11, or 13 refers to the 7th of the chord being major, not the 9th, 11th, or 13th.
- (b) Lowercase “m” or the minus sign (“-”) means minor and applies to the 3rd of the chord.
 - i. The minus sign (-) is equivalent to a flat when placed in front of 9, 11, or 13 (i.e., $\flat 9$ and -9 mean the same thing). “ $C^{\sharp}-6$ ” (equivalent to “ $C^{\sharp}m^6$ ”) means a C^{\sharp} minor chord (“ $C^{\sharp}-$ ”) with the 6th from major (A^{\sharp}). “ C^{\sharp} (add -6),” which is equivalent to “ C^{\sharp} (add $\flat 6$),” means a C^{\sharp} major triad with the $\flat 6$ added
- (c) The plus sign (+) can mean “augmented triad” or is equivalent to a sharp when placed in front of 9, 11, or 13. $C+7$ means a C augmented triad (“ $C+$ ”) with a dominant seventh (“7”), not a C major triad with a major 7th.
- (d) Chromatically altered chord numbers (affecting 6, 9, 11, 13) are usually set apart by parentheses so as to clearly designate whether

the minus, plus, or sharp, or flat is affecting the chord or the added note. For example, consider $C\flat 9$ versus $C(\flat 9)$ versus $C7(\flat 9)$.

3. If a chord has a 9th but no 7th, use the term “add 9.” In popular music, sometimes “2” or “add 2” is used instead (refer to the [Chord Labels](#) section).
4. $m\Delta 7$ Chord: In addition to the five common seventh chord types, jazz includes use of the minor-major seventh chord (a minor triad with a major seventh). This chord will commonly have a ninth added as well. You will see the “major” symbol (Δ) used primarily in jazz. Popular music typically uses “maj” instead.

5. **11th** and **13th** Chords: 11ths and 13ths always come from the major scale unless otherwise specified. (“11” is “4” an octave higher and “13” is “6” an octave higher.)
 - (a) All numbers up to the highest number are assumed. $C9$ means that the 7th is also included below the 9th. $C13$ means $C-E-G-B\flat-D-F-A$ —everything up to the 13th. For this reason, we will use $C9(13)$ —to specify $C-E-G-B\flat-D-A$ —instead of $C13$, which would be used in the real world to describe these notes. In the real world, a composer or arranger writing $C13$ will assume the pianist or guitarist knows to omit the unaltered 11th because it clashes with the major 3rd of the chord. In this music theory course we will be specific as to which notes are included and left out.

6. $\frac{6}{9}$ chords: If a chord has a 6th and a 9th, call it a $\frac{6}{9}$ chord ($C\frac{6}{9}$) instead of a $\frac{9}{6}$ chord. The major $\frac{6}{9}$ uses the major third ($C-E-G-A-D$) while the minor $\frac{6}{9}$ uses the minor third ($C-E\flat-G-A-D$). The “6” always comes from the major scale unless otherwise specified. (Refer to the [Chord Labels](#) section for examples.)
7. Enharmonic respelling: Jazz musicians will sometimes respell double-flatted notes and double-sharped notes enharmonically because for some musicians theory was viewed more from the aspect of the piano than the staff. This may at times include enharmonically respelling notes like $B\sharp$, $C\flat$, $E\sharp$, and $F\flat$ (although these notes sometimes will be used).

8. For the purposes of this text, we will assume the bass note is the root when analyzing chords. While slash chords (E/C, for example) are used in jazz, this chapter is meant as an introduction to the fundamentals of jazz harmony and therefore will not include the use of slash chords.

31.2 Chord Symbol Specifics

1. “6” versus “13” rule: label the 6th of a chord “6” only if the 7th is not present; if the 7th is present, label the 6th as “13”
2. “11” versus “sus” (“sus” means “4”): label the 4th of a chord “sus” only if the 3rd is not present; if the 3rd is present, label the 4th an “11” (C7sus has C–F–G–B \flat). (There is an exception to this in more advanced jazz theory, which is not within the purview of this text.)
3. \flat 5 versus \sharp 11: If the chord has a normal 5th (C–E–G–B \flat –F \sharp), call the F \sharp a “ \sharp 11” (because you won’t have a chord with a regular and altered 5th at the same time). Otherwise, you can call the F \sharp of C–E–B \flat –F \sharp a “ \sharp 11” or a “ \flat 5.”

31.3 Altered Dominant Seventh Chords

Typically, a dominant seventh chord is considered **altered** if either or both the 5th or 9th are chromatically raised or lowered. (“G7alt” might mean a G7 with both an altered 5th and 9th, but is vague in that it doesn’t specify how the 5th and 9th are chromatically altered.)

1. Root, 3rd, and 7th of dominant seventh chord remain unchanged.
2. 5th may be raised or lowered (\sharp 5 or \flat 5, which can also be written with pluses and minuses as +5 or –5) and can be respelled enharmonically (the \sharp 5 of a C7 \sharp 5 could be written as an A \flat instead of G \sharp) for ease of reading because the chromatic spelling agrees with B \flat (the 7th of the chord)—it is easier to read a chord where the accidentals agree (all sharps or all flats).
3. 9th may be raised or lowered (\sharp 9 or \flat 9, which can also be written in the lead-sheet symbol as +9 or –9). The \sharp 9 is often spelled enharmonically on the staff as \flat 10 for ease of reading; therefore, a dominant seventh chord with a \sharp 9 will appear to have both a major and minor 3rd (C–E–G–B \flat –E \flat). You may be tempted to call such a chord a minor chord with a \flat 11, but \flat 11 is not used because it is the major third of a chord.

4. Both alterations of 5 and 9 may occur simultaneously ($\pm 9/\pm 5$).
5. $\flat 13$ is the enharmonic equivalent of the $\sharp 5$. In this text, $\sharp 5$ is preferred to $\flat 13$, but you will see both on lead sheets. Also, $\flat 13$ implies that the unaltered 5th occurs in the chord, while $\sharp 5$ does not.

2. $C7(\flat 5)$ $C7(\sharp 5)$ respell $\sharp 5$ to agree with $\flat 7$

3. $C7(\flat 9)$ $C7(\sharp 9)$ respell $\sharp 9$ to agree with $\flat 7$

4. $C7^{\pm 9}_{\pm 5}$ $\flat 5$ $\flat 9$ $\sharp 9$ respell $\sharp 9$ to $\flat 5$

5. $C7(\flat 13)$ or $C7(\sharp 5)$ preferred

If you are composing or arranging and want to know when to use altered chords, know that dominant sevenths are usually altered (with altered 5th or 9th or both) when they have dominant function (i.e., when the root is going to resolve down by a fifth). Dominant sevenths are often unaltered when they have tonic function, i.e., the first chord in a blues.

31.4 Chord Labels

The following list of chords is edited and condensed from *The New Real Book* (Vol. 1), published by Sher Music Co.

$C6$ $Cm6$ $C(\text{add } 9)$ $Cm(\text{add } 9)$ C^9 Cm^9

Figure 31.4.1 Triads with added notes

$C7$ $C9$ $C9(\sharp 11)$ $C9(13)$ $C13(\sharp 11)$

Figure 31.4.2 Dominant seventh chords

$C\Delta 7$ $C\Delta 9$ $C\Delta 9(\sharp 11)$ $C\Delta 13(\sharp 11)$ $C\Delta 7(\sharp 5)$ $C\Delta 7(\flat 5)$

Figure 31.4.3 Major seventh chords

$Cm7$ $Cm9$ $Cm11$ $Cm7(11)$ $Cm13$ $Cm13(\sharp 11)$

Figure 31.4.4 Minor seventh chords

Figure 31.4.5 Half-diminished seventh chords

Figure 31.4.6 Sus chords

Figure 31.4.7 Altered chords

Figure 31.4.8 Other chords

One finds that almost any combination of triad or seventh chord plus any alteration or combination of alterations is possible.

31.5 How to Write Jazz Chords

To write a jazz chord after being given a lead-sheet symbol, begin with all of the major notes up to the 13th.

Let's work through this with the following label: Dm Δ 11.

Dm means D–F–A. The Δ 11 means there is a major 7th, regular 9th, and regular 11th, not that there is a major 11th. Remember, D11 would mean a D7 chord with the 9 and 11 (all chord members up to the 11th—D, F \sharp , A, C, E, G). DΔ 11 would mean a DΔ 7 chord with all members up to the 11 (D, F \sharp , A, C \sharp , E, G).

Let's try this with another chord: E7 $\left(\begin{smallmatrix} \#11 \\ \#9 \\ \#5 \end{smallmatrix} \right)$.

E7 means we have E–G \sharp –B–D. When we look at the altered notes, we see $\#5$, so we add a B \sharp , then change it to a C \sharp because that agrees chromatically with the 7th, D. When we add $\#9$, we add F \times , which looks overly complicated, so we enharmonically respell it as G \sharp , which agrees chromatically with the D (7th) and C ($\#5$). The $\#11$ can be an A \sharp , an augmented 2nd above the G (the

$\sharp 9$), or we can respell it as a $B\flat$. Both $A\sharp$ and $B\flat$ are acceptable, although the upper notes of $D-G-B\flat$ form a G minor triad and therefore are easy to sightread.

#11
#9
#5
E7

#11 spelled as $B\flat$; $A\sharp$ is also acceptable
#9 respelled as $\flat 10$ on staff
#5 respelled as $\flat 6$ on staff
E7 is E-G \sharp -B-D

31.6 How to Analyze Jazz Chords

To analyze a jazz chord, on scratch paper write out all the *major* chord members up to the 13th. These include the major 3rd, perfect 5th, major 7th, major 9th, perfect 11th, and major 13th.

major 13th
perfect 11th
major 9th
major 7th
perfect 5th
major 3rd
root

In order to analyze the following chord, determine the following:

1. The quality of the 7th chord
2. The upper structure (9, 11, and 13)
3. Any alterations to any of the chord members
4. If any of the notes are enharmonically respelled

Work through each step (see the example below). Compare this chord to the scratch paper version with all the major notes up to the 13th. We have an $E\flat$ dominant 7th chord. The $G\flat$ can't be the minor third because we already have a $G\sharp$. If we consider the $G\flat$ enharmonically as an $F\sharp$, we see we have a $\sharp 9$, which we noted earlier is often spelled as $\flat 10$ so as to agree chromatically with the $\flat 7$. The A is the 11th, but it is an $A\sharp$, so it is a $\sharp 11$. It is not $\flat 5$ because we would not have both a perfect 5th and altered 5th in the same chord. There is no C in the chord, so there isn't a 13th.

no 13th
raised 11th
♭10 = ♯9
lowered 7th
perfect 5th
major 3rd
root

The final label is $E\flat 7 (\sharp^{11}_{\flat 9})$.
Let's try another chord.

Again, work through each step. First, write all the major notes up to the 13th.

major 13th
perfect 11th
major 9th
major 7th
perfect 5th
major 3rd
root

Compare the “all major and perfect” 13th chord above to the chord to be solved.

perfect 11th with no 3rd = "sus"
lowered 9th
lowered 7th
major 6th is "13" when 7th is present
no 5th (incomplete voicing is normal)
no 3rd
root

We notice we don't have an A, and we remember that we might have a sus chord where the 4 (or sus4) substitutes for the 3rd. We see we have a B♭, which confirms this. We also do not see a C, but we remember that it is common to omit the 5th in a chord (see [Incomplete Chords](#)). Therefore we have F–B♭–E♭, making an F7sus chord. When we examine for upper structure notes (the 9, 11, and 13), we find a G♭ (the ♭9 of the chord) and a D (the 13). Remember, the B♭ is the sus (the 4th), not the 11th, because we have no 3rd (see [11 versus Sus](#)).

The final label is F13sus(♭9).

“F13” means we have root, 3rd, 5th, ♭7th, 9th, 11th, and 13th. “Sus” is a modifier that means we have the 4th, which eliminates the 3rd as well as the 11th because “sus” and 11 refer the same note (B♭). “♭9” means the 9th is lowered chromatically.

31.7 Jazz Chord Voicings

In this section we will define guide tones and learn about two types of jazz chord voicings.

31.7.1 Guide Tones

Guide Tones are the 3rd and 7th of a chord. In any circle of fifths progressions (including ii–V–I and iii–vi–ii–V) the guide tones move by step.

The diagram shows a circle of fifths progression in F major. The chords and their guide tones (3rd and 7th) are: F: ii⁷ (Gm7), V⁷ (C7), I^{M7} (Fmaj7), F: iii⁷ (Am7), vi⁷ (Dm7), ii⁷ (Gm7), V⁷ (C7), and I^{M7} (Fmaj7). The 3rd and 7th of each chord are indicated by boxes and labeled '3rd' and '7th'. The bass line shows the root notes of each chord, and the right hand shows the guide tones. The guide tones move by step between adjacent chords.

Play through the entire circle of fifths with dominant 7th chords (C7–F7–B^b7, etc.) with the bass note in the left hand and the guide tones (3rd and 7th) in the right hand and observe how the 3rd and 7th are the same for bass notes a tritone from each other.

The diagram shows a sequence of dominant 7th chords: C7, F7, B^b7, E^b7, A^b7, D^b7, G^b7, B7, E7, A7, D7, and G7. The 3rd and 7th of each chord are indicated by boxes. A curved arrow labeled '3rd and 7th are enharmonically equivalent' points from the 3rd of one chord to the 7th of the next chord, which is a tritone away. Another curved arrow labeled 'tritone' points from the bass note of one chord to the bass note of the next chord, which is also a tritone away.

Also, you can play through the circle of fifths alternating between 7(13) chords and 7(#9) chords—C7(13)–F7(#9)–B^b7(13)–E^b7(#9)—with the right hand descending chromatically. This can be repeated with all of the bass notes a tritone away (starting on F[#] in the left hand) and the qualities are exchanged for all the chords.

The diagram shows a sequence of 7(13) and 7(#9) chords: C7(13), F7(#9), B^b7(13), E^b7(#9), A^b7(13), D^b7(#9), G^b7(13), B7(#9), E7(13), A7(#9), D7(13), and G7(#9). The 3rd and 7th of each chord are indicated by boxes. The right hand descends chromatically through the guide tones of the chords.

31.7.2 Jazz Chord Voicings

In this section we will examine two categories of voicings.

1. The first category (“spread” voicings) has 5-note chords with the root, 3rd, and 7th as the lowest notes with other chord members voiced above, often in the interval of a fourth or fifth. (The root will always be the lowest note, while the 3rd can be voiced above or below the 7th).

Figure 31.8.2 The II-V-I Progression in Minor

31.8.2 III-VI-II-V

The iii-vi-ii-V progression is called a **turnaround** because it replaces the static harmony of the I chord in the last two measures of a tune with harmonic motion that leads to the I chord that will occur upon repetition to the top of the form. This also applies to the I-VI-II-V progression.

One can modify a iii-vi-ii-V turnaround so all four chords are dominant seventh chords: $\text{III}^7\text{-VI}^7\text{-II}^7\text{-V}^7$ (or $\text{V}^7/\text{vi-V}^7/\text{ii-V}^7/\text{V-V}^7\text{-E}^7\text{-A}^7\text{-D}^7\text{-G}^7$ in lead sheet symbols). Turnarounds made solely of dominant seventh chords can then employ tritone substitutions (substituting a dominant seventh chord a tritone away because they have the same guide tones). For example, $\text{E}^7\text{-A}^7\text{-D}^7\text{-G}^7$ becomes $\text{E}^7\text{-E}^\flat 7\text{-D}^7\text{-D}^\flat 7$.

Figure 31.8.3 The III-VI-II-V Progression in Major and shown with Tritone Substitutions

Because of tritone substitutions, the $\flat\text{II}^7$ chord can be substituted for V^7 . In C, $\text{D}^\flat 9(13)$ is often substituted for $\text{G}^7(\sharp 9)$.

Figure 31.8.4 The $\flat\text{II}^7$ substituting for V^7 in a Tritone Substitution

31.8.3 The Blues Progression

Below are two choruses of a common jazz version of the [blues progression](#). The first chorus uses the first category of voicings (“spread” voicings) while the

second chorus uses the second category (“close” voicings with the 3rd or 7th as the lowest note).

Notice that the voicings for the $A^7(\sharp 9)$ and $E^b9(13)$ are identical (not counting the roots) because the $E^b9(13)$ is a tritone substitution for the $A^7(\sharp 9)$. The same is true for the $G^7(\sharp 9)$ and the $D^b9(13)$. The Roman numerals below the staves are simplified.

Chord voicings and Roman numerals for the first two phrases:

- Phrase 1: C^6 , $F9(13)$, $C9(13)$, $C7^{\sharp 9}$
- Phrase 2: $F9(13)$, $F13sus$, $F9(13)$
- Roman numerals: $C: I^6_9$, IV^7 , I^7 , $I^{7alt.}$, IV^7 , IV^7

Chord voicings and Roman numerals for the third phrase:

- Phrase 3: $C9(13)$, $A7^{\sharp 9}$, $Dm9$, $G7^{\sharp 9}$, $C9(13) E^b9(13)$, $D9(13) D^b9(13)$
- Roman numerals: I^7 , VI^7 , ii^7 , $V^{7alt.}$, I^7 , $bIII^7$, II^7 , bII^7

Chord voicings and Roman numerals for the first two phrases (second example):

- Phrase 1: C^6 , $F9(13)$, $C9(13)$, $C7^{\sharp 9}$
- Phrase 2: $F9(13)$, $F13sus$, $F9(13)$
- Roman numerals: $C: I^6_9$, IV^7 , I^7 , $I^{7alt.}$, IV^7 , IV^7

Chord voicings and Roman numerals for the third phrase (second example):

- Phrase 3: $C9(13)$, $A7^{\sharp 9}$, $Dm9$, $G7^{\sharp 9}$, $C9(13) E^b9(13)$, $D9(13) D^b9(13)$
- Roman numerals: I^7 , VI^7 , ii^7 , $V^{7alt.}$, I^7 , $bIII^7$, II^7 , bII^7

Notice that the voice leading is very smooth for each part with the exception of the bass line. All voices move by step or by 3rd.

31.9 Scales

In this section on scales, our primary concern will be understanding how scales relate to corresponding chords in order to allow one to improvise a jazz solo. Similarly, understanding chord-scale relationships can allow one to write

chordal solos (like a sax soli or shout chorus in a jazz ensemble piece) where non-chord tones come from the corresponding scale.

31.9.1 The Blues Scale

The **blues scale** is identical to the minor pentatonic scale ($\hat{1} \rightarrow \flat\hat{3} \rightarrow \hat{4} \rightarrow \hat{5} \rightarrow \flat\hat{7}$) except with an added $\flat\hat{5} / \sharp\hat{4}$ ($\hat{1} \rightarrow \flat\hat{3} \rightarrow \hat{4} \rightarrow \flat\hat{5} \rightarrow \hat{5} \rightarrow \flat\hat{7}$).

Figure 31.9.1 The Blues Scale (Descending)

A well-known example of the blues scale occurs in “Sunshine of Your Love” by Cream.

YT: f3y8jff01UY8

Figure 31.9.2 Jack Bruce and Eric Clapton, “Sunshine of Your Love”

In the blues scale, the $\flat\hat{5}$ and $\flat\hat{3}$ are considered to be “blue notes” because they are not chord tones (of a major triad or dominant 7th chord). Blue notes are commonly used in jazz and popular music.

In terms of using the blues scale as a soloist, you will find that some players use the blues scale over any and every chord, and that listeners’ ears often find this acceptable.

31.9.2 The Bebop Scale

The bebop scale (known more specifically as the “**bebop dominant**” scale in jazz theory texts) is identical to the [Mixolydian scale](#) except it has an added $\sharp\hat{7}$. The added chromatic note ($\sharp\hat{7}$) occurs in descending passages (from $\hat{8} \rightarrow \flat\hat{7}$) as a chromatic passing tone. The bebop scale is most often used over the dominant 7th chord. In the most rudimentary form of improvising, one can use the bebop scale in descending eighth notes beginning on the downbeat of a measure, starting on the root, 3rd, 5th, or 7th.

Figure 31.9.3 Descending C Bebop Scale starting on Root, then 3rd, then 5th, then 7th

31.9.3 Table of Scales

The scales below are represented by scale degrees. Synthetic scales like whole tone, diminished, and diminished-whole tone have many acceptable enharmonic respellings.

Table 31.9.4 Table of Scales

CLASSICAL SCALES	MODES AND HYBRID MODES	JAZZ AND SYNTHETIC
Major (“ Ionian ”) $\hat{1} \hat{2} \hat{3} \hat{4} \hat{5} \hat{6} \hat{7}$	Mixolydian $\hat{1} \hat{2} \hat{3} \hat{4} \hat{5} \hat{6} \rightarrow \hat{7}$	Blues $\hat{1} \rightarrow \hat{3} \hat{4} \rightarrow \hat{5} \hat{5} \rightarrow \hat{7}$
Natural Minor (“ Aeolian ”) $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \rightarrow \hat{6} \rightarrow \hat{7}$	Lydian $\hat{1} \hat{2} \hat{3} \# \hat{4} \hat{5} \hat{6} \hat{7}$	Bebop Dominant $\hat{1} \hat{2} \hat{3} \hat{4} \hat{5} \hat{6} \rightarrow \hat{7} \rightarrow \hat{7}$
Harmonic Minor $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \rightarrow \hat{6} \hat{7}$	Dorian $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \hat{6} \rightarrow \hat{7}$	Bebop Major $\hat{1} \hat{2} \hat{3} \hat{4} \hat{5} \# \hat{5} \hat{6} \hat{7}$
Melodic Minor $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \hat{6} \hat{7}$	Phrygian $\hat{1} \rightarrow \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \rightarrow \hat{6} \rightarrow \hat{7}$	Whole Tone $\hat{1} \hat{2} \hat{3} \# \hat{4} \# \hat{5} \rightarrow \hat{7}$
	Locrian $\hat{1} \rightarrow \hat{2} \rightarrow \hat{3} \hat{4} \rightarrow \hat{5} \hat{6} \rightarrow \hat{7}$	Octatonic (Half-Whole) (“ Diminished ” scale) $\hat{1} \rightarrow \hat{2} \rightarrow \hat{3} \hat{3} \# \hat{4} \hat{5} \hat{6} \rightarrow \hat{7}$
	Locrian #2 (6th mode Melodic Minor) $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \rightarrow \hat{5} \hat{6} \rightarrow \hat{7}$	Octatonic (Whole-Half) (“ Diminished ” scale) $\hat{1} \hat{2} \rightarrow \hat{3} \hat{4} \# \hat{4} \# \hat{5} \hat{6} \hat{7}$
	Lydian-Dominant (4th mode Melodic Minor) $\hat{1} \hat{2} \hat{3} \# \hat{4} \hat{5} \hat{6} \rightarrow \hat{7}$	Diminished-Whole Tone (also “ Altered ” scale or 7th mode Melodic Minor) $\hat{1} \rightarrow \hat{2} \rightarrow \hat{3} \hat{4} \rightarrow \hat{5} \hat{6} \rightarrow \hat{7}$
	Phrygian-Dorian (2nd mode Melodic Minor) $\hat{1} \rightarrow \hat{2} \rightarrow \hat{3} \hat{4} \hat{5} \hat{6} \rightarrow \hat{7}$	
	Lydian-Augmented (3rd mode Melodic Minor) $\hat{1} \hat{2} \hat{3} \# \hat{4} \# \hat{5} \hat{6} \hat{7}$	
	Mixolydian-$\flat \hat{6}$ (5th mode Melodic Minor) $\hat{1} \hat{2} \hat{3} \hat{4} \hat{5} \rightarrow \hat{6} \rightarrow \hat{7}$	

31.10 How to Determine Chord-Scale Relationships

To discover a chord-scale relationship for almost any chord, write all of the notes of the chord (including upper extensions and altered notes), then fill in the thirds with the most logical choices, *avoiding augmented seconds and consecutive half steps*.

In the example below, we determine the scale that best fits $G\Delta^7(\#11)$ by doing the following:

1. Identify the notes in the chord
2. Write all chord tones as a scale within the span of an octave
3. Fill in any gaps, avoiding augmented 2nds and consecutive half steps
4. Analyze the resulting scale

Identify notes in chord
G maj7($\#11$)

Write notes as scale within an 8ve span

Fill in gaps, avoiding aug. 2nds and consecutive half steps

Figure 31.10.1 How to Determine a Scale for a Chord

The G Lydian scale is the most correct scale to play over $G\Delta^7(\#11)$.

Principle 31.10.2 Determining Chord-Scale Relationships. *When constructing the scale, avoid augmented seconds and consecutive half steps*

31.10.1 List of Chord-Scale Relationships

Below is a list of common chord-scale relationships. When there are two scales listed for a single chord, it is because the chord has a minor third that can be filled with half step then whole step *or* whole step then half step. This knowledge of chord-scale relationships ultimately becomes second nature to an improvising jazz musician.

Table 31.10.3 List of Chord-Scale Relationships

CHORD	CORRESPONDING SCALE(S)
$C\Delta^7$	C major scale or C Lydian scale
$C\Delta^7(\sharp 11)$	C Lydian scale
$C\Delta^7(\sharp 5)$	C Lydian-Augmented scale
Cm^7	C dorian scale or C natural minor
$C^{\circ 7}$	C locrian scale or C locrian $\sharp 2$
$C^{\circ 9}$	C locrian $\sharp 2$
$C^{\circ 7}$	C Octatonic Whole-Half
$Cm\Delta^7$	C melodic minor ascending
Cm_9^6	C Dorian or C melodic minor ascending
C^7	C Mixolydian
$C^7(\sharp 11)$	C Lydian-Dominant
$C^7(\sharp 5)$	C Whole Tone scale
$C^7(\flat 5)$	C Whole Tone scale
$C^7(\flat 9)$	C Octatonic (Half-Whole)
$C^7(\sharp 9)$	C Octatonic (Half-Whole)
$C^{13}(\sharp 11, \flat 9)$	C Octatonic (Half-Whole)
$C^7 \text{ alt}$	C Diminished-Whole Tone

This list is not exhaustive. Follow the process above (“How to Determine Chord-Scale Relationships”) for chords not listed in this list.

Additionally, it is often important to look at the relationship of a chord to the overall key of a tune to determine the appropriate scale. For example, the $Fmin^7$ at the beginning of “All The Things You Are” by Jerome Kern is the vi^7 chord in $A\flat$ major, in which case it would be inappropriate to play an F Dorian scale because the $D\sharp$ would conflict with the $D\flat$ in the key signature. One would play an F natural minor (or Aeolian) scale instead.

31.11 Harmonizing the Bebop Scale

In *The Jazz Theory Book*, author Mark Levine provides a method for harmonizing the **bebop major** scale ($\hat{1} - \hat{2} - \hat{3} - \hat{4} - \hat{5} - \sharp\hat{5} - \hat{6} - \hat{7} - \hat{8}$) with four voices.

Try singing through each part—soprano, alto, tenor, then bass.

Figure 31.11.1 Four-Part Harmonization of the Bebop Scale in Major

Figure 31.11.2 Four-Part Harmonization of the Bebop Scale in Minor

Notice that all of the non-tonic chords are $vii^{\circ 7}$ chords in various inversions.

One hears a similar approach to harmonizing a scale (though without the fully-diminished seventh chords as passing chords) in the following example.

YT: tnLK5lMY97s

Figure 31.11.3 Count Basie and His Orchestra, “London Bridge is Falling Down”

31.12 Practice Exercises

Jazz Theory: Day One

- Given the following lead-sheet symbols, write the chords. Remember it is sometimes appropriate to enharmonically respell notes like C^b , B^\sharp , F^b , E^\sharp and altered notes like $\sharp 5$ and $\sharp 9$.

1. $G^9 \text{ sus}$
2. $B7(\sharp 5)$
3. $E m^9(b5)$
4. $C^\sharp m^{11}$
5. $D7^b9_{b5}$

6. $G m^{\Delta 9}$
7. $A^b \Delta 9(\sharp 11)$
8. D^b_9
9. $E^b \Delta 9(\sharp 5)$
10. $F \Delta 7(b5)$

Jazz Theory: Day Two

- Label the following chords using jazz chords symbols.

1. _____
2. _____
3. _____
4. _____
5. _____

6. _____
7. _____
8. _____
9. _____
10. _____

Jazz Theory: Day Three

- Voice lead the following progressions. Remember to spell notes enharmonically when necessary. In the first example, use “close” voicing, keeping all the upper notes as close together as possible. In the second example, use Root–3rd–7th or Root–7th–3rd always for the lowest three voices, then realize the rest of the lead sheet symbol with the upper two parts (“spread” voicing). Use Root–3rd–6th for 6th chords and Root–4th–7th for sus chords. You may need to omit the 5th to maintain five parts throughout.

Two systems of piano accompaniment for jazz chords. The first system contains D \flat 9, C7 \sharp 9, F13sus, B13sus, and E maj9(13). The second system contains A7 \sharp 9, E \flat 7(\sharp 9), G9(13), F \sharp 9sus, and C \sharp m9. Each chord is represented by a whole note in both the treble and bass staves.

Jazz Theory: Day Four

4. Please name the following scales.

1. _____ 2. _____

3. _____ 4. _____

5. _____ 6. _____

5. Please write the following scales.

1. E Lydian-Dominant 2. B \flat Phrygian-Dorian

3. F Diminished-Whole Tone 4. E \flat Octatonic (Whole-Half)

Jazz Theory: Day Five

6. List the appropriate scale for the each chord by writing the chord tones then filling in the gaps. Avoid writing consecutive half steps and augmented seconds when constructing the scale.

1. E \flat 7(\sharp 5); Scale: _____

2. $B\flat_5^{7\sharp 9}$; Scale: _____

3. $Fm^{7(b5)}$; Scale: _____

4. $A\flat^{7(\sharp 5)}$; Scale: _____

Chapter 32

Impressionism and Extended Tonality

32.1 Impressionism

Impressionism is associated with Claude Debussy and Maurice Ravel in France, Ottorino Respighi in Italy, Charles Tomlinson Griffes in America, and Frederick Delius in England. We will focus on just three techniques found in the music of Debussy and Ravel: (1) the use of modes, (2) the use of upper extensions above the 7th in chord construction in tertian harmonies (9ths, 11ths, and 13ths, which we saw in the chapter on jazz), and (3) parallelism, also known as “planing.”

1. *Use of modes.* Composers such as Debussy and Ravel sometimes wrote in the church modes (Phrygian, Lydian, etc.—see [Scales](#)) as an alternative to the heavily chromatic music of Richard Wagner (listen to the influential [Prelude to Act I](#) of Wagner’s *Tristan und Isolde*).
 - (a) The first movement of Debussy’s String Quartet in G minor, Op. 10, begins in Phrygian mode. Notice that the seventh chord that occurs on the $\hat{5}$ scale degree is half-diminished in Phrygian. (The penultimate chord in this example is not in Phrygian mode.)

g: i v^o4₃ III v^o4₃ v^o6₅ i v^o4₃ i III bII⁷(b5) i

YT:

Figure 32.1.2 Debussy, *Dances*, II. Danse profane

- (c) The first movement of Ravel's *Piano Trio* Ravel begins in the Dorian mode. Notice that the penultimate chord is outside of the mode.

YT:
yiaGAWuY2PE

Figure 32.1.3 Ravel, *Piano Trio*, I.

- (d) At the end of the first movement of Ravel's *Piano Trio*, Ravel transforms the theme by placing it in the Lydian mode. In this example, the final two chords are outside of the Lydian mode.

YT:
yiaGAWuY2PE

Figure 32.1.4 Ravel, *Piano Trio*, I.

2. *Use of upper extensions in chords.* Debussy and Ravel used chords containing ninths, elevenths, and thirteenth, sometimes with chromatic alterations to those upper extensions.

- (a) In bar 15 of Debussy's "Clair de lune" from his *Suite bergamasque*, Debussy uses an $E^b m^9$ chord with the 9th of the chord in the melody.

Figure 32.1.6 Debussy, *Préludes*, Book II, No. 3, La Puerto del Vino

- (c) In bar 70 of the same piece, Debussy also includes the $\sharp 11$ in the right hand, in addition to the $\sharp 9$ and $\flat 9$.

YT:
PuLpFaE9ZW0

Figure 32.1.7 Debussy, *Préludes*, Book II, No. 3, La Puerto del Vino

3. *Use of parallelism* (also known as “planing”). In contrast to the [prohibition against parallel fifths and octaves in traditional voice leading](#), both Debussy and Ravel would take a chord voicing and move all voices in parallel motion.

- (a) In *Pavane pour une infante défunte*, Ravel writes dominant 9th chords in parallel motion in bar 27.

YT:
GEUpQ5pCS0Q

Figure 32.1.8 Ravel, *Pavane pour une infante défunte*

- (b) At 5 bars after rehearsal number 5 in *Prelude to the Afternoon of a Faun*, Debussy writes chromatically ascending dominant seventh chords.

YT:
9_7loz-HWUM

Figure 32.1.9 Debussy, *Prelude to the Afternoon of a Faun*

- (c) At 4 bars after rehearsal number 2 in the same piece, Debussy moves seventh chords in parallel motion. Notice that the chords are not all of the same quality.

Figure 32.1.10 Debussy, *Prelude to the Afternoon of a Faun*

32.2 Pandiatonicism

Pandiatonicism refers to the use of all diatonic notes without the need for scale degrees or harmonies to progress or function tonally (V doesn't need to progress to I, $\hat{7}$ doesn't need to resolve to $\hat{8}$, etc.). One often hears it as a wash of notes from the major scale, or as chords made of non-traditional combinations of notes from a major scale, often with at least one interval of a 2nd in a chord voicing.

In the first example, notice how Stravinsky creates a wash of sound from the notes of the major scale.

YouTube: <https://www.youtube.com/watch?v=XkM4bKjggKo>

Figure 32.2.1 Stravinsky, *Petrushka*, Fourth Tableau: *The Shrovetide Fair (Toward Evening)*

In the second example, Copland uses non-traditional pandiatonic chord shapes in non-functional harmonic progression.

YouTube: https://www.youtube.com/watch?v=WVahuS9hk_s

Figure 32.2.2 Copland, *Appalachian Spring*

The third example is similar to the first, with Copland creating a wash of sound from the notes of the major scale, with no regard to the dissonant intervals occurring in counterpoint.

YouTube: https://www.youtube.com/watch?v=WVahuS9hk_s

Figure 32.2.3 Copland, *Appalachian Spring*

32.3 Quartal, Quintal, and Secundal Harmony

Quartal harmony refers to chords stacked entirely (or mostly) in fourths. **Quintal harmony** refers to chords stacked entirely (or mostly) in fifths. **Secundal harmony** refers to chords stacked entirely (or mostly) in seconds. Contrast these concepts with the tertian (stacked in thirds) harmony we've encountered in the majority of this text. Alternative methods of stacking chords became more common after 1900 as composers sought ways to innovate and break with the past.

The next three examples demonstrate quartal harmony.

The following is an extended example of quintal harmony.

YouTube: <https://www.youtube.com/watch?v=IfOJCKN148M>

Figure 32.3.4 Bartók, Piano Concerto No. 2, II.

32.4 Polychords

A **polychord** typically consists of two triads sounding simultaneously. A polychord could also consist of two seventh chords, or a seventh chord and triad. Additionally, a polychord could conceivably consist of more than two triads or seventh chords, since the prefix “poly” means “many.”

Perhaps the most famous polychord is the “Rite of Spring chord,” an $E\flat^7$ chord sounding over an $F\flat$ major chord, which occurs during the “Dance of the Adolescents.”

$$\frac{E\flat^7}{F\flat}$$

YouTube: https://www.youtube.com/watch?v=BKo0_3-I1dw

Figure 32.4.1 Stravinsky, *Rite of Spring*, “Dance of the Adolescents”

Polychords are notated using a horizontal line between the chords instead of a slash. (The slash was used for [slash chords](#).)

$$\frac{A\flat}{A}$$

← (horizontal line means
chord over chord)

$$A\flat/A$$

↖ (slash means chord
over bass note)

Also note that it is not necessary to specify the inversion of each of the chords in the polychord.

In the example below, Copland voices an A major chord below an E major chord.

YouTube: https://www.youtube.com/watch?v=WVahuS9hk_s

Figure 32.4.2 Copland, *Appalachian Spring*

In the example below, features chromatically ascending dominant seventh chords in the left hand against a repeating three-chord cycle of G–F–C in the right hand.

32.5 Practice Exercises

Day One

1. *Use of modes.* Given the melody and chord symbols for “London Bridge” in Phrygian mode, analyze the chords as lead-sheet symbols (“LSS”) and as Roman numerals (“RN”).

LSS:

RN:

2. *Use of parallelism.* Harmonize the opening of “London Bridge” so each note of the melody note is the 9th of a dominant ninth chord.

LSS: F⁹ _ _ _ _ _

Day Two

3. *Quartal, Quintal, and Secundal Harmony.* After analyzing the given chord as a lead-sheet symbol, revoice it in four ways:
- (a) as a six-note tertian chord stacked only in thirds
 - (b) as a six-note quartal chord stacked only in perfect 4ths
 - (c) as a six-note quintal chord stacked only in perfect 5ths
 - (d) as a six-note secundal chord stacked only in 2nds

LSS: _ (1) in 3rds (2) in 4ths (3) in 5ths (4) in 2nds

4. *Polychords.* Harmonize “London Bridge” using the specified polychords. Remember that the chords can be in any inversion, but should be playable (i.e., without too big of a stretch for the hands of the pianist).

$\frac{D\flat}{C\flat}$	$\frac{E\flat+}{D\flat}$	$\frac{B\flat}{E\flat}$	$\frac{Cm}{A}$	$\frac{D}{B\flat}$	$\frac{C\flat}{F}$	$\frac{Dm}{Gm}$
-------------------------	--------------------------	-------------------------	----------------	--------------------	--------------------	-----------------

Chapter 33

Set Theory

33.1 Set Theory

Set theory is the analytical technique we will use to analyze expressionist music. The primary composers associated with expressionism are Arnold Schoenberg (1874–1951), Anton Webern (1883–1945), and Alban Berg (1885–1935). In this text, we will associate **atonal music**—music that avoids traditional harmonies and scales—with expressionism. Instead of scales and chords, intervals are the building blocks of Expressionist music. Although composers began writing atonal music in 1908, there was no widely-accepted systematic analytical approach that could show relationships between different pieces until Allen Forte published his seminal *The Structure of Atonal Music* in 1973, in which Forte applied set theory mathematics to music. However, our approach to normal form and prime form will follow the slightly-modified approach set out by John Rahn in his *Basic Atonal Theory* (1980), which is the approach followed by Joseph Straus in his well-known and widely-used *Introduction to Post-Tonal Theory*.¹

33.1.1 Atonal Music

Listen to the following example by Anton Webern.

YouTube: <https://www.youtube.com/watch?v=ELAKF8ZxDmg>

Figure 33.1.1 Webern, 5 movements for string quartet, No. 3. *Sehr bewegt*

Gone are the triadic structures we have studied throughout this text. In this music, intervals are paramount. Let us examine the intervals we find.

¹Of the 208 sets that exist, only 6 are different between the Forte and Rahn methods for prime form. See https://www.mta.ca/pc-set/pc-set_new/pages/pc-table/packed.html.

Look at the intervallic structure of the first two chords,² not including the C \sharp in the cello part. We see the interval of an augmented 5th below the interval of a minor 3rd in the first chord, and the interval of a minor sixth below the interval of a minor 3rd in the second chord. Notice that the names we use for intervals carry tonal implications. An augmented 5th would function differently than a minor 6th, but in atonal music, these intervals have the same sound, are separated by the same number of half steps, and have no tonal implications (they don't have to resolve any particular way). Therefore, analysts like Allen Forte used integers to represent pitches and intervals to remove the tonal implications of staff notation.

33.1.2 Integer Notation for Pitches

One notable trait of set theory is that we will represent pitches with integers, as seen in the table below.

Note name:	C	C \sharp /D \flat	D	D \sharp /E \flat	E	F	F \sharp /G \flat	G	G \sharp /A \flat	A	A \sharp /B \flat	B
Integer:	0	1	2	3	4	5	6	7	8	9	10	11

It may be helpful to remember that the C major triad (C, E, and G) consists of integers 0, 4, and 7.

Integer notation of pitches means we assume **enharmonic equivalence** of notes. For example, D, C \sharp , and E \flat are all represented as pitch integer 2. We also assume **octave equivalence**, which itself presumes the notion of **pitch class**. When we say Beethoven's first symphony is in C, we refer not to any specific C (C₁, C₂, C₃, etc.), but to the concept of the pitch class C, which includes any and all Cs. Therefore, you would label the note C as pitch class 0, no matter the register in which it occurs.

33.1.3 Integer Notation for Intervals

We will also measure intervals using integers, with each interval represented by the number of **semitones** (half steps) it contains. The following table contains the number of semitones in each interval.

²Some authors call atonal chords "sonorities" to differentiate them from chords in the traditional triadic sense; we will continue to use "chord" in this text.

Table 33.1.2 Interval Integers

Interval	Number of Semitones	Interval	Number of Semitones
m2	1	P5	7
M2	2	m6	8
m3	3	M6	9
M3	4	m7	10
P4	5	M7	11
TT	6	P8	12

33.1.4 Pitch-Class Sets

In atonal music we will analyze sets of pitch classes, hence the term “pitch-class set analysis.” Let us return to the example by Webern, this time with integers for pitches and for intervals.

pitch-class numbers

11 2 3

8 semitones 3 semitones 8 semitones

The first chord consists of E♭, B, and D, or pitch integers 3, 11, and 2. If we examine the intervallic distance, we find 8 semitones between pitch integers 3 and 11, and 3 semitones between 11 and 2. Note that we are working in a modulo 12 system, meaning we restart our numbering after 11 (0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 0, 1, 2, 3, etc.). We are used to modulo 12 thinking since we all deal with clocks. If a meeting ran from 11am to 2pm, it lasted 3 hours. Therefore, an interval from pitch integer 11 to pitch integer 2 spans 3 semitones. The second chord has the same intervallic construction.

Now, let’s look at the two chords in the second half of the third measure.

9 0 3

9 semitones 4 semitones 8 semitones

We see right away that the second of these chords has the same construction as the two chords we examined the in earlier examples (a minor 6th below a minor 3rd). However, the first chord in this example (G♯, C, A, or 8, 0, 9) appears to be different, with a diminished 4th from G♯ to C (an interval spanning 4 semitones, enharmonically equivalent to a major 3rd) below the interval of a major 6th from C to A (spanning 9 semitones). To see the relationship of this chord to the others, we need to learn about normal form and prime form.

33.2 Normal Form

Normal form represents the notes of a pitch-class set (as they occur in the music) in their most compact form.

To determine normal form, follow these steps:

1. Put the notes of a pitch-class set from a piece of music in ascending numeric order (like a scale). Eliminate any duplicate pitches.

2. Examine every possible ascending “scale” ordering of the notes until you find the most compact form—that is, the one that spans the smallest interval from lowest to highest note.

Ascending numeric order:

3. In the event that two orderings have the same interval span from lowest to highest note, choose the set that has the smaller interval between the first and penultimate notes.¹

Measure first to penultimate note to break the tie:

4. In the event of an absolute tie, choose the set that begins on the smaller number. We will use a different set of pitches to demonstrate a complete tie. The normal form for the notes below is [2, 3, 8, 9].

In the event of an absolute tie, choose the set beginning on the smaller number.

¹The Forte method for determining prime form would have measured from first to second note to break the tie instead of first to penultimate note, which is method used Rahn's *Basic Atonal Theory*.

5. Normal form is written in square brackets with commas. The normal form found in step 3 above was [11, 2, 3, 7].

33.3 Prime Form

Whereas normal form deals with the exact pitches as they occur in the music, **prime form** is usually a transposition and possibly an inversion of the normal form to its most essential form, much in the way an E \flat major triad in second inversion belongs to the category “major triad,” or a G 7 /F belongs to the more general idea “dominant seventh chord.” Perhaps because of the primacy of C in music theory—many ideas are demonstrated in their relation to the C major scale—all prime forms are transposed to and start on C (pitch integer 0).

Following is the process for determining prime form.

1. Transpose the normal form—[11, 2, 3, 7] from the normal form example in the previous section—so it starts on C (pitch integer 0): 0, 3, 4, 8

2. Invert the transposed normal form (what went up now goes down).

3. Write this inverted form in ascending form (4, 8, 9, 0), then do one of the following:

- (a) If there were no ties when determining normal form, proceed to the step 4.
- (b) If there were ties, put this inverted version through every ascending “scale” ordering to determine which is the most compact form from first note to penultimate note. In the example below, we see that the second ordering (the “tie loser” from normal form) is the most compact of the reorderings of the inverted normal form.

4. Compare the normal form (transposed to 0) to the most compact inverted form (transposed to 0). The most compact form is the prime form. Prime form is written in parentheses with no commas: (0148).

Normal Form transposed to 0 most compact inverted form of normal form most compact *inverted* form of Normal Form transposed to 0

Compare: Most compact version is **Prime Form**

- (a) In the event the prime form reaches pitch integers 10 or 11, use T for 10 and E for 11; for example (013568T)

33.3.1 Application of Normal Form and Prime Form

Let's determine normal form and prime form of the first set from the Webern excerpt.

The first chord contained E \flat , B, and D (3, 11, and 2).

most compact form
(Normal Form)

The normal form is [11, 2, 3]. Below is the calculation to determine prime form.

Normal Form Normal Form transposed to 0 inverted

most compact inverted version of Normal Form

Normal Form transposed to 0 most compact inverted version of Normal Form most compact *inverted* version transposed to 0

Compare: most compact form is Prime Form

The prime form is (014).

Now let's determine the normal form and prime form for the third set we encountered: G \sharp , C, and A, or 8, 0, and 9.

9 8 9 0

most compact is
Normal Form

The normal form is [8, 9, 0].

In the example below, we transpose the normal form to zero, then invert it.

8 9 0 0 1 4 0 11 8

Normal Form Normal Form transposed to 0 → inverted

In the following example, we put the inverted normal form through the reorderings to find the most compact form, then compare it to the normal form.

8 11 0 11 0 8 0 8 11 0 3 4 0 1 4

most compact inverted version transposed to 0 Normal Form transposed to 0

Compare: most compact version is Prime Form

We see that the third set has the same prime form—(014)—as the other sets in the opening measures of Webern's Op 5, No. 3. Prime form can allow us to see relationships that may not be apparent on the surface of the music.

33.3.2 Segmentation

What about the C \sharp in the cello part? Should it be included with the three notes from the chords? Will another similarity be revealed? **Segmentation** is the term for “segmenting” or determining which notes to group together and analyze in a passage. Usually, segmentation is based on the music—notes sounding together as a chord, or notes in a melodic line. However, analysts may look at every possible combination of notes to search for deeper layers of connection.

Below, we examine the first two chords with the C \sharp included in each.

10 semitones 11 semitones 11 semitones (most compact) 4 semitones

[11, 1, 2, 3]
Normal Form

0 2 3 4

NF transposed to 0 → inverted

inverted form ascending

inversion transposed to 0

Compare: most compact version is Prime Form

The prime form of the first set, when including the $C\sharp$ from the cello, is (0124).

Here is the second chord with the $C\sharp$ added to it.

11 semitones

(most compact) 6 semitones

9 semitones

11 semitones

[7, 10, 11, 1]

Normal Form

0 3 4 6

NF transposed to 0 → inverted

inverted form ascending

inversion transposed to 0

Compare: most compact version is Prime Form

The prime form of the second set, when including the $C\sharp$ from the cello, is (0236).

We do not see any relationship between these first two sets after including the $C\sharp$ with each three-note set. One doesn't know this until one examines this new segmentation.

33.4 Interval Vector

An **interval vector** (also known as “Interval Class Content”) is a list of every possible interval occurring in a pitch-class set. Calculating an interval vector is rather straightforward. First, after determining normal form, measure from the first note to all the other notes. Second, measure from the second note to all higher notes (not back or down to the first note). Continue measuring from each successive note to the notes following and you will have completed the interval vector.

Before demonstrating this, it is important to discuss the term “interval class.” An **interval class** (abbreviated “ic”) is the shortest distance between two notes measured in semitones. In the example below, C up to A is a major 6th. However, the shortest distance between C and A (measure downward) is a minor 3rd. Therefore, the largest interval class is 6 (the tritone), because any perfect 5th (for example, from C to G) has an interval class of 5 (a perfect 4th) because C *down* to G is a perfect 4th.

Major 6th Minor 3rd
(shortest distance
between C and A) Perfect 5th Perfect 4th
(shortest distance
between C and G)

With this in mind, let's complete an interval vector of the a half-diminished 7th chord on G. First, arrange the notes in ascending order, then measure from the first note to the second, third, and fourth notes.

m7=ic2
°5=ic6
m3=ic3

Interval Class:	1	2	3	4	5	6
Occurrences	0	1	1	0	0	1

Second, measure from the second note to the third and fourth notes. We add one tally each for interval class (ic) 3 and 5.

P5=ic5
m3=ic3

Interval Class:	1	2	3	4	5	6
Occurrences	0	1	2	0	1	1

Finally, measure from the third note to the fourth note, and the interval vector will be complete. We add one tally for ic4; the complete interval vector is 012011, which tells us a half-diminished chord has zero half steps, one major 2nd (shown in this voicing as a minor 7th), two minor 3rds, no major 3rds, one perfect 4th (shown in this voicing as perfect 5th), and one tritone.

M3=ic4

Interval Class:	1	2	3	4	5	6
Occurrences	0	1	2	1	1	1

An interval vector always contains 6 digits. When an interval class does not occur (the way the minor second did not occur in the G half-diminished seventh chord), place a zero in the column for that interval class.

33.5 Forte Numbers

When Allen Forte created a catalog of every possible 3-, 4-, 5-, 6-, 7-, 8-, and 9-note set in Appendix 1 of *The Structure of Atonal Music*, he labeled each prime form with two numbers separated by a hyphen. His labels (3–1, 3–2, etc.) are now known as “Forte numbers,” and are seen in the tables in the [Lists of Set Classes](#), which include prime forms and interval vectors as well.

33.5.1 Z-Relations

“Z” in a set label (for example, 4–Z29) stands for “zygotic” (“twinned”), and is used when different prime forms (for example, 4–Z29 and 4–Z15 have the same interval vector—111111).

33.6 Lists of Set Classes

Below are lists of all set classes with prime form, Forte number, and interval vectors shown. Allen Forte published the original list of set classes in *The Structure of Atonal Music* in 1973. These lists use prime forms as calculated using the Rahn method. Prime forms of sets are ordered from most packed to the left to least packed to the left, as is found in the list of set classes in both John Rahn’s *Basic Atonal Theory* and Joseph Straus’ *Introduction to Post-Tonal Theory*. Sets are listed across from their **complements**. When taken together, complements can complete the 12-note chromatic scale when correctly transposed (and sometimes inverted).

Table 33.6.1 List of Set Classes for 3- and 9-note sets (Trichords and Nonachords)

Prime Form	Forte Number	Interval Vector	Prime Form	Forte Number	Interval Vector
(012)	3–1	210000	(012345678)	9–1	876663
(013)	3–2	111000	(012345679)	9–2	777663
(014)	3–3	101100	(012345689)	9–3	767763
(015)	3–4	100110	(012345789)	9–4	766773
(016)	3–5	100011	(012346789)	9–5	766674
(024)	3–6	020100	(01234568T)	9–6	686763

33.7 Transposition (T_n)

Transposition is an operation performed as T_n , where n is the number of semitones *up* a set is transposed. For example, $[1, 2, 4, 6]$ at T_4 is $[5, 6, 8, 10]$.

⁵Forte prime form for 6-Z29: (013689)

⁶Forte prime form for 6-31: (013589)

all notes transposed up 4 semitones (T_4)

[1 2 4 6] [5 6 8 10]

When working in a modulo 12 system, remember that numbers larger than 12 have to be reduced to a number smaller than 12 by subtracting 12 from the larger number. For example, 6, 8, 10, 11 at T_9 would result in 15, 17, 18, 20, which, after subtracting 12 from each number, results in 3, 5, 6, 8.

Table 33.7.1

Pitch classes:		6	8	10	11
at T_9 :	+	9	9	9	9
Result:		15	17	18	20
Make numbers modulo 12:	–	12	12	12	12
Result:		3	5	6	8

33.8 Inversion ($T_n I$)

Inverting a set using $T_n I$ is a compound operation. The first step is to invert each note below C using C as an axis. For example, E is a major 3rd above C, so E would invert to A^\flat , a major third *below* C.

M3 above C inverts to M3 below C at $T_0 I$

C is axis of
inversion at $T_0 I$

The second step of inversion is to apply the T_n interval. So, to calculate $T_3 I$ for the note E, one would first invert E to A^\flat (this is $T_0 I$), *then* transpose the A^\flat up 3 semitones to B. (Theorist Joseph Straus simplifies the nomenclature to I_n instead of $T_n I$, but the outcome remains the same.)

Let's try inverting a pitch-class set, applying $T_7 I$ to [2, 4, 5] (or D, E, and F). Inverting the notes to the opposite side of C using C as an axis yields pitch numbers 10, 8, and 7 (or B^\flat , A^\flat , and G), which in ascending order is 7, 8, and 10. Then transposing [7, 8, 10] at T_7 raises each note 7 semitones, resulting in [2, 3, 5] (or D, E^\flat , and F).

pitches: 5 4 2 inverts to 10 8 7 Then transpose:
 int.: P4↑ M3↑ M2↑ M2↓ M3↓ P4↓ [7 8 10] at T_7 = [2 3 5]

C is axis of
inversion at $T_0 I$

Therefore, [2, 4, 5] at $T_7 I$ = [2, 3, 5]

33.8.1 Identifying $T_n I$ for Inversionally-Related Sets

To determine n of $T_n I$ for two inversionally-related sets, write the second set backward and add the notes of the two sets together. Each sum will equal n . Let's use our two sets from the previous example above: [2, 4, 5] and [2, 3, 5].

Table 33.8.1

First set in order:	2	4	5
Second set backward:	+	5	3
n of $T_n I$:		7	7
		7	7

This confirms the sets are related at $T_7 I$.

33.9 Practice Exercises

Day One

- Put each set into normal form and prime form.

(a) 

(b) 

(c) 

(d) 

(e) 

(f) 

(g) 

Day Two

- For each of the six sets in the example below, determine the normal form, prime form, Forte number, and interval vector.

Day Three

3. Transposition (T_n) of Sets. Transpose the following sets as specified.
- (a) Transpose $[3, 6, 7]$ at T_2 : [__ , __ , __]
 - (b) Transpose $[2, 4, 8, 9]$ at T_7 : [__ , __ , __ , __]
 - (c) Transpose $[1, 2, 4, 7, 8]$ at T_9 : [__ , __ , __ , __ , __]
4. Inversion ($T_n I$) of Sets. Invert the following sets. Write your answers in normal form.
- (a) Invert $[7, 10, 11]$ at $T_0 I$: [__ , __ , __]
 - (b) Invert $[0, 2, 4]$ at $T_4 I$: [__ , __ , __]
 - (c) Invert $[4, 6, 10, 11]$ at $T_9 I$: [__ , __ , __ , __]
5. Specify the interval of inversion from the first set to the second set.
- (a) $[2, 4, 7]$ inverts to $[3, 6, 8]$ at what $T_n I$?
 - (b) $[1, 2, 4, 7]$ inverts to $[4, 7, 9, 10]$ at what $T_n I$?
 - (c) $[6, 7, 10, 1, 2]$ inverts to $[3, 4, 7, 10, 11]$ at what $T_n I$?

Chapter 34

Serialism

Serialism is a term that encompasses the twelve-tone technique of Schoenberg, Webern, and Berg, who were the major figures we associated with expressionism and atonality in the previous chapter on set theory. We will begin by discussing classic twelve-tone serialism before discussing non-twelve-tone serialism.

34.1 Twelve-Tone Technique

YouTube: https://www.youtube.com/watch?v=bQHR_Z8XVvI

Figure 34.1.1 Arnold Schoenberg, Suite for Piano, Op. 25

In a twelve-tone composition, every note can be accounted for as being a member of the original series or one of its permutations, providing unity to the piece as a whole. Additionally, a twelve-tone series is a repository of intervals and can be seen as an outgrowth of atonal music with its emphasis on interval over chord or scale. The basic premises of twelve-tone music are as follows:

1. All twelve notes of the chromatic scale must occur
2. No note can be repeated in the series until the other 11 notes of the chromatic scale have occurred (exceptions include direct repetition of a note, trills, and tremolos)
3. The series can be inverted, retrograded, and the inversion can be retrograded
4. The order of notes in a series remains fixed, without reordering.

34.1.1 Row Forms

A twelve-tone series is also commonly called a twelve-tone “row,” and we will use the term “row” throughout this chapter.

The four types of row forms used in twelve-tone technique are prime (P), retrograde (R), inversion (I), and retrograde inversion (RI). The **prime** is the original row. The **retrograde** is the prime form backward. The **inversion** is the original row with all intervals in the row inverted (going in the opposite direction of the original). Finally, the **retrograde inversion** is the inversion retrograded (and therefore might have more appropriately been labeled “inversion retrograded” since “retrograde inversion” sounds like it refers to the backward form inverted instead of the inverted form backward).

Prime (Original)	Retrograde = Prime backward
	
Inversion = Prime with intervals inverted	Retrograde Inversion = Inversion backward
	

34.1.2 Transposition Numbers

Each row form can be transposed to start on any note from the chromatic scale. We will use the same [pitch integers](#) as in set theory. For primes and inversions, we will use P and I accompanied by a pitch integer to specify the starting note. For example, P_0 is a twelve-tone row starting on C (pitch integer 0), P_3 is a twelve-tone row starting on E_b , and so forth. The same is the case for row forms like I_2 (starting on D), I_5 (starting on F), on so forth.

P_0 (0 means the row starts on C)	P_3 (3 means the row starts on E_b)
	
I_2 (2 means the row starts on D)	I_5 (5 means the row starts on F)
	

However, the retrograde (R) and retrograde inversion (RI) row forms use the pitch integer of the *last* note in the row to designate their transposition level. Therefore, R_1 ends on C^\sharp , and RI_7 ends on G.

R_1 (1 means the row ends on C^\sharp)	RI_7 (7 means the row ends on G)
	

34.2 Determining Row Forms

To determine a row form’s permutation and transposition, examine the intervallic composition of each row form. In the example below, each row statement

is based on the prime form of the row in the previous sections.

Let's examine the starting intervals of each row form.

In examining the first few notes in the upper staff in the short musical excerpt below, we see an ascending minor 3rd followed by a descending major 2nd. The only row form to start with these intervals is the retrograde. To determine the transposition number, we look at the last note (the 12th note) in the first measure in the upper staff (A^b), which gives us the transposition level (pitch integer 8), meaning this is R_8 . The second measure in the upper staff begins with a minor 3rd followed by an ascending major 2nd, making this a retrograde inversion. The 12th note in this measure is an E (pitch integer 4), making this RI_4 . In the first measure of the lower staff, we find a descending minor 2nd followed by a descending perfect 4th, making this I_{11} . Finally, the second measure in the lower staff begins on C^\sharp with an ascending minor 2nd followed by an ascending perfect 4th, making this P_1 .

The row forms are labeled in the example below.

34.3 Writing Row Forms

To write specified row forms from a given prime form, write all four versions of the row: P, R, I, and RI. Then, simply transpose the specified row form to the correct pitch, remembering that P and I forms start on the pitch integer (P_3 and I_3 would begin on E_b , for example) while R and RI forms *end* on the pitch integer (R_3 and RI_3 would end on E_b).

To write I_9 and RI_5 if given P_0 :

1. Write all four row forms (P, R, I, RI).

2. Transpose the specified row form to the correct transposition level.

- (a) In this example, transpose I_0 up 9 semitones (a major 6th) to begin on A (pitch class 9).

- (b) To write RI_5 , transpose RI_0 up 5 semitones (a perfect 4th) so the last note is F (pitch class 5).

34.4 Twelve-Tone Matrix

One tool analysts create to analyze a twelve-tone composition is a twelve-tone matrix, which shows all 48 row forms in a 12 by 12 grid. Below is a matrix for the row we've been dealing with in this chapter.

Table 34.4.1 Twelve-Tone Matrix

	I ₀ ↓	I ₁ ↓	I ₂ ↓	I ₇ ↓	I ₅ ↓	I ₂ ↓	I ₄ ↓	I ₃ ↓	I ₁₀ ↓	I ₉ ↓	I ₁₁ ↓	I ₈ ↓

P ₁₁ →	B	C	F	G ^b	E	D ^b	E ^b	D	A	A ^b	B ^b	G	←R ₁₁
P ₆ →	G ^b	G	C	D ^b	B	A ^b	B ^b	A	E	E ^b	F	D	←R ₆
P ₅ →	F	G ^b	B	C	B ^b	G	A	A ^b	E ^b	D	E	C [#]	←R ₅
P ₇ →	G	A ^b	D ^b	D	C	A	B	B ^b	F	E	G ^b	E ^b	←R ₇
P ₁₀ →	B ^b	B	E ^b	F	E ^b	C	D	D ^b	A ^b	G	A	F [#]	←R ₁₀
P ₈ →	A ^b	A	D	E ^b	D ^b	B ^b	C	B	F [#]	F	G	E	←R ₈
P ₉ →	A	B ^b	E ^b	E	D	B	C [#]	C	G	G ^b	A ^b	F	←R ₉
P ₂ →	D	E ^b	A ^b	A	G	E	F [#]	F	C	B	D ^b	B ^b	←R ₂
P ₃ →	E ^b	E	A	B ^b	A ^b	F	G	G ^b	D ^b	C	D	B	←R ₃
P ₁ →	D ^b	D	G	A ^b	G ^b	E ^b	F	E	B	B ^b	C	A	←R ₁
P ₄ →	E	F	B ^b	B	A	G ^b	A ^b	G	D	D ^b	E ^b	C	←R ₄
	↑RI ₀	↑RI ₁	↑RI ₂	↑RI ₇	↑RI ₅	↑RI ₂	↑RI ₄	↑RI ₃	↑RI ₁₀	↑RI ₉	↑RI ₁₁	↑RI ₈	

To construct a matrix, write the prime form from left to right in the top row, then write the inverted form from top to bottom in the left column.

Table 34.4.2

	I ₀ ↓												
P ₀ →	C	D ^b	G ^b	G	F	D	E	E ^b	B ^b	A	B	G [#]	←R ₀
	B												
	G ^b												
	F												
	G												
	B ^b												
	A ^b												
	A												
	D												
	E ^b												
P ₁ →	D ^b												
	E												
	↑RI ₀												

From there, you can write the transpositions of the prime form, given the starting notes in the left column. One would continue with each transposition of the prime form until the matrix is complete.

34.5 Row Form Presentation in Music

In a piece of music, twelve-tone rows may not be clearly presented. One manner of presentation is overlap, where the final note of one row is the starting note of the next row.

Figure 34.5.1 Twelfth note overlapping with first note in successive row statements

Rows may also be presented contrapuntally or harmonically. In the example below, the row is separated into three tetrachords and presented contrapuntally.

Figure 34.5.2 Two examples of tetrachords from a row presented contrapuntally

In the final example in this section, the two rows are presenting in melody-accompaniment texture, with P_0 containing the melody and R_0 occurring as chords.

An analyst would first attempt to find a clear presentation of a twelve-tone row somewhere in the composition in order to analyze harmonies.

34.6 Non-Twelve-Tone Serialism

Serialism also includes music that is not twelve-tone but does use a series of notes that maintains its order and employs inversion, retrograde, and retrograde inversion of the series. An example is found in Stravinsky's *Septet* from 1953.¹

¹See Erwin Stein, "Stravinsky's *Septet* (1953)." *Tempo*. Spring, 1954.

YouTube: <https://www.youtube.com/watch?v=ijSmRoPzMaY>

Figure 34.6.1 Stravinsky, Septet

Figure 34.6.2 Series from Stravinsky's Septet

Here is the series with pitch-class integers (abbreviated “pc” for pitch class), and without registral displacement. Arrows connect repeated notes.

Figure 34.6.3 Series from Stravinsky's Septet showing repeated pitches

We notice that B (pitch integer 11), A (9), G (7), F# (6), and G# (8) are repeated in the series, with A, G, and G# occurring three times each. Below is the normal form of the 8 pitch classes in the 16-note series.

Figure 34.6.4 Normal form of the 8 pitches in the series from Stravinsky's Septet

Such a series could imply E or A as a tonal center. Note that Stravinsky's Septet is not strictly serial but contains serial elements. Such an example shows us that serialism can be employed in ways other than the strict, original twelve-tone version.

34.7 Practice Exercises

Serialism: Day One

1. Given the prime form of the twelve-tone row in pitch integers, write the specified row forms in the staves below.

P_7 : 7 10 8 2 1 5 3 4 6 0 9 11 R_7

I_7 RI_7

(a) P_1

(b) R_4

(c) I_8

(d) RI_{10}

2. Given the prime form of a twelve-tone row, label the row forms and transpositions of the permutations given on the staves below.

P_{10}

(a) Row form: _____

(b) Row form: _____

(c) Row form: _____

Serialism: Day Two

3. Construct a 12 by 12 matrix for the prime form of the following twelve-tone row, given in pitch integers: 3, 7, 11, 1, 5, 0, 2, 10, 6, 4, 8, 9. Include labels for all row forms including all transposition levels (P_0 , R_3 , I_8 , RI_6 , etc.). Use note names in the matrix, not integers.

Table 34.7.1

	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓	I _↓

4. For the following excerpt, determine P_4 and identify each row form and statement. This example contains overlap.

5. Referring to the twelve-tone row used to construct the matrix in the practice exercise above (3, 7, 11, 1, 5, 0, 2, 10, 6, 4, 8, 9), find the normal form and prime form for each discrete three-note set from the row, and provide an interval vector for each.
- Set 1: 3, 7, 11. Normal form: _____ Prime form: _____
Interval vector: _____
 - Set 2: 1, 5, 0. Normal form: _____ Prime form: _____
Interval vector: _____
 - Set 3: 2, 10, 6. Normal form: _____ Prime form: _____
Interval vector: _____
 - Set 4: 4, 8, 9. Normal form: _____ Prime form: _____
Interval vector: _____

Chapter 35

Minimalism

The rise of minimalism in the 1960s was a significant development in art music. While four artists are typically associated with minimalism—La Monte Young (b. 1935), Terry Riley (b. 1935), Phillip Glass (b. 1937), Steve Reich (b. 1936)—we will focus on just two techniques in this chapter. The first, additive minimalism, is associated with the early minimalist pieces by Philip Glass. The second, phase shifting, is associated with Steve Reich.

35.1 Additive Minimalism

In Philip Glass's version of additive minimalism as found at the beginning of his composition *Two Pages* (1969), he adds a repetition of a pattern but subtracts the final note in the repetition. Each addition to the pattern is another repetition with the final note of the previous repetition subtracted, as can be seen in the example below. (Note: The music notation below is a transcription and analysis meant to show the additive process and is not necessarily how the music is written in the score.)

Pattern: 

Pattern: 

Pattern:

A + B + C + D

(D is C minus final note)

Figure 35.1.1 Glass, *Two Pages* (1969)

The following example from *Music in Fifths* (1969) clearly displays additive process on its own, but is just one of dozens of steps in an additive process.

Figure 35.1.2 Glass, *Music in Fifths* (1969)

To hear additive process in Glass's well-known *Einstein on the Beach*, listen to the following minute of music from Act 1, Scene 1, "Train." Each chord in a five-chord cadential progression is gradually lengthened by adding to the number of subdivisions given to each chord.

Figure 35.1.3 Glass, *Einstein on the Beach*

35.2 Phase Shifting

Minimalist composer Steve Reich conceived of phase shifting in his early work in tape music, noting that tape loops of slightly differing lengths containing the same idea went slowly out of phase and very gradually back into phase when they were repeated incessantly (see *It's Gonna Rain* from 1965 and *Come Out* from 1966). Reich applied this phase-shifting process to live performance in *Piano Phase* (1967), *Violin Phase* (1967), and *Clapping Music* (1972).

YouTube: <https://www.youtube.com/watch?v=lzkOFJMI5i8>

Figure 35.2.1 Reich, *Clapping Music* (1972)

Below is the basic twelve-note pattern of *Piano Phase* along with a video demonstrating the phase-shifting.

The image shows a musical staff with a treble clef, a key signature of one sharp (F#), and a 3/4 time signature. It contains a five-note pattern: D4, E4, F#4, G4, A4. Below this is a screenshot of a YouTube video player. The video is titled "Piano Phase" and is Part 1 of 8, composed by Steve Reich. The video shows two piano parts, Piano 1 and Piano 2, with Piano 2 gradually shifting out of phase with Piano 1. A "Result" section shows the two parts together. To the right of the video player is a QR code that links to the video.

YouTube: <https://www.youtube.com/watch?v=57TuvksMR70>

Figure 35.2.2 Reich, *Piano Phase* (1967)

During the phase-shifting process, one can think of the lower voices in the examples above as going through rotation. The example below shows rotation of a five-note pattern. The pattern rotates one note to the left, meaning the second note begins the pattern on the second line, the third note begins the pattern on the third line, etc., until the first note starts the pattern again to complete the phase-shifting process.

The image shows five musical staves, each with a treble clef and a 5/8 time signature. Each staff displays a five-note pattern (D4, E4, F#4, G4, A4) starting at a different point in the measure, illustrating the rotation of the pattern. The notes are numbered 1 through 5 below the staff to indicate their position in the sequence.

- Staff 1: 1 2 3 4 5
- Staff 2: 2 3 4 5 1
- Staff 3: 3 4 5 1 2
- Staff 4: 4 5 1 2 3
- Staff 5: 5 1 2 3 4

Figure 35.2.3 Rotation demonstrated with a five-note pattern

In a piece of music, the process would play out similar to the manner below, where one part maintains the original pattern while the second goes out of phase by continually rotating the original pattern one note to the left. In *Piano Phase*, Reich has the second pianist gradually increase in speed so the patterns go slowly out of phase, while in *Clapping Music*, Reich has the musicians change to the next rotation on the downbeat of a measure, without gradually speeding up.

Figure 35.2.4 A short phase-shifting process piece

One hears phase shifting in numerous works by Reich, including the second movement of his *Three Movements*.

YouTube: https://www.youtube.com/watch?v=XIuJ_my4_-k

Figure 35.2.5 Reich, *Three Movements*, II.

It is worth mentioning that composers like Stravinsky applied rotation to serialism, which Joseph Straus details in Chapter 6 of his *Introduction to Post-Tonal Analysis* (4th edition).

Appendix A

Answers to Practice Exercises

1 · Basic Concepts

1.6 · Practice Exercises

1.6.1. Answer. 1. A0, 2. F1, 3. D2, 4. G2, 5. B3, 6. E4, 7. A4, 8. G5, 9. A6, 10. B7

1.6.2. Answer. 1. E5, 2. D6, 3. F4, 4. G3, 5. A4, 6. E4, 7. G3, 8. A2, 9. E4, 10. E4, 11. G3, 12. C4

1.6.3. Answer. 1. $G^{\flat\flat}$ and E^\sharp ; 2. D^\sharp and $F^{\flat\flat}$; 3. G^* and $B^{\flat\flat}$; 4. G^{\flat} and E^*

2 · Major Scales and Key Signatures

2.4 · Practice Exercises

2.4.1. Answer. 1. D^{\flat} E^{\flat} F G^{\flat} A^{\flat} B^{\flat} C
2. A B C^\sharp D E F^\sharp G^\sharp

2.4.2. Answer. 1. A^{\flat} ; 2. A; 3. G; 4. E^{\flat} ; 5. F; 6. D; 7. C^\sharp ;
8. E; 9. B^{\flat} ; 10. D^{\flat} ; 11. F^\sharp ; 12. B; 13. C^{\flat} ; 14. G^{\flat}

3 · Minor Scales and Key Signatures

3.4 · Practice Exercises

3.4.1. Answer. 1. e^{\flat} ; 2. b; 3. c^\sharp ; 4. g; 5. f; 6. e; 7. b^{\flat} ;
8. f^\sharp ; 9. a^{\flat} ; 10. a^\sharp ; 11. d; 12. g^\sharp ; 13. c; 14. d^\sharp

3.4.4. Answer.

(a) f

(b) e^{\flat}

(c) E

(d) E^{\flat}

(e) a^\sharp

(f) C^{\flat}

(g) d^\sharp

4 · Basics of Rhythm

4.7 · Practice Exercises

4.7.1. Answer.

- (a) Compound Duple (or Compound Quadruple)
- (b) Simple Quadruple (or Simple Duple)
- (c) Compound Duple (or a fast Simple Triple)
- (d) Compound Triple
- (e) Compound Duple (or Compound Quadruple)

4.7.2. Answer.

- a. Time Signature: $\frac{12}{16}$; Meter: Compound Quadruple
- b. Time Signature: $\frac{3}{2}$; Meter: Simple Triple
- c. Time Signature: $\frac{3}{8}$; Meter: Simple Triple
- d. Time Signature: $\frac{4}{2}$; Meter: Simple Quadruple

4.7.3. Answer.

- 1. Dotted quarter note
- 2. Eighth note
- 3. Dotted eighth note
- 4. Half note

4.7.4. Answer.

5 · Intervals

5.6 · Practice Exercises

5.6.1. Answer.

- 1. 6, 2. 4, 3. 2, 4. 8, 5. 7

5.6.2. Answer.

- 1. m6, 2. M3, 3. M2, 4. P5, 5. m7, 6. +4

5.6.3. Answer.

- Upper notes: 1. D^b , 2. G^b , 3. A^\sharp , 4. B^\sharp , 5. F^b , 6. F^b

5.6.4. Answer.

- Lower notes: 1. G^\sharp , 2. A^\sharp , 3. F , 4. G^b , 5. F^\sharp , 6. B^b

6 · Triads

6.7 · Practice Exercises

6.7.1. Answer.

- 1. $A^{\sharp\circ}$, 2. $F_{\text{sus}4}$, 3. B^b+ , 4. D^b , 5. $E_{\text{sus}2}$

6.7.2. Answer.

- 1. BDF^\sharp , 2. $EG^\sharp B^\sharp$, 3. $A^b B^b E^b$, 4. $C^\sharp E^\sharp G^\sharp$, 5. DGA , 6. $FA^b C^b$

6.7.3. Answer. 1. Dm/F, 2. Gm/D, 3. $A^{\sharp\circ}/C^{\sharp}$, 4. F/A, 5. B^{\flat}/F , 6. Cm/G

6.7.4. Answer. (lowest to highest) 1. DGB, 2. $DF^{\sharp}B$, 3. $FA^{\flat}D^{\flat}$, 4. $B^{\flat}EG$

6.7.5. Answer. 1. $F^{\sharp}A^{\sharp}C^{\sharp}$, 2. $GB^{\flat}D^{\flat}$, 3. $A^{\flat}C^{\flat}E^{\flat}$

7 • Roman Numerals and Cadences

7.5 • Practice Exercises

7.5.1. Answer. 1. $F^{\sharp}m$, ii; 2. $D^{\sharp\circ}/F^{\sharp}$, ii $^{\circ}$ /3rd; 3. A, VII; 4. G, V; 5. Bm/F^{\sharp} , ii/5th

7.5.2. Answer. 1. C, $CE^{\sharp}G$; 2. G/D, DGB; 3. A° , $A^{\flat}CE^{\flat}$

7.5.3. Answer. a. “Columbia, the Gem of the Ocean”: 1. G, I; 2. D, V; 3. G, I; 4. C, IV; 5. G, I; 6. D, V; Cadence type = Half Cadence (HC)

b. “Could You Be Loved”: 1. D, I; 2. Bm, vi; 3. G, IV; 4. D, I; Cadence type = Plagal Cadence (PC)

8 • Seventh Chords

8.4 • Practice Exercises

8.4.1. Answer. 1. D^7 , V^7
 2. $G\Delta^7$, IV^{M7}
 3. $D^{\sharp\phi7}$, ii $^{\phi7}$
 4. Bm^7/D , iii $^7/3rd$
 5. $C^{\sharp\circ7}/E$, vii $^{\circ7}/3rd$

8.4.2. Answer. 1. Bm7, B-D-F $^{\sharp}$ -A
 2. $A^{\phi7}$, A-C-E $^{\flat}$ -G
 3. $C^{\sharp\phi7}$, C $^{\sharp}$ -E-G-B
 4. G^7 , G-B $^{\flat}$ -D-F
 5. $Emaj^7/G^{\sharp}$, G $^{\sharp}$ -B-D $^{\sharp}$ -E

8.4.3. Answer. a. “No Scrubs”: 1. $D^{\flat}m^7$, iv 7 ; 2. $A^{\flat}m$, i; 3. $E^{\flat7}$, V^7 ; 4. $A^{\flat}m$, i

b. Mozart: 1. C, I; 2. G^7/D , $V^7/5th$; 3. C, I; 4. F/C, IV/5th; 5. C, I; 6. G^7/B , $V^7/3rd$; 7. C, I; Cadence type: Authentic Cadence (AC)

9 • Harmonic Progression and Harmonic Function

9.9 • Practice Exercises

Day One 9.9.1. Answer. In F major:

1. F-A-C
2. IV = B $^{\flat}$ -D-F
3. vii $^{\circ}$ = E-G-B $^{\flat}$
4. iii = A-C-E
5. vi = D-F-A
6. ii = G-B $^{\flat}$ -D
7. V = C-E-G
8. F-A-C

In B minor:

1. B-D-F \sharp
2. iv = E-G-B
3. VII = A-C \sharp -E
4. III = D-F \sharp -A
5. VI = G-B-D
6. ii $^\circ$ = C \sharp -E-G
7. V = F \sharp -A \sharp -C \sharp
8. B-D-F \sharp

9.9.2. Answer. 1. A \flat , 2. A \sharp , 3. D, 4. C \sharp , 5. G, 6. G

9.9.3. Answer. 1. 4 flats in key signature, iv, B \flat -D \flat -F
 2. 3 sharps in key signature, IV, D-F \sharp -A
 3. 3 flats in key signature, ii $^\circ$, F-A \flat -D
 4. 4 sharps in key signature, vi, C \sharp -E-G \sharp
 5. 2 flats in signature, vii $^\circ$ 7, F \sharp -A-C-E \flat
 6. 5 sharps in key signature, V7/5th, C \sharp -E-F \sharp -A \sharp
 7. 1 flat in key signature, i/3rd, F-A-D
 8. 1 flat in key signature, iii, A-C-E

9.9.4. Answer.

9.9.5. Answer. HC = V

DC = V-vi

PC = IV-I

AC = V-I

9.9.6. Answer.

In F major:

1. F, I
2. Dm, vi
3. Gm/B \flat , ii/3rd
4. C, V

In E major:

1. C \sharp m, vi
2. A, IV
3. E, I
4. B, V

9.9.7. Answer.

	D	F \sharp m	Bm7	Em7/G	A	D
D:	I	iii	vi7	ii7/3rd	V	I
FUNCTION:	ton.	ton. prol.	ton. prol.	pre-dom.	dom.	ton.

Cadence: AC

10 · Non-Chord Tones

10.13 · Practice Exercises

10.13.1. Answer.

<i>Non-Chord Tone Type</i>	<i>Approached by</i>	<i>Left by</i>
<i>RETARDATION</i>	same tone	step up
<i>ESCAPE TONE</i>	<i>STEP</i>	leap in opposite direction
<i>PASSING TONE</i>	step	step in same direction
<i>APPOGGIATURA</i>	leap	<i>STEP</i>

10.13.2. Answer. Lead-sheet: B^b, Dm, E^b, F
Rom. num.: I, iii, IV, V

10.13.3. Answer. a. “Stop! In the Name of Love” example

Lead-sheet symbols: Am, G/B, F, G

Roman numerals: vi, V/3rd, IV IVM7, V

Measure 2: 7-6 suspension in voice part and in right hand of piano, appoggiatura in left hand of piano

Measure 3: 9-8 suspension (or incomplete neighbor) in voice part and right hand of piano

Measure 4: 6-5 suspension in voice and right hand of piano

b. Robert Schumann example

Pickup measure: appoggiatura in right hand of piano;

Measure 1: appoggiatura in left hand of piano; 7-6 suspension, appoggiatura in right hand of piano; Roman numeral: iv/3rd

Measure 2: appoggiatura in right hand; Roman numeral: V7

Measure 3: anticipation, appoggiatura in voice part; appoggiatura in right hand; Roman numeral: ii/3rd, V7, Lead-sheet symbol: E7

Measure 4: 4-3 suspension; appoggiatura in right hand; Roman numeral: I, Lead-sheet symbol: A

12 · Form in Popular Music

12.6 · Practice Exercises

12.6.1. Answer. She’s Out of My Life:

- 0:00–0:40, Introduction, approx. 4 bars of keyboard
- 0:40–1:25, A, 12 bars
- 1:25–2:05, A, 11 bars
- 2:05–2:35, B, 8 bars
- 2:35–3:33, A, 13 bars

Penny Lane:

- 0:00–0:20, Verse 1, 8 bars
- 0:20–0:38, Verse 2, 8 bars
- 0:38–0:54, Chorus, 8 bars

24 · Binary and Ternary Forms**24.9 · Practice Exercises****24.9.1. Answer.**

$A: a \quad a'$
 $G: HC \quad m. 4 \quad D: PAC \quad m. 8$
 $B: b \quad c \quad d$
 $e: PAC \quad m. 12 \quad G: HC \quad m. 16 \quad PAC \quad m. 20$

TWO-REPRISE SECTIONAL CONTINUOUS ROUNDED **BALANCED** **BINARY** TERNARY

24.9.2. Answer.

$A: a \quad a'$
 $A: HC \quad m. 4 \quad PAC \quad m. 8$
 $B: b \quad a'$
 $HC \quad m. 12 \quad PAC \quad m. 18$

**24.9.3. Answer.****24.9.4. Answer.**

Two-Reprise Continuous Ternary, if looking at the proportion, or Two-Reprise Continuous Rounded Binary, if you interpret the first two notes in bar 13 as being built from the first two notes in bar 1—and if you are considering that Mozart, as a Classical-era composer, is likely to compose a rounded binary. Two-Reprise Continuous Balanced Binary is a label that describes that the endings of the halves are the same, but doesn't take into account the return of the opening material in bar 21.

24.9.5. Answer.**24.9.6. Answer.**

Two-Reprise Sectional Rounded Binary (because the motives from the first section are used in the construction of the melody of the second section)

25 • Sonata and Rondo Forms

25.6 • Practice Exercises

25.6.1. Answer.

- (a) Haydn: Expository

- (b) Beethoven: Developmental

34.7.4. Answer.

34.7.5. Answer.

- (a) Set 1: 3, 7, 11. Normal form: [3, 7, 11] Prime form: (048) Interval vector: 000300
- (b) Set 2: 1, 5, 0. Normal form: [0, 1, 5] Prime form: (015) Interval vector: 100110
- (c) Set 3: 2, 10, 6. Normal form: [2, 6, 10] Prime form: (048) Interval vector: 000300

- (d) Set 4: 4, 8, 9. Normal form: $[4, 8, 9]$ Prime form: (015) Interval vector: 100110

Appendix B

GNU Free Documentation License

Version 1.3, 3 November 2008

Copyright © 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.
<<http://www.fsf.org/>>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

0. PREAMBLE. The purpose of this License is to make a manual, textbook, or other functional and useful document “free” in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of “copyleft”, which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS. This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The “Document”, below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as “you”. You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A “Modified Version” of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A “Secondary Section” is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The “Invariant Sections” are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The “Cover Texts” are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A “Transparent” copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not “Transparent” is called “Opaque”.

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The “Title Page” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.

The “publisher” means any person or entity that distributes copies of the Document to the public.

A section “Entitled XYZ” means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as “Acknowledgements”, “Dedications”, “Endorsements”, or “History”.) To “Preserve the Title” of such a section when you modify the Document means that it remains a section “Entitled XYZ” according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers

are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING. You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY. If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS. You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if

there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.

- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- K. For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.
- N. Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.
- O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties — for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS. You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements".

6. COLLECTIONS OF DOCUMENTS. You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS. A compilation of the Document or its derivatives with other separate and independent

documents or works, in or on a volume of a storage or distribution medium, is called an “aggregate” if the copyright resulting from the compilation is not used to limit the legal rights of the compilation’s users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document’s Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION. Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled “Acknowledgements”, “Dedications”, or “History”, the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION. You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE. The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License “or

any later version” applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy’s public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING. “Massive Multiauthor Collaboration Site” (or “MMC Site”) means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A “Massive Multiauthor Collaboration” (or “MMC”) contained in the site means any set of copyrightable works thus published on the MMC site.

“CC-BY-SA” means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

“Incorporate” means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is “eligible for relicensing” if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.

ADDENDUM: How to use this License for your documents. To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (C) YEAR YOUR NAME.

Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled “GNU Free Documentation License”.

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the “with... Texts.” line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
